UNDERSTANDING AND ANALYSIS OF FINANCIAL STATEMENTS

UNIT 1	
Preparation and Analysis of Final Accounts	5
UNIT 2	
Construction and Analysis of Fund Flow and Cash Flow Statements	30
UNIT 3	
Ratio Analysis	.52

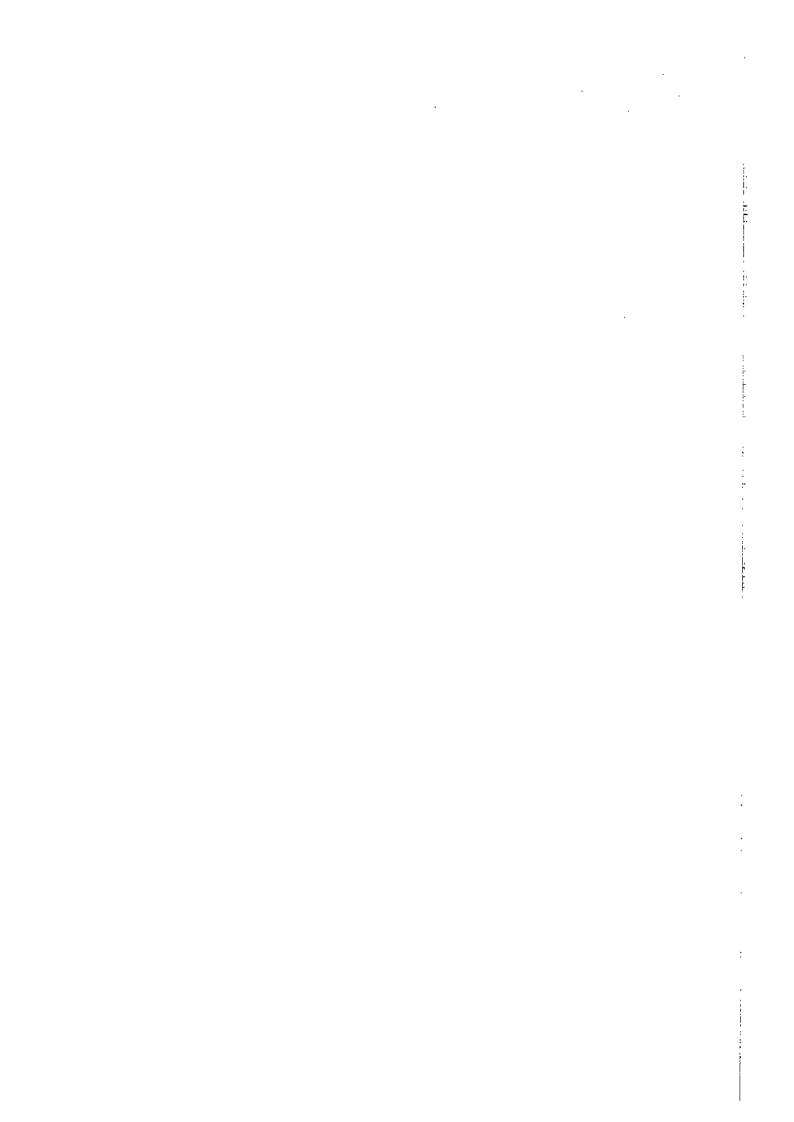

BLOCK INTRODUCTION

This block introduces some basic financial statements of a universal character. The purpose is to develop your comprehension and analytical ability about them. This block has three units.

The first unit discusses final account, its conceptual basis and construction. The classification of various items which usually appear on final account is also presented after which the items are discussed.

The second unit deals with the construction and analysis of funds flow and cash flow statements. The sources and applications of funds are explained with suitable illustrations.

The last unit explains the different types of ratios stating their importance and uses in an organisation.

1.0 INTRODUCTION

The primary function of accounting is to accumulate accounting data in order to calculate the profit and loss made by the business firm during and also to understand the financial position of the business on a given date. A business can ascertain this by preparing the Final Accounts. Preparation of final accounts from a trial balance is the final phase of the accounting process. Final accounts include the preparation of Trading and Profit and Loss Account and the Balance Sheet, although the Balance Sheet is not an account but only a statement. Trading and Profit and Loss Account is simply one account which is usually divided into two sections. The first section is called the Trading Account and the second section the Profit and Loss Account. In case of manufacturing concerns, Final Accounts also include the Manufacturing Account.

1.1 OBJECTIVES

After going through this unit, you should be able to:

· define Final Account;

~~~<u>~~</u>

- understand their objectives and preparation of Trading and Profit and Loss Account;
- conclude the difference between Trading Account and Profit and Loss Account,
   Gross Profit and Net Profit;
- understand and explain the terms used in a balance sheet;

- apply simple principles of valuation of assets;
- role of depreciation in valuation and determining the proper profit of a firm;
- · understand Adjustment entries; and
- the importance of adjustment entries to ascertain the financial position of a business firm.

#### 1.2 TRADING ACCOUNT

Trading account is prepared to ascertain the Gross Profit and Loss of a firm, where Gross Profit is the excess of net revenue over cost of goods sold (the credit side of the trading account exceeds the debit side). Similarly, Gross Loss is the excess of cost of goods sold over net revenue (the debit side of the trading account exceeds the credit side).

Gross Profit = Net Sales Revenue - Cost of Goods Sold Gross Loss = - (Net Sales Revenue - Cost of Goods Sold)

Where:

Net Sales Revenue = Cash Sales + Credit Sales - Sales Returns

Cost of Goods Sold = Opening Stock + Net Purchases + Direct Expenses - Closing Stock

Net Purchase = Cash Purchases + Credit Purchases - Purchases Returns.

Trading Account is generally prepared in 'T' form. In this case, opening stock, purchases and direct expenses are shown on the debit side and sales and closing stock on the credit side of the trading account. The format of the Trading Account is explained along with the format of Profit and Loss Account.

#### 1.2.1 Opening/Closing Stock

The Opening Stock of goods is the stock of goods in hand at the beginning of an accounting year. This may include stock of raw material, work-in-progress and fininshed goods. This appears in the debit column of the trial balance. In the Trading Account this is the first entry on the debit side. The valuation is usually done at cost or market price which ever is lower. The Stock of goods in hand at the end of accounting year is called Closing Stock. Similarly, closing stock may include stock of raw material, work-in-progress and finished goods. The closing stock is shown on the credit side of the Trading Account. Closing stock is usually not given in the trial balance but is given by way of additional information.

#### 1.2.2 Net Purchases

These include goods purchased only for production and selling purposes. Goods used as assets and not- for- sale are not included in this head. Net purchase is the difference between purchases and the purchase return, where purchase is the sum of cash and credit purchase. Note that sometimes, purchased return is known as Return Outward.

#### 1.2.3 Direct Expenses

Direct expenses include all those expenses incurred in bringing the goods to the place of business or trade or in-production process until the goods are placed in a saleable position. The following expenses may be considered as direct expenses:

1. Wages paid to workers engaged in production are debited to the trading account provided the manufacturing account is not prepared separately.

Preparation and Analysis of Final Accounts

.

- Carriage/freight inwards are transportation expenses incurred to bring the goods
  or raw material to the place of the business or to the firm's godown/factory. Such
  expenses, whether paid or outstanding, are debited to trading account.
- Octroi is paid when goods enter municipal limits. Octroi paid on goods purchased
  is a direct expense and is debited to trading account.
- Custom duty paid on importing goods for selling purposes is debited to trading account. If the duty is paid on sales export, it amounts to selling expenses and is shown in the profit and loss account.
- Factory rent, insurance, lighting & power and heating are the expenses
  incurred to convert raw material into finished goods. Such expenses are debited to
  trading account.

#### 1.2.4 Net Sales

It includes both cash and credit sales of goods. From this figure of total sales, sales return (also called Returns Inward), if any, is deducted in the inner column and the net sales amount is shown in the outer column on the credit side of the Trading Account. Sales of assets are not credited to the Trading Account. It should be noted, if goods have been sold but not yet dispatched, these should not be shown under sales but are included in closing stock if the property/ownership in the goods has not passed to the customer. But if the property/ownership in the goods has passed to the customer goods sold but not yet dispatched it will not be included in closing stock but will be treated as sales.

Following is the proforma of the Trading Account:

Trading Account For the Year Ended

| Debit                  |     |                           | Cred |

#### Illustration 1

Prepare the Trading Account from the following details:

Opening stock Rs.25,000: Purchases Rs. 80,100; Carriage Inward Rs. 12,000; Stock at the end Rs. 15,000; Carriage Outward Rs. 2,000; Office Rent Rs. 5,000; Sales Rs. 1,40,000; Sales Return Rs. 2,000; Purchases Return Rs. 100.

#### Solution

#### Trading Account For the year ending

|                            |                                                                                                                 | •                                                                                                    |
|----------------------------|-----------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------|
| 25,000<br>80,000<br>48,000 | Net sales: Sales 1,40,000 Less: Sales Return 2,000  Closing Stock: Raw Material Work-in-Progress Finished Goods | 1,38,000<br>15,000                                                                                   |
| 1,53,000                   |                                                                                                                 | 1,53,000                                                                                             |
|                            | 80,000<br>48,000                                                                                                | Sales 1,40,000 Less: Sales Return 2,000  Closing Stock: Raw Material Work-in-Progress Finished Goods |

#### Check Your Progress 1

1) Prepare the Trading Account from the following figures:

| Opening Stock   | 40,000   | Power        | 6,000    |
|-----------------|----------|--------------|----------|
| Purchases       | 1,80,000 | Octroi       | 11,000   |
| Carriage Inward | 4,000    | Freight      | 8,000    |
| Wages           | 42,000   | Sales        | 3,20,000 |
| Return Outwards | 7,000    | Sales Return | 10,000   |

Closing Stock Rs. 60,000.

- 2) How is Purchases different from Net Purchases?
- 3) How are Net Sales different from Sales?

#### 1.3 PROFIT AND LOSS ACCOUNT

Profit and Loss Account is prepared in order to discern whether the firm has made net profit or suffered net loss for a given accounting period. This account deals with indirect expenses such as administrative, selling and distribution expenses and the like. Profit and Loss Account starts where trading account ends; in other words it starts with gross profit on the credit side brought forward from the trading account. In case of gross loss brought forward from the trading account, profit and loss account begins with gross loss as the first item on the debit side.

All the indirect/running expenses, incurred on selling and distribution of the goods and the general administration of the business, are listed on the debit side while all the items of income and gain are listed on the credit side. When the credit side (revenue) exceeds the debit (expenses) side, the difference is not profit. But, if the debit side exceeds the credit side, the difference is not loss. Profit and loss account is balanced by transferring net profit to the capital account(s) in the balance sheet and net profit thus increases the capital; the net loss is deducted from the capital account(s) in the balance sheet and thus decreases the capital.

The following items are debited in the profit and loss account:

1. Administrative Expenses including Office Salaries, Office Rent, Office Lighting, Printing, Director's Fees, Telephone Rent, Postage, Insurance, etc.

- Sales and Distribution Expenses including Salesmens salary, Commission, Travelling expenses, Advertising, Packing expenses, Royalty, etc.
- Preparation and Analysis of Final Accounts
- Financial Expenses including Interest on loan/Capital, Cash Discount Allowed, Bad Debts, Bank Charges, etc.
- Depreciation of Assets and various provisions.
- 5. Other Expenses and Losses including Loss on Sales of Fixed Assets, Loss by Fire, by Theft, by Accident, etc.
- 6. Taxes including Sales Taxes, Income Taxes etc.

The following items are credited in the Profit and Loss Account:

- Cash Discount Received
- 2. Interest Received
- 3. Rent Received
- 4. Gain on Sale of Fixed Assets'
- 5. Apprentice Premium
- 6. Dividend Received.

Note: The household and personal expenses of the proprietor paid by the firm do not appear in the profit and loss account. Rather these are treated as personal drawings of the proprietor and are deducted from the capital in the balance sheet.

The Following is the proforma of Trading and Profit & Loss Account:

### PROFIT AND LOSS ACCOUNT For the year ended...

| Debit                                                                                                                                                                                                                                         | •   |                                                                                                                                                                                                                       | Credit          |

# 1.4 DIFFERENCE BETWEEN TRADING AND PROFIT AND LOSS ACCOUNT

- Trading account is prepared in order to calculate gross profit/loss, while the function of the profit and loss account is to disclose net profit/loss.
- Trading account deals with the sales and cost of goods sold which includes direct expenses. But the profit and loss account deals with indirect expenses such as administrative and financial expenses and the same is charged against gross profit and other revenues.
- 3. The result of the trading account in the form of gross profit/loss is transferred to profit and loss account while the result of profit and loss account in the net profit/loss is transferred to capital account.

#### Check Your Progress 2

- List all the items debited or credited in the Profit and Loss account.
- Explain the difference between Trading Account and Profit & Loss Account.
- 3) Explain the difference between Gross Profit and Net Profit.
- 4) Prepare Trading and Profit and Loss Account for the year ended 2005.

| Particulars            | Dr. (Rs.) | Cr. (Rs.) |

| Bank Balance           | 20,000    |           |

Closing Stock Rs. 32,000.

#### 1.5 BALANCE SHEET

Balance sheet is concerned with reporting the financial position of an entity at a particular point in time. This position is conveyed in terms of listing all the things of value owned by the entity as also the claims against these things of value i.e. Liabilities. The position as represented by i.e., Assets. The balance sheet is valid only until another transaction is carried out by the entity.

The above statement can be claborated by an example:

I want to purchase a car costing Rs. 8,00,000. To do so, I have to borrow capital/money. A bank agrees to finance me if I can invests. 3,00,000 on my own.

Now let us follow the sequence of events when I approach the bank with the proposal. Granting my ability to repay the loan, the banker will ask two specific questions:

- I. What are the things of value you own?
- 2. How much do you owe, and to whom?

In other words, the banker would like to know what I am worth in material terms. My replies to the questions could be tabulated as follows:

| Claims against things of v | alue            | Things of value owned by                                   | me                                      |
|----------------------------|-----------------|------------------------------------------------------------|-----------------------------------------|
| Personal loan from friend  | Rs.<br>1,00,000 | Balance with bank Fixed deposits Other personal belongings | Rs.<br>3,50,000<br>1,50,000<br>5,00,000 |
| _                          | 1,00,000        |                                                            | 0,00,000                                |

This implies I own Rs. 10,00,000 worth things of value, Rs. 3,50,000 of this could be withdrawn at any time in cash. We say I have Rs. 3,50,000 in liquid form. Another Rs. 1,50,000 is in monetary investment and the remaining Rs. 5,00,000 is in non-monetary preperty. Further, I owe Rs. 1,00,000 to friend of mine. In other words, he has got a claim against the things of value owned by me to the extent of Rs. 1,00,000. In brief, we can say I am worth Rs. 10,00,000, claim against my worth is Rs. 1,00,000 and hence my net worth is Rs. 9,00,000. This implies Rs. 9,00,000 is my own claims against the things of value owned by me or my net worth.

Now I can present my financial position in the following form:

Financial Position Statement 1

| Amount owned by me                                  |                                    | Things of value owned by me                                |                                         |
|-----------------------------------------------------|------------------------------------|------------------------------------------------------------|-----------------------------------------|
| Personal loan from friend<br>Own claim or net worth | <b>Rs.</b><br>1,00,000<br>9,00,000 | Balance with bank Fixed deposits Other personal belongings | Rs.<br>3,50,000<br>1,50,000<br>5,00,000 |
| -<br>-                                              | 10,00,000                          | -                                                          | 10,00,000                               |

Now that the bank grants me the loan of Rs. 5,00,000 and I buy the car for Rs.8,00,000. After purchase of the car my financial position statement will change as follows:

#### Financial Position Statement 2

| Claims against things of value                                                 |                                         | Things of value owned -                                       |                                                   |
|--------------------------------------------------------------------------------|-----------------------------------------|---------------------------------------------------------------|---------------------------------------------------|
| Personal loan from friend<br>Mortgage loan from bank<br>Own claim or net worth | Rs.<br>1,00,000<br>5,00,000<br>9,00,000 | Balance with bank Fixed deposit Car Other personal belongings | Rs.<br>50,000<br>1,50,000<br>8,00,000<br>5,00,000 |
| -<br>-                                                                         | 15,00,000                               | -<br>                                                         | 15,00,000                                         |

Now, as a result of this transaction my worth has increased from Rs. 10,00.000 to Rs.15,00,000. However, since there is also an equal increase in claims against my worth in the form of mortgage loan from the bank, my net worth remains the same.

Preparation and Analysis of Final Accounts

Things of monetary value possessed by an entity are referred to as assets. Accountants use the term assets to describe things of value measurable in monetary terms.

The amount owed by an entity or individual which represent claims against it or his assets by outsiders are liabilities. It is the claims of outsiders which are legally enforceable claims against an individual or entity that are referred to as liabilities.

The assets owned by the entity, less liabilities or outsider's claims, is the net worth. Since the net worth represents the claims of owner(s) in case of an entity, it is referred to as owner's equity.

Now we can understand that the financial position statement is a summary of the assets, liabilities and net worth of a firm at a specific point in time.

#### 1.6 CONSTRUCTING A BALANCE SHEET

Having examined the conceptual basis of the balance sheet we will now try to study the balance sheet itself. We have seen that every transaction affects the financial position. Since it is not feasible to draw up a balance sheet after every transaction, it is prepared at the end of a specified period, usually, a year. This period is referred to as accounting period or fiscal year or financial year. This period as a convention has become one calendar year, though, there is no accounting justification for it.

Balance sheet preparation is the arrangement of the assets and liabilities of a firm in a proper or in a systematic way. The balance sheet as prepared at the end of the accounting period shows the year-end status of each of the assets of the firm and the various claims on these assets. We could also say that the balance sheet shows the year-end balance in the asset, liability and capital accounts. It may be clarified that there are two conventions of preparing the Balance sheet. The American and the English. According to the American convention, assets are shown on the left hand side and the liabilities and the owner's equity on the right hand side. The English convention is just the opposite. i.e., assets are shown on the right hand side of the Balance Sheet and the liabilities and the owner's equity on the left hand side. In India, generally the English conventions are followed. The format given below is the format of the balance sheet in the order of liquidity, i.e., ease of conversion of the assets into cash. The more liquid assets is shown first and then the less liquid one appear on the pro-forma. Similarly, on the liabilities side, current liabilities in order of payment are shown first, then fixed or long-term and lastly, the capital of the proprietor.

Balance Sheet as on \_

| Liabilities                                                                                                | Rs. | Assets                                                                                            | Rs. |
|------------------------------------------------------------------------------------------------------------|-----|---------------------------------------------------------------------------------------------------|-----|
| Current Liabilities Creditors Bills Payable Bank Overdraft Outstanding Expenses Income Received in Advance |     | Current Assets Cash in Hand Cash at Bank Stock-in-Trade Debtors Bills Receivable Prepaid Expenses |     |
| Fixed Liabilities<br>Loan<br>Mortgage<br>Capital                                                           |     | Fixed Assets Furniture and Fixtures Plant Machinery Land Goodwill                                 |     |

The assets of a business can also be shown in the balance sheet in order of permanence, i.e., in order of the desire to keep them in use.

| Liabilities                                                                                             | Rs. | Assets                                                                                                                       | Rs. |
|---------------------------------------------------------------------------------------------------------|-----|------------------------------------------------------------------------------------------------------------------------------|-----|
| Capital Mortgage Bank Overdraft Outstanding Expenses Income Received in Advance Creditors Bills Payable |     | Goodwill Patents and Trade Marks Furniture and Fittings Plant and Machinery Unexpired Expenses Stock-in-Trade Sundry Debtors |     |
| Loan                                                                                                    | ·   | Investments Bills Receivable Cash in Bank Cash in Hand                                                                       |     |

Now, let us examine how the ideas what we have learnt so far could be used in a business situation. Please recall that based on the entity principle we shall be dealing with the 'business' as distinct and separate from the owners. We shall demonstrate this by means of an illustration. Following is the Balance sheet of the above mentioned profit and loss account:

M/s. Naiña Balance Sheet as on 31st March, 2004

| Liabilities                                                                                  | Rs.                          | Assets                                          | Rs.                                              |
|----------------------------------------------------------------------------------------------|------------------------------|-------------------------------------------------|--------------------------------------------------|
| Capital 9,00,000<br>+ Net profit 1,25,000<br>- Drawings 35,000<br>Bills Payable<br>Creditors | 9,90,000<br>40,000<br>80,000 | Building<br>Machinery<br>Furniture<br>Debtors * | 60,000<br>8,00,000<br>60,000<br>50,000<br>50,000 |
| $x_{j}$                                                                                      | 11,10,000                    | Cash<br>Bills Receivable                        | 30,000<br>60,000                                 |

The following Accounting Concepts would enable us to evaluate the balance sheet:

- The dual aspect principle has particular relevance to balance sheet. As per this principal, every transaction is related as one which has dual effects and hence, it is recorded on debit side as well as credit side. Due to this, we ensure the equality of assets to liabilities and owner's equity.
- All the figures are expressed in monetary units irrespective of its nature. In our example we had cash, merchandise inventory and shop premises all expressed in monetary quantities.
- All the transactions we reflected were in respect of only the business entity, and as such, the balance sheet represents the financial position of the business entity and not that of the owners.
- All the valuations were based on the assumption of a going concern, and not based on liquidated value. As a consequence, the total value of the assets is written off over a period through a mechanism known as depreciation.
- All the assets were based on historical cost as the basis of valuation.

# 1.7 CLASSIFICATION OF BALANCE SHEET'S ITEMS

The balance sheet lists assets, liabilities and capital separately. It is an accepted convention that the assets and liabilities are shown into sub-groups and listed in the order of their liquidity/Permanence.

The balance sheet in our example/format is presented in the T account form. That is the assets are listed on one side and liabilities and owners' equity on the other.

Another commonly used way of presentation is the report form where liabilities and capital are listed above the assets. However, the presentation matters very little since the balance sheet represents the equality between assets, liabilities and capital.

#### Current Assets

Current assets are assets, which will normally be converted into cash within a year or within the operating cycle. The operating cycle is the duration in time taken by a unit to convert raw material into finished goods, plus time to sell it and finally, plus time to get cash from debtors to whom goods are sold. For example, in a simple trading operation, we use cash to buy merchandise and sell it to recover cash. The operating cycle in such a situation will consist of the period for which, merchandise inventory, and receivables are held. The cycle starts with cash and ends with the collection of cash. Current Assets are liquid and current liabilities can be met from the realisation of them.

#### Cash

Cash is usually taken to include currency (legal tender), cheques or any other document that circulates as cash. Cash is usually classified as a current asset when it is available for a firm's day-to-day operations. It includes cash kept in the cash chest as also deposits on call on current accounts with banks. If cash is specifically carmarked for any purpose and not available for transactions it is better classified as other assets.

#### Accounts Receivable

Accounts receivable are amounts owed to the company by debtors. This is the reason why we also use the term sundry debtors to denote the amounts owed to the firm. This represents amounts usually arising out of normal commercial transactions. In other words, 'accounts receivable' or sundry debtors represent unpaid customer accounts. In the balance sheet illustration these represent amounts owed to the firm by customers on the balance sheet date. These are also known as trade receivables, since they arise out of normal trading transactions. Trade receivables arise directly from credit sales and as such provide important information for management and outsiders. In most situations these accounts are unsecured and have only the personal security of the customer.

It is normal that some of these accounts default and become uncollectable. These collection losses are called **bad debts**. It is not possible for the management to know exactly which accounts and what amount will not be collected. However, based on past experience, it is possible for the management to estimate the loss on the receivable or sundry debtors as a whole. Such estimates reduce the gross value of accounts receivable to their estimated realisable value. For instance:

| Accounts Receivable                         | 7,50,000    |
|---------------------------------------------|-------------|
| Less: Estimated collection loss at 10%      | 75,000      |
|                                             | <del></del> |
| Net realisable value of accounts receivable | 6,75,000    |

The estimated collection loss is variously referred to as provision for doubtful debts, provision for bad debts or provision for collection losses.

It is a usual practice for debts to be evidenced by formal written promises to pay or acceptance of an order to pay. These formal documentary debts represent Promissory Notes, Receivable or Bills Receivable. These instruments used in trade are negotiable instruments and hence enable the trader to assign any of his/her receivables to another party or a bank for realising immediate liquidity.

It is also usual for accounts receivables to be pledged or assigned mostly to banks against short-term credits in the form of cash credits or overdrafts.

#### Inventory

In a trading firm, inventory is merchandise held for sale to customers in the ordinary course of business. In case of manufacturing firms, inventory would mainly consist of materials required to manufacture the products, namely, raw materials, materials remaining with the factory at various stages of completion i.e., work in process and goods ready for sale or finished goods. Apart from these there may be inventory of stores and supplies. Thus we have raw material inventory, work in process inventory, finished goods inventory and stores and supplies inventory.

It is common to refer to inventory as stock-in-trade and thus we could come across stock of raw materials, stock of work in process and stock of finished goods. Inventory is usually valued on the basis of "lower of cost or market price". Market price is taken to mean the cost of replacement either by purchase or by reproduction of the material in question. As a general principle, inventory cost includes all normal costs incurred to make the goods available at the place where it can be sold or used are, treated as costs of inventory.

In trading firms, inventory costs include freight-in, transit insurance costs, import or entry levies as also the invoice cost. Warehouse costs, handling costs, insurance costs in storage and interest costs are not included as costs. They are treated as expenses of a period of the firm.

Preparation and Analysis of Final Accounts

In case of manufacturing units, the valuation of inventory costs is more complex and involved. As a general rule all costs of materials, labour and plant facilities used for manufacturing the goods are included in the valuation of inventory.

In valuing inventory at lower of cost or market price, care should be taken to see that the valuation does not exceed the realisable value or selling price in the ordinary course of business.

#### Prepaid Expenses

In many situations, as a custom, some of the item of expenses are usually paid in advance such as rent, taxes, subscriptions and insurance. The rationale of including these prepayments as current assets is that if these prepayments were not made they would require use of cash during the period.

#### Fixed Assets

Fixed assets are tangible, relatively long-lived items owned by the business. The benefit of these assets are available not only in the accounting period in which the cost is incurred but over several accounting periods. Current assets provide benefits to the organisation by their exchange into cash. In the case of fixed assets, value addition arises by facilitating the process of production or trade. In other words, benefits from fixed assets are indirect rather than direct.

All man made things have limited life. In accounting we are concerned with the useful life of the assets. Useful life is the period for which a fixed asset could be economically used. This implies that the benefits from the fixed assets will flow to the organisation throughout its useful life. Another aspect of this is that the cost incurred in the period of purchase of the asset will be providing benefits over the useful life of the asset.

Valuation of the fixed assets is usually made on the basis of original cost. However, since assets have limited life the cost will be expiring with the expiration of the life. Thus, valuation of the asset is reduced by an amount proportionate to the expired life of the asset. Such expired cost is referred to as depreciation in accounting.

Fixed assets normally include assets such as land, building, plant, machinery and motor vehicles. All these items, with the exception of land, are depreciated. Land is not subject to depreciation and hence shown separately from other fixed assets.

#### Intangible and Other Assets

Intangible assets are assets or things of value without physical dimensions. They cannot be touched, they are incorporeal, representing intrinsic value without material being. One of the most common of these assets is **goodwill**. Goodwill reflects the ability of a firm to earn profits in excess of normal return. Almost all firms may have some goodwill. However, they appear in the books and balance sheet only when it has been purchased. Usually, when a going concern is purchased, the purchase price paid in excess of the fair value of the assets is considered goodwill. The amount is classified as another asset 'goodwill' on the balance sheet. Like fixed assets, the value of intangible assets should also be expired over a period of time. Such an expiration cost is called amortisation, similar to depreciation.

#### **Current Liabilities**

We have studied that liabilities are claims of outsiders against the business. In other, words, these are amounts owed by the business to people who have lent money or

provided goods or services on credit. If these liabilities are due within an accounting period or the operating cycle of the business, they are classified as current liabilities. Most of such liabilities are incurred in the acquisition of materials or services forming part of the current assets. As was the case with current assets, current liabilities are also listed in the order of their relative liquidity.

#### Accounts Payable

Accounts Payable or sundry creditors are usually unsecured debts owed by the firm. These are also referred to as payables on open accounts. They may not be evidenced by any formal written acceptance or promise to pay. They represent credit purchase of goods or services for which payment has not been made as on the date of the balance sheet.

#### **Accrued Liabilities**

Accrued liabilities represent expenses or obligations incurred in the previous accounting period but the payment for the same will be made in the next period. In many cases where payments are made periodically, such as wages, rent and similar items, the last month's payment may appear as accrued liabilities (especially if the practice is to pay the same on the first working day of a month). This obligation shown on the balance sheet indicates that the firm owed the said amount on the balance sheet date.

#### **Provisions or Estimated Liabilities**

Where the liabilities are known but the amounts cannot be precisely determined, we estimate the liability and provide for it as a liability. A common example is income tax payable. Unless the tax liability is determined the amount payable cannot be accurately determined. There could be other examples too, such as product warranty expenses to be met and so on. The common practice is to estimate these liabilities based on past experience and make a provision for the same which is shown as a part of liabilities.

#### Contingent Liabilities

Contingent liabilities should be distinguished from estimated liabilities. Estimated liabilities are known liabilities where the amount is uncertain. Contingent liabilities on the other hand are not liabilities at the current moment. They may become liabilities only on the happening of a certain event. In other words, both the amount and the liability (or obligation) are uncertain till the specified event occurs in future. These may include items like a claim against the company contested in a court. Only if the court gives an unfavourable verdict, it becomes a liability. They are not listed as liabilities in the body of the balance sheet. However, if the firm wishes, it may make same provision for the same.

#### Long-Term Liabilities

Long-term liabilities are usually for more than one year. They cover almost all the outsider's liabilities not included in the current liabilities and provisions. These liabilities may be unsecured or secured. Security for long-term loans, are usually the fixed assets owned by the firm assigned to the lender by a pledge or mortgage. All details such as interest rate, repayment commitment and nature of security are disclosed in the balance sheet. Usually, such long-term liabilities include debentures and bonds, borrowings from financial institutions and banks.

#### Capital

We have seen earlier in this unit that the fundamental accounting equality states: assets = liabilities + owners equity. From the example of balance sheet we can easily establish this. See Ms. Naina's balance sheet:

Total assets Rs. 1,00,00,000
Total liabilities Rs. 60,00,000
Owner's equity Rs. 40,00,000

We also know that the owner's equity consists of the contributed capital and the retained carnings of the firm. Therefore, capital is that part of owner's equity which is contributed by the owners. If Ms. Naina were an individual proprietorship business, the owner's equity will be reflected directly as:

Capital Rs 40,00,000

If 'M/s. Naina' were a partnership firm with four partners W, X, Y and Z all sharing equally, the capital would be represented as:

 Capital
 Partner W
 Rs. 10,00,000

 Partner X
 Rs. 10,00,000

 Partner Y
 Rs. 10,00,000

 Partner Z
 Rs. 10,00,000

 Total
 Rs. 40,00,000

#### Reserves and Surplus

Reserves and surplus or retained earnings normally arise out of profitable operations. It is a surplus not distributed by the firm as dividends. In other words, these are profits that are to be retained within the business. When a firm starts its operations it has no retained earnings. If in the first year it earns say Rs. 10,000 profit and decides to distribute Rs. 5,000 as dividends, the reserves and surplus at the end of the year will be Rs. 5,000. During its second year of operation if the firm makes a loss of Rs. 3,000 then the retained earnings at the end of the year will be Rs. 2,000. Retained earnings (or reserves and surplus) are in the nature of earned capital for the firm. We have seen earlier that the dividends are limited to retained earnings. This implies that at no point in time the original capital of the firm can be distributed as dividend. In other words, the capital originally contributed is to be maintained intact.

It is possible to allocate profits earned and accumulated as reserves or retained earnings to be earmarked for specific purposes. The earmarked reserves are not distributed. Only non-earmarked or free reserves are available for distribution as dividends.

| 9)        | We judge an item as a current asset if it is converted into cash during an                                                   |  |  |  |
| 10)       | Liquidity refers to nearness of an item to                                                                                   |  |  |  |
| 11)       | Items classified as current assets are usually listed in the order of their relative                                         |  |  |  |
| 12)       | The basis of valuation as applied to temporary investment is                                                                 |  |  |  |
| 13)       | Asset losses expected out of non-collection of receivables are called                                                        |  |  |  |
| 14)       | Formal written/documented debts refer to                                                                                     |  |  |  |
| 15)       | Items commonly referred to as inventory include (i), (ii) and (iii)                                                          |  |  |  |
| 16)       | Fixed Assets are valued on the basis of                                                                                      |  |  |  |
| 17)       | Balance sheet is a statement of                                                                                              |  |  |  |
| 18)       | represents the owners' claim against assets of a business.                                                                   |  |  |  |
| 19)       | are claims of outsiders against the business.                                                                                |  |  |  |
| 20)       | increase owners' equity.                                                                                                     |  |  |  |
| 21)       | Amounts owed by a business on account of purchase of inventory are usually called or                                         |  |  |  |
| 22)       | Amounts receivable by a firm against credit sales are usually called                                                         |  |  |  |
| 23)       | As a general rule all assets are valued at their to the business.                                                            |  |  |  |
| 24)       | Owner's equity could be understood as comprising two parts: and                                                              |  |  |  |
| -<br>[25] | The dual aspect principle ensures an important equality reflected by balance sheet                                           |  |  |  |
| ·26)      | All valuations specially those of fixed assets in a balance sheet are based on an important assumption about the entity as a |  |  |  |

#### 1.8 ADJUSTMENT ENTRIES

Accounts are prepared as per accounting concepts, conventions and principles. Since final accounts are prepared on accrual basis, it becomes necessary to subtract all those expenses, which are basically paid during the current financial year although applicable to other accounting period(s). And to add all those expenses, which benefit the current accounting period either the payment was made or not. Similarly in case of earnings subtract all those revenue items, received in the current accounting period but applicable to other accounting period (s). Add all those revenue items, which have been earned currently but not yet been received. The above stated corrections in the final account are called Adjustments, which are made with the help of adjusting entries. Adjustments ensure a proper matching of costs and revenue for obtaining correct profit or loss for the given accounting period.

Let us see the treatment and impact of some adjustments on final account,

منزور

#### 1.8.1 Closing Stock

The value of unsold stock. The stock is valued at cost or market price whichever is lower. Generally, the closing stock is not given in the trial balance but is given in adjustments. Closing stock will appear on the credit side of the trading account and will also appear on the assets side of the balance sheet.

#### 1.8.2 Depreciation

It is the amount charged because of the usage and passage of time. Fixed assets are used for earning revenue. Therefore, a decrease in their value is considered to be the operational expenses of business. In order to ascertain true profits and to show the true value of the assets in the balance sheet, depreciation has to be charged. Depreciation account is debited while individual asset account is credited and then the profit and loss account is debited and the while depreciation accounts is credited.

#### 1.8.3 Bad Debts

Bad debts are losses on account of uncollectable debts. When the amount due from debtors is irrecoverable, it is called bad debts. Bad debts, being loss are closed by transferring them to the debit side of the profit and loss account. The amount of bad debts is also deducted from debtors in the balance sheet. If the same appears in the trial balance, no adjustment entry is needed. In this case, debtors appear at their adjusted figure.

#### 1.8.4 Provision for Bad and Doubtful Debts

A provision should be made in advance for those debts whose recovery is doubtful and to writing off bad debts. All enterprises, based on their past experience, create a provision for doubtful debts to meet such a loss when it happens. This is done for the purpose of reflecting the debtors in the balance sheet at their true value. Provisions for bad and doubtful debts appear on the debit side of the profit and loss account and at the credit side of the provision for bad debts account.

#### 1.8.5 Outstanding Expenses (Liabilities)

Expenses are generally recorded only when they are paid. The failure to record an unpaid expenses in the accounts results in an understatement of that expense and also an understatement of a liability. In order to avoid understatement of these expenses and liabilitie, an adjustment entry is passed by debiting the expense account and, crediting the personal account of the party to whom such amount is to be paid. If outstanding expenses appear on the credit side of the trial balance, then they will be taken to the liability side of the balance sheet.

#### 1.8.6 Prepaid Expenses (Assets)

Expenses paid in advance of their use or consumption are known as prepaid expenses. At the end of the year, a part of the payment remains unconsumed and is treated as an asset, because its benefit is to be availed of in future. For prepaid expense, the adjustment entry is made by debiting prepaid expense account and crediting expense account. If this item appears on the debit side of the trial balance, it will be shown only on the assets side of the balance sheet. It will not appear in Profit &Loss Account at all.

#### 1.8.7 Accrued Income (Assets)

Accrued income is an amount earned but not actually received during the accounting period or till the date of preparation of final accounts for the period concerned. The first effect of accrued income is to credit the profit and loss account and to show the same in the assets side of the balance sheet.

#### 1.8.8 Income Received in Advance (Liability)

It is the income received but not earned during the accounting period. In other words, it is the income for which services are to be rendered in future. This income is deducted from the concerned income in the credit side of profit and loss account and is also shown as a liability in the balance sheet.

To see the impact of adjustment entries' on the final account (financial condition of the business firm) let's take the same illustration of Ms. Naina again only including the some common adjustments in it. And let us check its impact practically by comparing the transactions of both the illustrations (with or without adjustment entries).

#### Revised Illustration 2:

The following figures from the trial balance has been extracted from the books of M/s. Naina Prepare the Trading and Profit & Loss Account for the year ended 31 March 2004.

|                          | Debit (Rs.) | Credit (Rs.) |
|--------------------------|-------------|--------------|
| Drawings                 | 35,000      |              |
| Building                 | 60,000      |              |
| Debtors and Creditors    | 50,000      | 80,000       |
| Returns                  | 3,500       | 2,900        |
| Purchases and Sales      | 3,00,000    | 4,65,000     |
| Discount                 | 7,100       | 5,100        |
| Life Insurance           | 3,000       |              |
| Cash                     | 30,000      |              |
| Stock (Opening)          | 12,000      |              |
| Bad Debts                | 5,000       |              |
| Reserves for Bad Debis   |             | 17,000       |
| Carriage Inwards         | 6,200       |              |
| Wages                    | 27,700      |              |
| Machinery                | 8,00,000    |              |
| Furniture                | 60,000      |              |
| Salaries                 | 35,000      |              |
| Bank Commission          | 2,000       |              |
| Bills Receivable/Payable | 60,000      | 40,000       |
| Trade Expenses/Capital   | 13,500      | 9,00,000     |

#### Adjustment:

- 1. Stock on 31" March 2004 was valued at Rs. 50,000.
- 2. Depreciation of building 5%; furniture and machinery is 10% p.a.
- 3. Trade expenses Rs. 2,500 and wages Rs. 3,500 have not been paid as yet.

- 4. Allow interest on capital at 5% p.a.
- 5. Make provision for doubtful debts at 5%.
- 6. Machinery includes Rs. 2,00,000 of a machinery purchased on 31st December 2003. Wages include Rs. 5,700 spent on the installation of machine.

#### Solution

M/s. Naina Trading and Profit & Loss Account For the year ending on 31st March, 2004

| (–) Capital                |             | 5,06,500     |

#### Adjustment:

- 1. Stock on 31st March 2005 was valued at Rs. 42,000.
- 2. Rent is payable at the rate of Rs. 300 p.m.
- Insurance premium was paid for the year ending 30th June, 2005.
- 4. Interest on investment is payable half yearly on 30th June and 31th December.
- Write off further bad debts Rs. 5000. Also create a provision for doubtful debts
   10% on debtors and provision for discount on debtors @ 2%.
- 6. Create a reserve for discount on creditors @ 2%.
- 7. Provide for depreciation on fixed assets @ 10%.

Prepare the Trading and Profit and Loss Account for the year ended and Balance Sheet as on 31° March 2005.

- 6) On 31<sup>st</sup> March 2004 the following trial balance of Sanjeev Tomar was taken out. Prepare final account for the year after making the following adjustments.
  - 1. Depreciation: 5% of plant and machinery and 10% of fixtures and fittings.
  - 2. Reserve for bad debts 2.5% on Sundry Debtors
  - 3. Insurance unexpired on 31st March 2004 Rs. 70
  - 4. Outstanding wages Rs. 800 and Salaries Rs. 350.

#### 1.9 SUMMARY

Both the parts, Trading Account and Profit and Loss Account, of Final Account are interdependent on each other. Gross Profit/loss plays a very special role in the calculation of net Profit and loss figure. Trading and profit and loss account gives the true picture of an organisation by showing its revenues and expenses. This account is normally prepared at the end of the accounting period. Balance Sheet as we have seen is one of the most important financial statements. It is a periodic summary of the financial position of the business. It is the statement of assets, liabilities and owners' capital at a particular point in time. This statement in itself does not reveal anything about the details of the operations of the business. However, a comparison of two balance sheets could reveal the changes in business position. A realistic understanding of the operations of the business would require two other statements — Cash Flow Statement and Funds Flow Statement. We shall take them up in subsequent units.

#### 1.10 KEY WORDS

Asset: Anything, tangible or intangible, of monetary value to a business entity; something which a business entity owns.

Current Assets: All the assets held by a firm with the objective of conversion to cash within the operating cycle or within one year whichever is longer. Current Assets include items such as cash, receivables, inventory and prepayments.

Current Liabilities: All those claims against the assets of the firm to be met out of cash or other current assets within one year or within the operating cycle, whichever is longer. Usually include items such as accounts payable, tax or other claims payable, and accrued expenses.

Preparation and Analysis of Final Accounts

Contingent Liability: A liability which has not been recognised as such by the entity. It becomes a liability only on the happening of a certain future event. An example could be the liability which may arise out of a pending lawsuit.

Fixed Asset: Tangible long-lived asset. Usually having a life of more than one year. Includes items such as land, building, plant, machinery, motor vehicles, furniture and fixtures.

Intangible Assets: Any long-term assets useful to the business and having no physical characteristics. Include items such as goodwill, patents, franchises, formation expenses and copyrights.

Liability: Any amount owed by one person (the debtor) to another (the creditor). In a balance sheet all those claims against the assets of the entity, other than those of the owners.

Owner's Equity: It is the owner's claim against the assets of a business entity. It could be expressed as total assets of an entity less claims of outsiders or liabilities, including both contributed capital and retained earnings.

#### 1.11 SOLUTIONS / ANSWERS

#### Check Your Progress 1

- I) Gross Profit Rs. 86,000
- 2) Net purchase is the difference between purchases and the purchase return
- 3) Not sales is the difference between sales and the sales return

#### Check Your Progress 2

4) Gross Profit Rs. 30,000 and Net Profit Rs. 10,600

#### Check Your Progress 3

- 1) (a) accounting period (b) fiscal year (c) financial year
- 2) (a) asset (b) liability (c) capital
- 3) (a) current (b) property, plant (c) other
- 4) (a) current (b) long-term (c) shareholders.

#### Check Your Progress 4

- 1) Liquidity
- 2) (a) T account form (b) Report form
- 3) Is time taken by a unit to convert goods into sales and to collect money from debtors?
- 4) Lower of cost or market price
- 5) Sundry debtors

- 6) Depreciation
- 7) Amortisation
- 8) Accounts payable
- 9) Operating cycle or accounting year
- 10) Cash
- 11) Liquidity
- 12) 'Lower of cost or market price'.
- 13) Bad debts.
- 14) Promissory Notes receivable or bills receivable.
- 15) Raw material (ii) Work-in-Process (iii) Finished goods.
- 16) Historical cost, less Depreciation.
- 17) Assets, Liabilities and capital
- 18) Owners' equity
- 19) Liabilities
- 20) Profits
- 21) Accounts payable or sundry creditors
- 22) Accounts receivable or sundry debtor
- 23) Original cost
- 24) Contributed capital and retained earnings
- 25) Assets = Liabilities + Owner's Equity
- 26) Going concern.

#### Check Your Progress 5

- 4) a. Expense Account Dr. (It will go to trading or profit & loss A/c)
  To Outstanding Expenses Account
  - b. Depreciation Account Dr.

    To individual Asset Account

Profit and Loss Account Dr.

To Depreciation Account

- c. Bad Debts Account Dr.
  To Debtors Account
- 5) Gross Profit Rs. 62,000 and Net Loss Rs. 32,400
- 6) Gross Profit Rs. 62,000 and Net Loss Rs. 32,400
- 7) Balance Sheet total Rs. 1,19,366. Net Profit Rs. 2,554, Gross Profit Rs. 18,266.

#### 2.0 INTRODUCTION

Depending on the user's purpose, the term 'funds' may be used differently. Literally, it means a supply that can be drawn upon. In this sense it is used to mean cash, total current assets or working capital. We use it here in the sense of networking capital meaning total current assets less current liabilities.

Funds flow is used to refer to changes in or movement of current assets and current liabilities. This movement is of vital importance in understanding and managing the operations of a business.

We have seen in the unit dealing with balance sheet that every material transaction changes the position statement (or Balance Sheet). This, in other words implies a dynamic situation involving continuous movement of resources into the business, within the business and out of the business. The complexity of these flows increases with the increasing size and volume of business. Directly or indirectly, all these flows take place in business through the medium of funds and the same could be studied through the fund flow statement.

Funds in the form of cash and cash equivalents, in the right quantity are necessary for the smooth functioning of any business. The continuous movement of cash within the business and out of the business could be understood by studying the cash flow statement.

#### 2.1 OBJECTIVES

After going through this unit, you should be able to:

 understand the idea of funds flowing through a business in a dynamic situation appreciate the role of working capital in the operations of a business;

- understand the sources and uses of working capital as well as cash during an accounting period from the financial statements;
- understand and interpret changes in working capital and cash identifying the causes of these changes; and
- use the funds flow statement and the cash flow statement as analytical tools.

# 2.2 STATEMENTS OF CHANGES IN FINANCIAL POSITIONS (SCFP)

Preparation of funds statement, excludes all those inter-firm activities of the enterprise, which do not affect its net working capital. Consequently, many of its significant activities like exchange of one or more current item (non current asset or non-current liability) with any other non-current item remains altogether unreported. No trace can be found from the funds flow statement even for the partial or total acquisition of non-current items of an enterprise in consideration of shares or/and debentures of any magnitude. To incorporate all these 'inter-firm non-current exchange transactions', which may substantially influence future funds, an all-pervasive flow statement, termed statement of changes in financial position is constructed.

The Institute of Chartered Accountants of India's (ICAI's) Accounting Standards – 3 (AS3) defines SCFD as: A "Statement of changes in financial position" summarising, for the period covered by it, the changes in the financial position including the sources from which funds were obtained by the enterprise and the specific uses to which such funds were applied.

According to E.S.Hendrisen: one of the basic objections to the working capital concept of funds is that inter-firm transactions do not directly affect working capital and as such they are omitted from the funds flow statements. Thus, it does not provide correct or compete financial structure of the firm. A suggestive solution of the above stated problem is an all resources concept of funds, which would permit the inclusion of such transactions as the acquisition of property in exchange of stock or bonds, the receipt of property as a gift, and the exchange of non-current assets for other non-current items. (Accounting theory, 19877 Ed.p.250).

Similar to funds flow statement, SCFP is also prepared from financial data like income statement, balance sheet, etc., and related notes. There is no specific format prescribed for the preparation SCFP. Where SCFP is supposed to be most informative, in those circumstances, it should be:

- i) presented for each period for which the final accounts are prepared;
- 2) included as an integral part of the financial statements;
- specific about where funds are provided from or used in the operations of an enterprise; and they should be presented separately from other sources or uses of funds other than those of operations.

Thus, SCFP, is designed to report all the causes of changes in financial position of an entity during the period that result from its financing and investing activities with others. Besides explaining the inflows and outflows of funds, it also reveals non-current external exchange transactions, which do not directly affect working capital. It thus, improves the understanding of the operations and activities of an enterprise for the related period.

# 2.3 ANALYSING CHANGES IN WORKING CAPITAL

In understanding the financial statements of a company, one of the first steps involved is the study of the changes in the financial position of the company and the reasons for the changes. We make an attempt at studying these changes and their causes by using the data contained in the summarised comparative balance sheets (Illustration 6.2) and profit and loss account of Tools India Limited (TIL).

As we have studied at the beginning of this unit, the net change in working capital can be computed easily by subtracting the net working capital at the end of the year from the net working capital at the beginning of the year.

#### TOOLS INDIA LTD Change in Working Capital

The Rs. 27 million increase in working capital of TIL shows the composite changes in the Current assets and current liability. This does not tell us much in terms of the operations of the business. This change could be the net result of changes in all the accounts covered by current items. There might have been qualitative changes resulting from the depletion of liquid items of current assets and increase in non-liquid items such as inventory. In order to answer these questions we try to analyse the changes in each of the working capital accounts.

#### Statement of Changes in Working Capital

A statement of changes in working capital helps us in locating where these changes took place. In the first instance we try to show the increase (decrease) in individual items and then try to classify them in terms of increase and decrease in working capital. Since working capital is measured by subtracting current liabilities from current assets, any increase in current assets and any decrease in current liabilities shows an increase in working capital. Similarly, a decrease in current assets and an increase in current liabilities represents a decrease in working capital.

The statement of changes in working capital (Table 6.1) shows that the increases in current assets amounted to Rs. 52 million, a major part of the increase arising out of cash, receivable and inventory. Decrease in working capital came about mostly from the increased accounts payable, advances from customers and taxes payable. Total amount of decrease in working capital resulting from increase in current liabilities amounted to Rs. 25 million, thus, showing a net increase in working capital of Rs. 27 million.

#### 2.4 FUND FLOW STATEMENT

An analysis of the fluctuations of current assets and current liabilities i.e. working capital tells us how the working capital has increased or decreased. Now, we want to know where the increased working capital is applied if it has increased, and from where funds have been transferred if it has decreased. The profit and loss account gives some indication of the results of operations and its impact on the funds position. We try to integrate the impact of operations reported in the profit and loss account and balance sheet by preparing a statement of changes in the financial position. It describes the sources from which funds were received and the uses to which funds were put. This statement of changes in financial position is usually referred to as fund flow statement or statement of sources and application of funds.

As the title indicates fund flow statement traces the flows of funds through the organisation. In other words, it shows the sources from where the funds were raised and the uses to which they were put.

ſ

The statement of funds flow is usually bifurcated into two logical divisions: sources of funds or inflows during the periods and uses of funds or applications of funds or outflows of funds during the period. The division showing sources of funds summarises all those transactions, which had the net effect of increasing working capital. Uses of funds on the other hand deal with all those transactions, which had the effect of decreasing the working capital. We shall illustrate the primary structure of flows in Figure 6.1

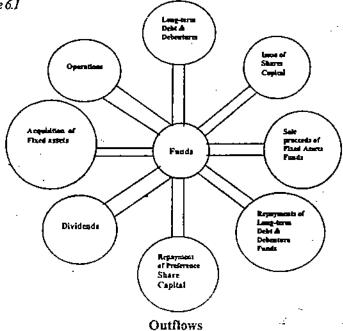

Figure 6.1: Basic Flow of Funds

The flow of funds statement gives a summary of the impacts of various managerial decisions. As such it reflects the policies of financing, investment, acquisition and retirement of fixed assets, distribution of profits, and the success of operations.

|    |                                                                |
|    |                                                                |
|    |                                                                |
|    |                                                                |

#### 2.5 SOURCES OF FUNDS

We have seen that working capital is required to finance that portion of current assets which is not financed by current liabilities. We also saw that the investments represented by current assets are converted into cash during the operating cycle. This implies that our need for financing is for one such cycle. Under normal circumstances every unit of investment in working capital is converted into cash at the end of the cycle at an added value, to the extent of profits.

When we are looking at the possible sources of working capital the most important source is this 'internal generation'. The very idea of internal sources implies that there is something 'external'.

#### Internal Sources

When we are looking for sources funds it is but natural to start searching at home. What do we have? While examining the need for working capital we could also make an assessment as to whether the existing working capital is sufficient or not. Thus, the first internal source is any excess working capital that we might be having.

If we have any non-current assets which do not have any use they could be disposed off, thereby generating additional working capital. Please note that this is not a regular and continuing source of funds.

We have seen earlier that every profitable sale brings with it funds in excess of what was expended on the goods sold. In other words, profits generated by the business contribute towards additional working capital. But you may also notice that whenever we measure profits, we match the revenue against all expenses relating to the revenue, whether it involves use of funds in the current period or not. Thus, the profits measured do not reflect the actual amount of funds available. In order to assess the actual funds generated from current operations we should add, back, to the profits all those items of expenses not involving use of funds during the current period. One major example of such an item is depreciation.

Thus, we could summarise the important possible inter sources of funds as:

 Funds generated from operations. That is, profit plus depreciation and other amortisations; and some other adjustments; . 3) any surplus working capital.

## **Funds From Operations**

Refer to Illustration 6.1. The profit and loss account of TIL shows that operations have provided a gross addition of Rs. 360 million to funds during the period. These funds represent the sale proceeds of goods and services by the company and other incomes.

We also know that some part of these funds is utilised for meeting the cost of input such as material, personnel and other operating costs. Apart from these we also to meet the interest commitments and costs expiration of the machinery and equipment. However, expiration of the costs of the machinery and equipment (Depreciation) is one item which does not require use of funds in the current period.

|                                | <del></del> | Rs. 35      |

<sup>\*</sup> Other income includes Rs. I million profit on sale of furniture,

Thus, funds provided from operations are in fact the revenues earned from operations (as also non-operating incomes) less all immediate costs of goods sold requiring use of funds. In other words, it is not income or profit after taxes plus all the non-fund expenses, such as depreciation and amortisation and adjusted for non-operating incomes and expenses.

The following statement would show funds from operations of TIL as follows:

|                                                       | (RS. iti Million) |
|-------------------------------------------------------|-------------------|
| Operations                                            |                   |
| Net Profit                                            | 55                |
| Add: Depreciation and Amortisation (non-fund)         | 11.90             |
| Large Bas Country of the Country of                   | 66.90             |
| Less: Profit on the Sale of Furniture (non-operating) | 1.00              |
| Total funds provided from operations                  |                   |
| Total fullus provided from operations                 | 65.90             |
|                                                       | <del></del>       |

## **External Sources**

External sources of funds are resources raised from outside the organisation to augment funds availability for any of the uses to be discussed later. Normally, there are only two ways of doing this:

- 1) by contributing or raising additional capital, and
- 2) by increased long-term borrowing.

Please note that short-term creditors are not included as a source of funds since we have already defined funds as "current assets less current liabilities". Thus, working capital represents long-term investment in current assets and hence short-term borrowing will not increase working capital.

The sources of funds, as usually presented in the fund flow statement, are enumerated below:

# Operations: Net Profit after taxes Add: Depreciation Other amortisations Funds Provided by Operations New Issue of Share Capital New Issue of Debentures/Bonds Additional long-term Borrowing Sale Proceeds of Fixed Assets Sale of long-term Investments

Sources of Funds

## Check Your Progress 2

| ) | Please put down what 'internal' and 'external' sources are:                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |

## 2.6 USES (APPLICATIONS) OF FUNDS

#### Need for Additional Funds

A business would require Additional funds for two purposes:

- 1) Financing additional fixed assets, and
- 2) Financing additional working capital.

Construction and Analysis
of Fund Flow and
Cash Flow Statements

It should not be difficult to appreciate the necessity for having adequate fixed facilities with which to conduct business. The amount we have invested in the shop, furniture and fixtures has created the facilities for carrying on the business. It also determines the capacity to produce and to provide services. We cannot expand our business beyond a certain capacity which is limited by the facilities created by fixed assets. In case of a manufacturing firm, it will be plant capacity; in case of a transport undertaking it may be tonnage of trucks, ships or wagons; in case of show business and airlines it may be seating capacity, and so on. Any increase in such capacity would require additional investment. Thus, investment in fixed assets is required to expand capacity or to improve current operation. Usually, additions to investments are judged on the basis of its ability to reduce the present costs or to increase present output.

Additional working capital is required to finance increased holding of inventory, increased credit to customers and increased cash holding requirements. Obviously, current creditors would finance part of this requirement for working capital.

If a firm invests in another shop or in expansion of the existing shop, they will require additional funds for investment in fixed assets and also for increased level of current assets. You will notice that whenever additional investment is to be made in non-current assets, we have to use the funds (working capital) available with us unless separate arrangement is made for their financing. Likewise, when non-current assets are sold they provide funds or result in sources of funds.

We could summarise the usual applications of funds as follows:

- 1) Acquisition of new non-current assets (fixed assets)
- 2) Replacement of non-current debt (loans)
- 3) Payment of dividends
- Increase in the balance of working capital (current assets-current liabilities).

If the trading or business operations are unsuccessful, they may use funds rather than provide funds. The uses of funds, as they are usually presented in the fund flow statement, are enumerated below:

## **USES OF FUNDS**

| Dividends                                            |                                         |
|------------------------------------------------------|-----------------------------------------|
| Redemption of Redeemable Preference Share Capital    | *************                           |
| Repayment of Debentures/Bonds                        |                                         |
| Repayment of Long-Term Loans                         |                                         |
| Purchase of Fixed Assets                             |                                         |
| Purchase of Long-Term-Investment                     |                                         |
| Increase in Working Capital                          |                                         |
| Check Your Progress 3                                |                                         |
| 1) Please put down the list of application of funds. |                                         |
|                                                      |                                         |
|                                                      | *************************************** |

## 2.7 PREPARATION OF FUND FLOW STATEMENT

Let us further extend illustration 6.2 in order to prepare a Fund Flow Statement. From a comparative balance sheet and profit and loss account we could obtain most of the information we require for the preparation of a fund flow statement. We have studied

that changes in the net-working capital amount are caused by the changes in non-working capital items. This may be seen from the summarised balance sheet of TIL (Table 6.2).

We have seen that the net working capital amount increased by Rs. 27 million during 2004, January 1 to December 31. This is other words implies that the working capital from non-current sources should exceed non-current uses by Rs. 27 million.

The summarised balance sheet shows the net change in each account. That is, it does not show the increases and decreases separately. Furniture and fixtures value, for example, has increased by a net amount of Rs. 5.90 million. This increase shows an application of funds. In reality, this account was both a source and an application of funds. We purchased new furniture and fixtures worth Rs. 7.90 million (a use of funds) and sold existing furniture and fixtures which had an original cost of Rs. 2 million and on which depreciation had accumulated to the tune of Rs. I million (a source of funds). Since the purchase transaction was bigger in amount than the sale transaction, the net result was in the 'use of funds'.

- Notes: 1) Furniture and fixtures costing Rs. 2 million with an accumulated depreciation of Rs. 1 million is sold for cash at Rs. 2 million.
  - 2) Dividend paid during the year amounted to Rs. 2.25 million.

If we are to construct a statement showing sources and uses of funds during the year, we need additional information. Some of this additional information is available from the profit and loss account and the appropriation of net income. Some other information like sales proceeds of assets will have to be obtained from the other records of the company.

\* Net income has been obtained by deducting the previous year's balance of Reserves and Surplus from the current year's balance i.e. 97.69 minus 62.69=35 million. To this, the proposed dividend for the current year of Rs. 2.25 million has been added (as it must have been taken into account while determining the net income to be transferred to Reserves and Surplus).

With the necessary background on Profit and Loss Account and Fund Flow Statement having been prepared, you can now watch the Video Programme "Understanding Financial Statement-Part II" at your study centre.

## 2.8 CASH FLOW STATEMENT

Cash is another form of fund although in a narrow sense, it refers to a supply that can be drawn upon, according, to the need. Here the term cash includes both cash and cash equivalents. Cash equivalents are highly liquid short-term investments which could be easily converted into cash without much delay.

#### The summarised cash statement is:

# 2.10 PREPARATION OF CASH FLOW STATEMENT

To start with, we need two successive balance sheets and the operating statement or profit and loss account linking the two balance sheets.

There are two ways in which this statement can be drawn up. The first method is the direct method whereby major classes of gross cash receipts and gross cash payments are disclosed. The second method is known as the short-cut or indirect method. Under this method net profit or loss is taken as the basis and adjusted for the effects of transactions of non-cash nature, changes in current assets and current liabilities and transactions of income or expenses associated with financial cash flows.

#### Direct Method

Under the direct method, you are basically analysing your cash and bank accounts to identify cash flows during the period. You could use a detailed general ledger report showing all the entries to the cash and bank accounts, or you could use the cash receipts and disbursements journals. You would then determine the offsetting entry for each cash entry in order to determine where each cash movement should be reported on the cash flow statement.

Another way to determine cash flows under the direct method is to prepare a worksheet for each major line item, and eliminate the effects of accrual basis accounting in order to arrive at the net cash effect for that particular line item for the period. Some examples for the operating activities section include:

### Cash Receipts from Customers:

- Net sales per the Income Statement
- Plus beginning Balance in Accounts Receivable
- Minus ending Balance in Accounts Receivable
- Equals Cash Receipts from Customers

#### Cash Payments for Inventory:

- Ending Inventory
- Minus Beginning Inventory
- Plus Beginning Balance in Accounts Payable to Vendors
- Minus Ending Balance in Accounts Payable to Vendors
- · Equals Cash Payments for Inventory

## Cash Paid to Employees:

- Salaries and Wages per the Income Statement
- Plus Beginning Balance in Salaries and Wages Payable
- Minus Ending Balance in salaries and Wages Payable
- Equals Cash Paid to Employees

## Cash Paid for Operating Expenses:

- Operating Expenses per the Income Statement
- Minus Depreciation Expenses
- Plus Increase or Minus Decrease in Prepaid Expenses
- Plus Decrease or Minus Increase in Accrued Expenses
- Equals Cash Paid for Operating Expenses

## Taxes paid:

- Tax Expense per the Income Statement
- Plus Beginning Balance in Taxes Payable
- Minus Ending Balance in Taxes Payable
- Equals Taxes Paid

#### Interest paid:

- Interest Expense per the Income Statement
- Plus Beginning Balance in Interest Payable
- Minus Ending Balance in Interest Payable
- Equals Interest Paid

Under the direct method, for this example, you would then report the following in the cash flows from the operating activities section of the cash flow statement:

- Cash Receipts from Customers
- Cash Payments for Inventory
- Cash Paid to Employees
- Cash Paid for Operating Expenses
- Taxes Paid
- Interest Paid
- Equals Net Cash provided by (used in) Operating Activities.

Similar types of calculations can be made of the balance sheet accounts to eliminate the effects of accrual accounting and determine the eash flows to be reported in the investing activities and financing activities sections of the cash flow statement.

## Indirect Method

In preparing the cash flows from the operating activities section under the indirect method, you start with net income per the income statement, reverse out entries to income and expense accounts that do not involve a cash movement, and show the change in net working capital. Entries that affect net income but do not represent cash flows could include income you have carned but not yet received, amortisation of prepaid expenses, accrued expenses, and depreciation or amortisation. Under this method you are basically analysing your income and expense accounts, and working capital. The following is an example of how the indirect method would be presented on the cash flow statement:

- 1) Net Income per the Income Statement
- 2) Minus Entries to Income Accounts that do not represent Cash Flows

Construction and Analysis of Fund Flow and Cash Flow Statements

- 3) Plus Entries to Expense Accounts that do not represent Cash Flows
- 4) Equals Cash Flows before movements in Working Capital
- 5) Plus or minus the change in Working Capital, as follows:
  - An increase in current assets (excluding cash and cash equivalents) would be shown as a negative figure because cash was spent or converted into other current assets, thereby reducing the cash balance.
  - A decrease in current assets would be shown as a positive figure, because other current assets were converted into cash.
  - An increase in current liabilities (excluding short-term debt which would be reported in the financing activities section) would be shown as a positive figure since more liabilities mean that less cash was spent.
  - A decrease in current liabilities would be shown as a negative figure, because cash was spent in order to reduce liabilities.

The net effect of the above would then be reported as cash provided by (used in) the operating activities. The cash flows from investing activities and financing activities would be presented the same way as under the direct method.

Preparation of a cash flow statement through Direct Method is a straight forward exercise and left to the students to follow up. Here, we would take up the cash flow statement by indirect method for further examination through an illustration appended below:

We use the above approach and procedure in preparing a "profit-basis" cash flow statement in Illustration 6.3.

Illustration 2.3

The balance sheet of M/s. Gucci and Sammi Limited as at March 2003 and 2004 are given below:

| M/s Gucci and Sammi            |                         |                         |  |  |

## 2.11 SUMMARY

In this unit we have tried to develop the idea of flow of funds within the organisation. Starting with the funds requirement for an organisation, we have tired to trace the sources and uses of funds.

We tried to study the important sources of funds, namely, the operations, sale of fixed assets, long-term borrowings and issue of new capital. Similarly, important uses of funds were traced to acquisition of fixed assets, payment of dividends, repayment of loans and capital. The whole exercise reveals the areas in which funds are deployed and the sources from which they are obtained. Finally, we have learned how to go about doing the funds flow analysis with the help of published accounting information.

We learnt, distinguishing between cash and fund as also cash flow statement and funds flow statement. The importance of cash and cash flow statement was dwelt upon. Our discussion centered around cash flow statement on "cash basis" and "profit basis". We learnt how to go about doing the cash flow analysis with the help of accounting information and finally presenting cash flows in the form of a "cash flow statement".

## 2.12 KEY WORDS

Cash Equivalents: These are highly liquid short term investments which could be readily converted to cash and which are subject to an insignificant risk of changes in value.

Cash Cycle represents the time during which cash is tied up in operations.

Funds from Operations: The change in working capital resulting from operations. Difference between inflow of funds in the form of revenue and outflow of funds in the form of expenses.

Sources of funds: The sources from which we obtain working capital for application elsewhere. Sources include operations, extraordinary profits, sale of fixed assets, new long-term borrowings, new issue of capital and the reduction of existing working capital.

Use of Funds: Also referred to as application of funds means use of additional working capital and includes amounts lost in operations (Operating loss), acquisition of fixed assets, working capital used for retiring long-term loans, payment of dividends and amounts utilised to increase working capital.

Working Capital: Current assets minus current liabilities.

## 2.13 SELF-ASSESSMENT QUESTIONS/EXERCISES

- What is working capital and what factors affect the size of working capital in an enterprise?
- "Current assets to an extent are financed by current liabilities" Explain.
- "Operations provide funds" Comment
- 4) Differential \* between "Schedule of Changes in Working Capital" and "Fund Flow Statement.

- 5) Does a substantial balance in Retained Earnings indicate the presence of large cash balance?
- 6) "Net Profit of a business cannot pay dividend". Comment.
- 7) Explain the purposes of a cash flow statement.
- 8) What are the differences between a cash flow statement and funds flow statement?
- X Ltd. has a sales revenue of Rs. 1,000. Depreciation for the period is Rs.200.
   Other operating expenses are Rs.900. Net loss for the period is Rs.100.
  - a) What is the amount of funds generated from operations during the period by X Ltd.?
  - b) Under what circumstances can the funds from operation be zero?
- 10) The following information and the balance sheet relate to Shyamsons Ltd.:

## 3.0 INTRODUCTION

The stakeholders of a firm viz., shareholders, creditors, suppliers, managers, employees, tax authorities, government and others are interested broadly in knowing what the firm is doing and whether the firm is financially sound or otherwise. The information requirement of each of these stakeholders may be different. Trade creditors and short term lenders are interested knowing the ability of the firm to meet short term liabilities, whereas term lending institution and banks are interested in the long term survival of the firm. Similarly, others stakeholders may have other information requirements.

Before introducing you to the concept of financial analysis let us recaptulate on the various types of financial statements, as all the variables used in ratio analysis are taken from these statements.

- Profit & Loss A/C (P&L A/C): The income statement or trading and profit
  and loss account shows the various variables regarding expenses and revenue
  and the aggregate difference between these two as either net profit or net loss.
- Balance Sheet: Balance sheet is a statement which shows the financial position
  of a firm on a particular date, it summarises the assets owned by the business
  and the claim of the owners and creditors against these assets in the form of
  liabilities as on the date of the statement.
- 3. Profit & Loss Appropriation A/C: This statement which is also known as profit and loss appropriation account is a link between P&L A/C and Balance sheet. The net profit shown in the P&L A/C is transferred to the balance sheet after appropriation though this statement. Retained earnings are the accumulated excess of earnings over losses and dividends.
- Fund Flow Statement: This statement shows the sources of funds from which additional funds were derived and the use (application) of these funds.
- . 5.. Cash Flow Statement: This statement depicts the change in cash position from one period to another.

Financial statements are the means of providing general information regarding operational results and the financial position of a business firm. These statements do not reveal significant information such as efficiency of management strength and

weakness of the firm, potential of further progress etc. In order to extract meaningful information these statements need to be analysed and interpreted for specific purposes. Analysis of financial statements is the systematic numerical calculation of the relationship between one fact with the other to measure the profitability operational efficiency and the growth potential of the business. The main objectives of financial statement analysis and interpretation are as follows:

- Measuring financial soundness
- Judging solvency
- Measuring profitability
- · Judging operational efficiency
- Indicating trends
- Assessing growth potential
- Inter firm and intra firm comparison.

A ratio is an arithmetical relation between two figures or variables. Financial ratio analysis is a study of ratios between various items or group of items in financial statements. Financial ratio analysis is an analytical tool for measuring the performance of an organisation. Ratio analysis is primarily used to analyse past performance and based on this make future projections.

#### Users of Financial Ratios

Financial ratio analysis is the process of establishing relationship between the variables of the balance sheet and profit and loss account, in order to find out the strength and weakness of the firm. Ratio analysis is undertaken by the various stock holders in the firm viz. trade creditors, suppliers of long-term debt, investors and the management itself. Trade Creditors are interested in the firm's ability to meet claims in the short run. Their analysis will therefore, be confined to the firm's liquidity position in the short run.

Suppliers of long-term debt, on the other hand are more concerned with long-term solvency and survival. They analyse the firm's profitability over time, its ability to generate cash, its ability to repay interest and the principle amount. They also analyse the capital structure. Long-term suppliers of credit do analyse the historical financial statements but their main focus is on projected or proforma financial statement to analyse its future solvency and profitability. Investors are interested in the firm's carnings and how these earnings are used. They concentrate on the firm's present and future profitability. They are also interested in the firm's financial structure to the extent that it influences the firm's earnings ability and risk.

The management of the firm would be interested in every aspect of the financial ratio analysis as, this helps them assess how efficiently and effectively the firm's resources are being used.

### Nature of Ratio Analysis

Ratios are used as a bench mark for evaluating the financial position and performance of a firm. Accounting figures presented in the financial statements would convey some meaning only if they are seen in relation to the other variables. Ratios help to other summarise large quantities of financial information (data). Through ratio analysis one can make a qualitative judgment. The ratios basically reflect a quantitative relationship among different variables.

e) Fixed Assets to Long-term Funds Ratio: It is calculated as follows:

Fixed assets

Long term funds

This ratio indicates the proportion of long term funds (Share capital reserves and surplus and long term loans) deployed in fixed assets (gross fixed assets minus depreciation). A high ratio indicates the safety of funds in case of liquidation. This ratio also indicates the proportion of long-term funds invested in working capital.

f) Proprietary Ratio: It is calculated as follows:

Net worth Total assets

Reserves which are created and earmarked for specific purposes should not be included in the calculation of net worth. A high ratio is an indication of a strong financial position.

g) Interest Cover: It is calculated as follows:

Profit before interest depreciation and tax
Interest

The interest coverage ratio reflects the number of times interest charges are covered by the funds that are available for payment of interest. Generally a ratio of 2:1 is considered as adequate.

b) Dividend Cover: It is calculated as follows:

Net profit after tax
Dividend

This ratio indicates the number of times the dividends are covered by net profit. This ratio also highlights the retained earnings.

Debt Service Coverage Ratio: It is calculated as follows:

Profit before interest and taxes

Interest + perodic loan instalment

This ratio reflects the ability of the firm to service its obligations on account of interest payment and loan repayments. A high ratio is an indicator of the fact that the firm is less likely to default on payments.

Calculate the Capital Gearing Ratio, Liquidity Ratio and Fixed Assets Ratio.

3) From the following information, calculate Interest Coverage Ratio, and Debt to Cash Flow Coverage Ratio:

| Net Income After Tax        | Rs. 15,630              |
|-----------------------------|-------------------------|
| Depreciation Charges        | Rs. 20,000              |
| Tax Rate                    | 50% of net income       |
| 5% Mortage Bonds            | Rs. 2,50,000            |
| Fixed Interest Charges      | Rs. 14,750              |
| Sinking Fund Appropriations | 5% of Outstanding Bonds |

## 3.2.2 Liquidity Ratios (Short-term Solvency Ratios)

a) Current Ratio: It is calculated as follows:

Current assets loans and advances
Current liabilities and provisions

This ratio measures the solvency of the company in the short run (I year). Current assets are those assets which can be converted into cash within one accounting period (usually 1 year) and current liabilities are those liabilities which are payable within a year. A current ratio of I:33:1 is the minimum ratio required by banks to finance working capital needs. A very high current ratio implies that the firm has blocked the funds either in inventories, debtors or idle cash.

b) Quick Ratio or Liquid Ratio: It is calculated as follows:

Current assets, loans & advaces - Inventories

Current liabilities & Provisions - Bank Overdraft

This ratio is a modification of the current ratio. In this ratio inventories are subtracted from current assets and the bank overdraft is subtracted from, current liabilities. The reason for doing so is, that the bank overdraft is secured by inventories. This ratio depicts the ability of the firm to service current liabilities other than the bank overdraft.

c) Absolute Liquid Ratio (Super Quick Ratio): It is calculated as follows:

Absolute liquid Assets
Current liabilities

It is a ratio of absolute liquid assets to quick liabilities. However, for calculation purpose current liabilities are taken into consideration. Absolute liquid assets are cash, bank balances and marketable securities. An ideal absolute liquid ratio is taken as 1:2 or .5.

d) Bank Finance to Working Capital Gap Ratio: It is calculated as follows:

This ratio shows the dependence on bank finance for working capital. Working capital gap is equal to current assets minus current liabilities other than bank borrowings.

e) Interval Measures: A dynamic measure of liquidity, the interval measure is defined as:

Interval measure shows the time interval for which the liquid assets of the firm will suffice to meet its operating expenditure.

| Debentures                | 45,000   | Sundry Debtors         | 27,000   |
| Sundry Creditors          | 70,200   | Cash at Bank           | 6,840    |
| Provision for<br>Taxation | 1,800    | Prepaid Expenses       | 2,160    |
|                           | 2,07,000 |                        | 2,07,000 |

Calculate the following ratios:

- Current Ratio,
- 2) Liquidity Ratio.

What conclusions do you draw about the company on the basis of these ratios?

## 3.2.3 Activity or Turnover Ratios

a) Inventory: For manufacturing and trading firms a considerable amount of funds may be tied up in financing of raw material, work in progress and finished goods. A good inventory management practice is to keep inventory level consistent with the need to fulfil customer's order in time.

Inventory turnover ratio = 
$$\frac{Cost \ of \ goods \ sold}{Average \ inventory} \ or$$

Average inventory = 
$$\frac{Opening Stock + Closing Stock}{2}$$

Higher the inventory turnover ratio or lower the stock turnover period the better it is.

- b) Debtors: The three main debtors ratio are as follows:
  - (i) Debtor turnover ratio: It is calculated as follows:

This ratio measures the efficiency of a firm in converting debtors into cash, higher ratios indicate better efficiency:

(ii). Average Collection period: It is calculated as follows:

$$\frac{Average\ debtors}{Credit\ sales} \times 365$$

This ratio measures the time it takes to collect the amount from debtors.

(iii) Bad debts: It is calculated as follows:

This ratio reflects the efficiency of credit control procedures.

- c) Creditors
  - (i) Creditors payment period: It is calculated as follows:

This ratio measures the average time taken to pay for goods and services purchased by the company. In general, longer the period better it is, because the operation of the firms are financed interest free by suppliers. An unduly long period would indicate liquidity problem on one hand and may also impact the credit rating of the firm.

(ii) Creditors turnover ratio: It is calculated as follows:

d) Assets Turnover Ratio: These ratios measure the firms ability to generate sales revenue in relation to the size of the asset investment.

(i) Fixed assets turnover ratio:

Sales
Fixed assets

This ratio measures sales per rupee of investment. This ratio measures the efficiency with which fixed assets are being employed. When the fixed assets of the firm are old and substantially depreciated the fixed asset turnover ratio tends to the high.

(ii) Total assets turnover ratio: It is calculated as follows:

Sales Total assets

This ratio measures how efficiently assets are employed overall.

(iii) Working capital turnover ratio: It is calculated as follows:

Sales
Capital Employed

This ratio indicates the extent of working capital turned over in achieving sales:

(iv) Sales to capital employed Ratio: It is calculated as follows:

Sales
Capital employed

This ratio indicates efficiency in utilisation of capital employed in generating revenue.

## Check Your Progress 3

 Compute the stock turnover ratio with the help of following figures relating to Meenakshi Limited:

Trading Account
For the year ending 31 st March, 2004

| To Opening Stock To Purchases To Carriage Inwards To Gross Profit | Rs.<br>15,920<br>39,000<br>1,000<br>36,480 | By Sales<br>By Closing Stock | Rs.<br>78,000<br>14,400 |
|-------------------------------------------------------------------|--------------------------------------------|------------------------------|-------------------------|
| David Co.                                                         | 92,400                                     |                              | 92,400                  |

 Raj & Co. sells goods on cash as well as on credit. The following particulars are extracted from the books of accounts for the year 2004;

| Total Gross Sales Sales Returns Total Debtors for Sales as on 31.12.04 Bills Receivable as on 31.12.04 Provision for Doubtful Debts as on 31.12.04 Total Creditors on 31.12.04 Calculate the Average Collection period. | Rs.<br>1,50,000<br>30,000<br>10,500<br>13,500<br>3,000<br>1,000 |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------|
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------|

 Tyagi and Sons Limited purchases goods on cash and credit terms. From the following particulars obtained from the books, calculate the creditors turnover and average payable period.

|                                      | Rs.      |
|--------------------------------------|----------|
| Total Purchases                      | 8,40,000 |
| Cash Purchases                       | 70,000   |
| Purchases Returns                    | 40,000   |
| Creditors at the end of the year     | 1,20,000 |
| Bills Payable at the end of the year | 20,000   |
| Provision for Discount on Creditors  | 7,500    |

4) The following is the Balance sheet of Sanchit Company Ltd. as on 31st 2004:

| Liabilities         | Rs.      | Assets                  | Rs.      |
|---------------------|----------|-------------------------|----------|
| Share Capital       | 80,000   | Fixed Assets            | 1,60,000 |
| General Reserve     | 30,000   | Debiors                 | 60,000   |
| Profit and Loss A/c | 50,000   | Bills Receivable        | 20,000   |
| Mortgage Loan @ 10% | 80,000   | Cash at Bank            | 50,000   |
| Creditors           | 40,000   | Preliminary<br>Expenses | 10,000   |
| Bills Payable       | 20,000   |                         |          |
| Total .             | 3.00.000 | ·                       | 3,00,000 |

#### Other information:

Sales during the year 2003-04 amounted to Rs. 1,60,000.

#### Calculate:

- (i) Capital Turnover Ratio
- (ii) Fixed Assets Turnover Ratio
- (iii) Working Capital Tumover Ratio
- (iv) Current Assets Turnover Ratio
- (v) Total Assets Turnover Ratio.

#### 3.2.4 Profitability Ratios

The purpose of calculating these ratio is to assess the adequacy of the profits earned by the company and also to estimate is seend of profitability over a period of time. Profitability of a company is the net result of numerous policies and decision. These ratios show the combined effect of capital budgeting, liquidity management, asset management on operating results. Profitability, ratios are measured with reference to sales, capital employed, total assets, shareholders funds etc. The major profitability ratios are as follows:

- a) Return on Capital Employed (ROCE) or Return on Investment (ROI)
- b) Earning Per Share (EPS)
- c) Cash Earning Per Share (cash EPS)
- d) Gross Profit Margin
- e) Net profit Margin
- f) Cash Profit Ratio
- g) Return on Assets
- h) Return on Net Worth (or Return on Shareholders Equity)
- i) Operating Ratios.
- a) Return on Investment: The aim of any business enterprise is to earn a return on capital employed. ROI is determined by dividing the net profit or income by the capital employed or investment made to achieve the profit.

$$ROI = \frac{Net\ Profit}{Capital\ Employed} \times 100$$

ROI consists of two components (i) Profit Margins (ii) Investment Turnover.

$$ROI = \frac{Net \ profit}{Sales} \times \frac{Sales}{Investment \ in \ assets}$$
(Profit Margin) (Investment Turnover)

ROI can be improved by increasing the profit margin and investment turnover or both. The capital employed is found out by adding the debt and equity components of the balance sheet viz., Share Capital (paid up), Reserves and Surplus and Loans (secured and unsecured), from this total subtract if any, (i) Capital Work in Progress (ii) Investment Outside the Business Activities (iii) Preliminary Expenses (iv) Debit Balance of P&L A/C.

ROI is a measure regarding optimal utilisation of the assets of the company. This measures helps in selecting and disposing of assets as well as in selecting various investment proposals.

(b) Earnings Per Share (EPS): One of the objectives of the firm/company is wealth/value maximisation, of the stake of various stakeholders. The value is maximised when the market price of equity shares increases. The market price of equity shares is a function of the present and future earning potential of the firm. An appropriate and operationally feasible way to measure value maximisation is to measure Earning Per Share (EPS). The EPS is one of the important measures of economic performance of an economic entity. A higher EPS among the comparable firms means a better capital productivity.

1. EPS when debt and equity is used:

$$\frac{(EBIT-I)(I-T)}{N}$$

II. EPS when debt equity and preference shares are used:

$$\frac{(EBIT-I)(I-T)-D_p}{N}$$

Where EBIT = Earning before Interest and Taxes

I = Interest

T = Rate of Corporate Tax
Dp = Preference Dividend
N = Number of Equity Shares

 c) Cash Earning Per Share: The cash earning per share is calculated by dividing the Net Profit + Depreciation by number of Equity Shares.

$$Cash EPS = \frac{Net Profit + Depreciation}{No. of Equity Shares}$$

d) Gross Profit Margin: The gross profit margin is calculated as follows:

$$= \frac{Sales - \cos t \text{ of goods sold}}{sales} \times 100$$

$$= \frac{Gross \text{ profit}}{Sales} \times 100$$

The gross profit measures, the excess of sales proceed over their cost before taking into consideration administration, selling, distribution and financing charges. This ratio measures, the efficiency of the company's operation. Under normal circumstances the gross profit margin should remain unchanged over a period of time irrespective of the level of production and sales, since it is based on the assumption that all cost deducted when computing gross profit are directly variable with sales. Variation in gross profit margin may be due to the following reasons:

- 1) price cuts
- 2) cost increases
- change in product mix
- 4) under or over valuation of stocks.
- e) Net Profit Margin: This profit is calculated as follows:

This ratio reflects net profit margin on the total sales after deducting all expenses but before deducting the interest and corporate tax. The non-operating incomes and expenses are ignored in computation of net profit before tax, depreciation and interest. This ratio is used to compare performance with that of the previous year as well as with the competitors.

f) Cash Profit Ratio: This ratio is computed as follows:

$$\frac{Cash \, profit}{Sales} < 00$$

where Cash profit= Net profit+Depreciation

This ratio measures the cash generated by the company as a result of the operations expressed in terms of sales. In situations where the profit fluctuates from year to year, due to changes in tax rates and depreciation rates and policies, this ratio is a reliable indicator of performance. This ratio is not affected by the method of depreciation used to charge depreciation.

g) Return on Assets: This ratio is calculated as follows:

$$\frac{Net\ profit\ after\ tax}{Total\ assets} \times 100$$

This ratio establishes the relationships of profits with the total assets of the organisation. This ratio indicates the efficiency of utilisation of assets in generating revenue.

## h) Return on Shareholders Funds or Return on Net Worth:

$$\frac{Net \ profit \ after \ interest \ and \ tax}{Net \ worth} \times 100$$

Where Net Worth= Equity capital+reserves and surplus. This ratio expresses the net profit in terms of the equity shareholder funds.

## i) Operating Ratios

The ratio of all operating expenses (i.e., materials used, labour, factory overheads, administration and selling expenses), to sales is the operating ratio over a period of time would reveal the behaviour of the particular cost. The operating ratios are classified as follows:

| (a) | Material cost ratio $= \frac{Materials consumed}{Sales} \times 100$                 |    |
|-----|-------------------------------------------------------------------------------------|----|
| (b) | Labour cost ratio $= \frac{Labour cost}{Sales} \times 100$                          |    |
| (c) | Factory overhead ratio $= \frac{Factory\ expenses}{Sales} \times 100$               |    |
| (d) | Administrative Expense Ratio = $\frac{Administrative \ expenses}{Sales} \times 100$ |    |
| (e) | Selling and distribution = Selling and distribution experience                      | ۲) |

Sales

## 3.2.5 Market Test Ratios

The market test ratio relates the firm's stock price to its earning and book value per share. These ratios are indicators of the performance of the company and also reflects the likely performance of the company in the near future. If the firm's profitability, solvency and turnover ratios are good then the market test ratios will be high. The market test ratios are as follows:

- a) Divided Payout Ratio
- b) Dividend Yield
- c) Book Value

#### a) Dividend Payout Ratio:

Dividend payout ratio is the dividend per share divided by the earnings per share. Dividend payout ratio indicates the extent of the net profit distributed to the shareholders by way of dividend. A higher dividend payout ratio indicates that the company does not require further funds in the near future or it may also indicate that the cost of borrowing is less than the cost of equity. A low payout ratio is an indicator of the fact that company is in requirement of funds.

#### b) Dividend Yield:

$$\frac{Dividend\ per\ share}{Market\ price} \times 100$$

This ratio reflects the percentage yield earned by investors by investing in company's share at the current market price. This measures is specially useful for those investors who are interest in regular returns rather than capital appreciation.

# Equity capital + Reserves - Profite Loss A/C debit balance Total number of equity shares

This ratio indicates the net worth per equity share. Book Value is a function of the past earnings and distribution policy of the company.

## Check Your Progress 5

#### 1) The capital of Sun Ltd. is as follows:

|                                            | Rs.       |
|--------------------------------------------|-----------|
| 9% 30,000 Preference Shares of Rs. 10 each | 3,00,000  |
| 80,000 Equity Shares of Rs. 10 each        | 8,00,000  |
|                                            | 11,00,000 |

The following additional information has been obtained form the books of the company.

Profit after tax at 60% Rs. 2,0,000; Depreciation Rs. 60,000; Equity Dividend Paid 20% Market Price of Equity Share Rs. 40.

You are required to calculate (i) Dividend Yield on Equity Share; (ii) Earnings Per Share; (iii) Price Earning Ratio, and (iv) Dividend Pay-out Ratio.

## 3.3 UTILITY OF RATIO ANALYSIS

The ratio analysis is one of the most widely used tools of financial analysis. The various stakeholders in the firm would be interested in the information relating to operating and financial efficiency. They would also be interested in knowing the growth prospect of the firm. The various stake holders use ratio to determine those financial characteristics of the firm in which they are interested. With the help of ratios, one can determine:

- the ability of the firm to service its current obligations;
- the effect of borrowings on long term solvency;
- the efficiency with which the firm is utilising its assets in generating sales revenue; and
- the overall operating efficiency and performance of the firm.

#### Performance Analysis:

As stated above various stakeholders have different interests in the firm; short term creditors will be interested in the current financial position, while profitability long term creditors will be interested in the solvency of the firm. The equity holders are generally concerned with the returns. It is to be noted here that in every kind of financial analysis snort-end long term financial position along with profitability are tested, but the emphasis would differ depending upon the interest of the stakeholder.

## 3.4 DIAGNOSTIC ROLE OF RATIOS

## Profitability Analysis

- I. How profitable is the company? What accounting policies and practices are followed by the company? Are they stable?
- 2. Is the profitability (RONA) of the company high/low average? What are the underlying reasons for current profitability? Is it due to:
  - · Profit Margins
  - Asset Utilisation
  - · Non Operating Income
  - Window Dressing
  - · Changes in Accounting Policy
  - Inflationary Conditions?
- 3. Is the return on equity (ROE) high/low/average? Is it due to:
  - return on investment
  - financing mix
  - capitalisation of reserves?
- 4. What is the trend of profitability? Is it improving because of better utilisation of resources or curtailment of expenses of strategic importance?
- Will the company be able to sustain high profitability or improve the profitability given the competitive and other environment utilisations.

## Asset Utilisation

These types of ratios are basically used to gauge the effective utilisation of assets. Here assets include, both fixed as well as current assets. Through calculating these ratios we try to find out:

- 1. How effectively assets are being utilised to generate sales?
- 2. Are the level of debtors and inventories relative to sales reasonable in view of the firm's competitive and operating characteristics?
- 3. What are the trends in collection periods, inventory turnover and fixed assets turnover?
- Is the improvement in the fixed assets turnover due to
  - depreciated book value of fixed assets?
  - disposal of some fixed assets.

## Liquidity Analysis

As already discussed these ratios are used to predict short term and long-term solvency of the firm. In addition to this these ratios are also used to analyse the following:

- 1. What is the level of current assets and liabilities? Is it reasonable in the context of the firm's business?
- 2. What is the frequency and duration of payment to the creditors? If it is high or low what is the effect of it?
- 3. How efficiently and frequently does the company convert it's current assets into cash?
- 4. Given the company's riskiness and future financial needs, what is the pattern of financing:
  - · What is the mix of debt and equity?
  - What is the maturity structure of debt and is the company faced with large debt repayment in the near future?
- 5. What are the lease commitments of the firms and the quantum of contingent liabilities?

## 3.5 APPLICATION OF FORMULAS

Example 3.1: The following is the Trading and Profit and Loss A/C and Balance Sheet of a firm:

Trading and Profit and Loss Account

| Particular                 | Rs.      | Particular          | Rs.      |
|----------------------------|----------|---------------------|----------|
| To Opening Stock           | 10,000   | By Sales            | 1,00,000 |
| To Purchases               | 55,000   | By Closing Stock    | 15,000   |
| To Gross Profit c/d        | 50,000   |                     |          |
|                            | 1,15,000 |                     | 1,15,000 |
|                            |          | By Gross Profit b/d | 50,000   |
| To Administration Expenses | 15,000   |                     |          |
| To Interest                | 3.000    |                     |          |
| To Selling Expenses        | 12,000   |                     |          |
| To Net Profit              | 20,000   |                     |          |
|                            | 50,000   |                     | 50,000   |
|                            | ]        |                     |          |
|                            |          |                     | <u> </u> |

Balance Sheet

| Balance Sheet       |          |                     |          |
|---------------------|----------|---------------------|----------|
| Liabilities         | Rs.      | Assets              | Rs       |
| Capital             | 1,00,000 | Land and Buildings  | 50,000   |
| Profit and Loss A/C | 20,000   | Plant and Machinery | 30.000   |
| Creditors           | 25,000   | Stock               | 15,000   |
| Bills Payable       | 15,000   | Debtors             | 15,000   |
| Bills Fayable       | 15,000   | Bills Receivable    | 12,500   |
|                     |          | Cash at Bank        | 17,500   |
|                     |          | Furniture           | 20,000   |
|                     | 1,60,000 |                     | 1,60,000 |

Calculate the following ratios: (1) Inventory turnover ratio (2) Current ratio (3) Gross profit ratio (4) Net Profit (5) Operating ratio (6) Liquidity ratio (7) Proprietary ratio

#### Solution:

Inventory Turnover Ratio = 
$$\frac{Cost \ of \ Goods \ Sold}{Average \ Stock}$$

Cost of Goods Sold =

| Opening Stock<br>Purchase | 10,000<br>55,000<br>65,000 |
|---------------------------|----------------------------|
| Less: Closing Stock       | 15,000<br>50,000           |

$$\frac{10,000+15,000}{2}=12,500$$

Inventory Turnover Ratio = 
$$\frac{50,000}{12,500}$$
 = 4 times.

## 2. Current Ratio:

| Current Assets                          | Rs.                                            | Current Liabilities        | Rs.                        |
|-----------------------------------------|------------------------------------------------|----------------------------|----------------------------|
| Stock<br>Debtors<br>B/R<br>Cash in Bank | 15,000<br>15,000<br>12,500<br>17,500<br>60,000 | Creditors<br>Bills Payable | 25,000<br>15,000<br>40.000 |

Current Ratio = 
$$\frac{60,000}{40,000} = 1.5:1$$

## 3. Gross Profit Ratio:

Gross Profit Ratio 
$$= \frac{Gross \, Profit}{Net \, Sales} \times 100 = \frac{50,000}{1,00,000} \times 100 = 50\%$$

## 4. Net Profit Ratio:

Net Profit Ratio = 
$$\frac{Net \, Profit}{Net \, Sales} \times 100 = \frac{20,000}{1,00,000} \times 100 = 20\%$$

Operating Expenses

(Rs.)

| Administration Expenses<br>Selling Expenses | 15,000<br>12,000<br>27,000 |
|---------------------------------------------|----------------------------|
|                                             |                            |

Operating Ratio 
$$\frac{50,000 + 27,000}{1,00,000} \times 100 = 77\%$$

## 6. Liquidity ratio = $\frac{Liquid \ Assets}{Current \ Liabilities}$

| Liquid Assets                    | Rs.              | Current Liabilities        | Rs.              |
|----------------------------------|------------------|----------------------------|------------------|
| Cash in Bank<br>Bills Receivable | 17,500<br>12,500 | Creditors<br>Bills Payable | 25,000<br>15,000 |
| Debtors                          | 15,000           | ,                          | 40,000           |

Liquidity Ratio = 
$$\frac{45,000}{40,000} = 1.125:1$$

#### 7. Proprietary Ratio

Proprietary Ratio = 
$$\frac{Shareholder's funds}{Total Assets} \times 100$$

| Capital    | 1,00,000 |
|------------|----------|
| Profit and | 20,000   |
| Loss A/C   | 1,20,000 |

Total Assets = Rs. 1,60,000

Proprietary ratio = 
$$\frac{1,20,000}{1,60,000} \times 100 = 75\%$$

Example 3.2: There are three companies in the country manufacturing a particular chemical. Following data are available for the year 2003-04.

| Сопрапу | Net Sales | Operating Cost | Operating Assets |
|---------|-----------|----------------|------------------|
| A Ltd.  | 300       | 255            | 125              |
| B Ltd.  | 1,500     | 1,200          | 750              |
| C Ltd.  | 1,400     | 1,050          | 1,250            |

Which is the best performer as per your assessment and why?

#### Solution:

Comparative statement of performance

(Rs. Lakhs)

| Particular                             | A Ltd. | B Ltd. | C Ltd. |
|----------------------------------------|--------|--------|--------|
| Sales                                  | 300    | 1500   | 1,400  |
| Less: Operating Cost                   | 255    | 1200   | 1,050  |
| Operating Profit (A)                   | 45     | 300    | 350    |
| Operating Assets (B)                   | 125    | 750    | 1,250  |
| Return on Capital Employed (A)/(B)×100 | 36%    | 40%    | 28%    |

Analysis: Basing on the return on capital employed, B Ltd. is the best performer in comparison to A Ltd. and C Ltd.

Example 3.3: Calculate the P/E ratio from the following:

| Equity Share Capital (Rs.20 each) | 50,00,000 |
|-----------------------------------|-----------|
| Reserve and surplus               | 5,00,000  |
| Secured Loans at 15%              | 25,00,000 |
| Insured Loans at 12.5%            | 10,00,000 |
| Fixed Assets                      | 30,00,000 |
| Investments                       | 5,00,000  |
| Operating Profit                  | 25,00,000 |

Income tax Rate 50%. Market Price/Share Rs.50.

## Solution:

(Rs.)

| Operating Profit                                                      |          | 25,00,000 |
|-----------------------------------------------------------------------|----------|-----------|
| Less: Interest on                                                     |          |           |
| Secured Loans @ 15%                                                   | 3,75,000 |           |
| Unsecured Loans @ 12.5%                                               | 1,25,000 | 5,00,000  |
| Profit Before Tax (PBT) Less: Income-Tax @ 50% Profit After Tax (PAT) |          | 20,00,000 |

Number of equity shares 
$$=\frac{50,00,000}{20} = 2,50,000$$

Earning as per share (EPS) = 
$$\frac{Profit \ after \ tax}{No. \ of \ equity \ Shares} = \frac{Rs.10,00000}{Rs.2,50,000} = Rs.4$$

Price per share = Rs.50.

P/E ratio = Market price per share/EPS = Rs.50/Rs.4

= 12.50

Example 3.4: Profit and Loss Account of Happy Ltd.for the year ended 31st March 2004.

| <u></u>                   | Rs.      |                  | Rs.      |
|---------------------------|----------|------------------|----------|
| To Opening stock          | 90,000   | By Sales         | 9,00,000 |
| To Purchases              | 5,60,000 | By Closing Stock | 90,000   |
| To Wages                  | 2,14,000 | 1                | 1 1 1    |
| To Gross Profit           | 1,26,000 |                  | 9,90,000 |
|                           | 9,90,000 |                  | 7,73,000 |
| To Salaries               | 16,000   | By Gross Profit  | 1,26,000 |
| To Electricity            | 10,000   |                  | ' ',     |
| To Miscellaneous Expenses | 10,000   |                  |          |
| Γο Depreciation           | 30,000   |                  |          |

|                      |          |        | 1,80,000       |
| Equity Share Capital |          |        | 1,20,000       |
| Reserves and Surplus |          |        | 2,10,000       |
| Secured Loans        |          |        | 90,000         |
| Creditors            |          | Total: | 6,00,000       |
|                      |          |        |                |
| Assets               |          |        | }              |
| Fixed Assets         | 5,40,000 |        | 3,90,000       |
| Less: Depreciation   | 1,50,000 |        | ĺ              |
| Stock                |          |        | 90,000         |
| Debtors              |          |        | 1,05,000       |
| Cash                 |          |        | 15,000         |
|                      |          |        | 6,00,000       |

Discuss under the following important functional grouping the usual ratios and comment on the financial strength and weakness: (i) Liquidity and solvency ratios; and (ii) Profitability test ratios.

#### Solution:

I) Liquidity ratios

1. Current Ratio = 
$$\left[\frac{Current\ Assets}{Current\ Liabilities}\right] = \frac{2,10,000}{90,000} = 2.3$$

2. Acid test Ratio = 
$$\frac{Liquid \ Assets}{Current \ Liabilities} = \frac{1,20,000}{90,000} = 1.3$$

Solvency ratios

1. Debt – Equity Ratio = 
$$\left[\frac{Debt}{Equity}\right] = \frac{2,10,000}{3,00,000} = 0.7$$

III) Profitability test ratios

1. Gross Profit Ratio = 
$$\left[\frac{Gross Profit}{Sales} \times 100\right] = \frac{1,26,000}{9,00,000} = 14\%$$

2. Net Profit Ratio = 
$$\left[\frac{Net\ Profit}{sales} \times 100\right] = \frac{60,000}{9,00,000} \times 100 = 6.7\%$$

Return on Capital employed = 
$$\left[\frac{Net\ Profit}{Capital\ Employed} \times 100\right] = \frac{60,000}{5,10,000} \times 100 = 11.7\%$$

#### Analysis

- 1. The current and acid test ratios are satisfactory. Since they are above the ideal standards of 2:1 and 1:1 respectively.
- 2. The debt equity ratio is marginally higher than the ideal standard of 2:1. However, the debt-equity ratio fixed assets ratios reflect a satisfactory position of the company.

The Gross Profit Ratio and Net Profit Ratio and Return on Capital Employed
is not impressive and effort needs to be made to improve the profitability of
the Company.

Example 3.5: The summarised Balance Sheet of M/s Ram Shyam. Traders Ltd. for the year 31.3.2005 is given below:

(Rs. in Lakh)

| Capital and Liabilities                                         |                | Assets                                                   |                |     |
|-----------------------------------------------------------------|----------------|----------------------------------------------------------|----------------|-----|
| Equity Share Capital (fully paid-up) Reserves and Surplus       | 140            | Fixed Asset (at cost) Less: Depreciation Current Assets: | 210<br>25      | 185 |
| Profit and Loss Account Provision for Taxation Sundry Creditors | 20<br>10<br>40 | Stock<br>Debtors<br>Cash                                 | 25<br>30<br>15 | 70  |
| Total:                                                          | 255            |                                                          | Total:         | 255 |

The following further particulars are also given for the year:

(Rs. in lakhs)

| <del></del>                             |     |
|-----------------------------------------|-----|
| Sales                                   | 120 |
| Earnings before interest and tax (EBIT) | 30  |
| Net Profit After Tax (PAT)              | 20  |
|                                         |     |

Calculate the following for the company and explain the significance of each in one or two sentences:

(i) Current ratio; (ii) Liquidity ratio; (iii) Profitability ratio; (iv) Profitability on funds employed; (v) Debtors' turnover; (vi) Stock turnover; (vii) Average collection period; (viii) Return on equity.

## Solution:

(i) Current Ratio

(Rs. Lakhs)

| Current Assets      |          |
|---------------------|----------|
| Stock<br>Debtors    | 25<br>30 |
| Cash                | 15       |
| Total               | 70       |
| Current Liabilities | 40       |

$$= \left[ \frac{Current\ Assets}{Current\ Liabilities} \right] = \left[ \frac{70}{40} \right] = 1.75:1$$

This ratio indicates the financial position of firm in meeting current liabilities out of current assets. The prudential norm is 2:1.

(ii)

Liquidity Ratio = 
$$\left[\frac{quick \ assets}{Current \ liabilities}\right] = \left[\frac{Current \ assets - Stock}{Current \ liabilities}\right] = \left[\frac{70 - 25}{40}\right] = 1.125 : 1$$

Liquidity ratio indicates the liquidity position of the company in meeting its current liabilities out of the liquid assets. The prudential norm is 1:1

(iii) Profitability Ratio = 
$$\left[\frac{EBIT}{Sales} \times 100\right] = \frac{30}{120} \times 100 = 25\%$$

This ratio indicates the margin of profit made on sales.

(iv) Profitability on funds employed:

$$= \left[\frac{EBIT}{Share\ capital\ and\ longterm\ loan} \times 100\right] = \frac{30}{205} \times 100 = 14.64\%$$

This ratio indicates the margin of profit made on sales.

(v) Debtor's turnover = 
$$\left[\frac{Sales}{Average Debtors}\right] \frac{120}{30} = 4 \text{ times}$$

It indicates the speed in conversion of debtors into cash.

(vi) Stock turnover = 
$$\left[\frac{Sales}{Average Stock}\right] = \frac{120}{25} = 4.8 \text{ times}$$

It indicates the number of times the stock is converted into sales.

(vii) Average collection period = 
$$\left[\frac{Average\ Debtors}{Credit\ sales} \times 12\right] = \frac{30}{120} \times 12 = 3\ months$$

This ratio indicates the average credit period allowed to the customers.

(viii) Return on equity = 
$$\left[\frac{PAT}{Shareholder's funds} \times 100\right] = \frac{20}{205} \times 100 = 9.76\%$$
.

This ratio indicates the percentage profit after tax earned on shareholders funds.

# Understanding and Analysis of Financial Statements

Example 3.6: The Profit and loss Account and Balance Sheet of XYZ Ltd. are as under:

Profit and Loss Account for the year ended 31" December, 2004.

| Net Sales                     |                      | 3,00,000 |
|-------------------------------|----------------------|----------|
| Less: Cost of Production      |                      | 2,58,000 |
| 1                             |                      | 42,000   |
| Less: Operating Expenses:     |                      | )        |
| Selling                       | 2,200                |          |

| Tax 50% on net income         |                      | 10,000   |
| Net Income (after Tax)        |                      | 10,000   |

Balance Sheet as at 31st December, 2004

(Rs.)

| Liabilities                     | ·        | T          |
|---------------------------------|----------|------------|
| Equity Share Capital            |          | 50,000     |
| 7% Preference Share Capital     |          | 10,000     |
| Reserves and Surplus            |          | 40,000     |
| 6% Mortgage Debentures          |          | 70,000     |
| Creditors                       |          | 6,000      |
| Bills Payable                   |          | 10,000     |
| Outstanding Expenses            |          | 1,000      |
| Provision for Taxation          |          | 13,000     |
| i                               |          | 2,00,000   |
| Assets                          |          |            |
| Fixed Assets Less: Depreciation | 1,80,000 | 1,30,000   |
| 203. Depreciation               | 50,000   | 15,000     |
| Investment in Government sec    | urities  | 13,000     |
| Debtors                         |          | 20,000     |
| Stock                           |          | 30,000     |
| Cash                            |          | 5,000      |
| '                               |          | 2,00,000   |
|                                 |          | 1 4,00,000 |

You are required to calculate the following ratios: (i) Return on Investment; (ii) Net Profit Ratio; (iii) Current Ratio; (iv) Net Worth to Capital Employed; (v) Cost of Production to Capital Employed.

## (i) Return on Investment

$$\frac{Net Operating Profit \times 100}{Capital employed} = \frac{Rs.22,700 \times 100}{Rs.1,55,000} = 14.65\%$$

Operating Profit

Net profit before non-operating income but

after Interest on bank overdrafts

Capital employed

Net fixed assets+Current assets-Current liabilities

Alternatively,

Return on Investment

Investment = 
$$\frac{Net\ Profit\ (before\ interest\ and\ tax) \times 100}{Capital\ employed} = \frac{Rs.24,200 \times 100}{Rs.1,70,000} = 14.24\%$$

Tax and profit includes income from interest on Government Securities (less interest on bank overdrafts) and capital employed covers investment n government securities also.

#### (ii) Net Profit Ratio:

$$\frac{Net\ Profit\ (after\ tax)\times 100}{Net\ Sales} = \frac{Rs.10,000\times 100}{Rs.3,00,000} = 3.33\%$$

Alternatively, 
$$\frac{Net Operating Profit \times 100}{Net Sales} = \frac{Rs.23,000 \times 100}{Rs.3,00,000} = 7.67\%$$

#### (iii) Current Ratio:

$$\frac{Current\ Assets}{Current\ Liabilities} = \frac{Rs.55,000}{Rs.30,000} = 1.83:1$$

or 
$$=\frac{\text{Rs.70,000}}{30,000} = 2.33:1$$

(Current Assets inclusive of Investment in Government Securities)

## (iv) Net Worth to Capital employed:

$$\frac{Net Worth}{Capital Employed} = \frac{Rs.1,00,000}{Rs.1,70,000} = 58.32\%$$

or = 
$$\frac{Rs.1,00,000 \times 100}{Rs.1,55,000}$$
 = 64.52%

## (v) Cost of Production to Capital Employed

$$\frac{Current of \ Production \times 100}{Capital \ Employed} = \frac{Rs.2,58,000 \times 100}{Rs.1,70,000} = 151.76\%$$
or = 
$$\frac{Rs.2,58,000 \times 100}{Rs.1,55,000} = 166.45\%$$

# Understanding and Analysis of Financial Statements

# Example 3.7: From the Final Accounts of Product Ltd. Given below, calculate the following:

(i) Gross profit ratio (ii) Current ratio, (iii) Liquid ratio; and (iv) Return on investment ratio.

Trading and Profit and Loss Account for the year ended 31" March, 2004

|                                                                                                                               | Rs.                                                          |                                              | Rs.                  |

| For Expenses<br>For Others                                                                                              | 2,000<br>8,000  | 10,000 48,000                     | Bills Receivable 1,000<br>Bank Balance 3,000                                                   | 25,000<br>48,000 |

#### Solution:

Gross Profit Ratio = 
$$\frac{Gross Profit}{Sales} \times 100$$

|                                  |          | Rs.    |
|----------------------------------|----------|--------|
| Sales Less: Material Consumption | 40.525   | 85,000 |
| Carriage Inwards                 | 49,575   | 1      |
| Carriage mwards                  | 1,425    | 51,000 |
| <u> </u>                         | <u> </u> | 34,000 |

Gross Profit Ratio = 
$$\frac{\text{Rs.34,000}}{\text{Rs.85,000}} \times 100 = 40\%$$

| Stock            | 14,000 |
|------------------|--------|
| Debtors          | 7,000  |
| Bills Receivable | 1,000  |
| Bank             | 3,000  |
| Current Assets   | 25,000 |

Current Ratio =  $\frac{Current \ Assets}{Current \ Liabilities}$ 

|   | _ |
|---|---|
| ю | c |
|   | _ |

| Sundry Creditors    | 10,000 . |
|---------------------|----------|
| Bank Overdraft      | 3,000    |
| Current Liabilities | 13,000   |

Current Ratio =  $\frac{Rs.25,000}{Rs.13,000} = 1.92:1$ 

Calculation of Liquid Ratio

Liquid ratio =

$$\frac{\text{Liquid Assets}}{\text{Current Liabilities}} = \frac{Current \ Assets - Stock}{Current \ Liabilities} = \frac{\text{Rs.25,000} - \text{Rs.14,000}}{\text{Rs.13,000}} = 0.84:1$$

Return on investment =  $\frac{Operating\ Profit}{Capital\ Employed} \times 100$ 

| KS     |
|--------|
| 15,000 |
| 400    |
| 1,500  |
| 16,900 |
|        |
|        |
| 900    |
| 16,000 |
|        |

| Share Capital,                          | 20,000 |
|-----------------------------------------|--------|
| General Reserve                         | 9,000  |
| l e e e e e e e e e e e e e e e e e e e | 6.000  |
| Profit & Loss A/c                       | 35,000 |
| Capital Employed                        |        |

Return on investment =  $\frac{Rs.16,000}{Rs.35,000} \times 100 = 45.71\%$ 

Example 3.8: The following data has been extracted from the annual accounts of a company:

(Rs. in takhs)

|                                                              | (ICS, III IGKIIS) |
|--------------------------------------------------------------|-------------------|
| Share Capital Divided into 20,00,000 Equity Shares of Rs. 10 | 200.00            |

| Provision for Taxation Proposed Dividends                    | 10.00             |

# Understanding and Analysis of Financial Statements

From the details given above calculate the following: (i) Return on capital employed; (ii) Return on net worth.

#### Solution:

#### (a) Calculation of Capital Employed

| <u></u>                      |      | -      |
|------------------------------|------|--------|
| Share Capital                | 200  | $\Box$ |
| General Reserve              | 150  |        |
| Investment Allowance Reserve | 1 50 | -      |
| 15% Long Term Loan           | 300  | -      |
| Capital Employed             | 700  | -      |

#### (b) Calculation of Return

| Profit before Tax                   | 140 |
|-------------------------------------|-----|
| Add: 15% Interest on Long Term Loan | 45  |
| Return                              | 185 |

#### (c) Calculation of Net Worth

| Share Capital        | 200 |
|----------------------|-----|
| General Reserve      | 150 |
| Investment Allowance | 50  |
| Reserve              | 400 |

#### (d) Return on Shareholders' Fund

| Profit before Taxation       | 140 |
|------------------------------|-----|
| Less: Provision for Taxation | 84  |
|                              | 56  |
| Return                       |     |

On the basis of the above the following ratios have been calculated:

(i) Return on Capital Employed = 
$$\frac{Return}{Capital Employed} \times 100 = \frac{185 \times 100}{700} = 26.4\%$$

(ii) Return on net worth = 
$$\frac{Return on shareholders funds}{Net worth} \times 100 = \frac{56 \times 100}{400} = 14\%$$

**Example 3.9:** From the following final accounts of XYZ Ltd. For the year ended 31" March 2004, you are required to calculate the following: (i) Acid test ratio; (ii) Stock Turnover ratio; (iii) Operating Ratio;

#### Balance sheet as on 31st March 2004

| Liabilities                                                                                  | Rs.                                                       | Assets                                                                            | Rs                                                        |
|----------------------------------------------------------------------------------------------|-----------------------------------------------------------|-----------------------------------------------------------------------------------|-----------------------------------------------------------|
| Share Capital (in shares of Rs. 10 each General Reserve Profit and Loss A/c Sundry Creditors | 5,00,000<br>4,00,000<br>1,50,000<br>2,00,000<br>12,50,000 | Land and Buildings Plant and Machinery Stock Sundry Debtors Cash and Bank Balance | 50.000<br>20,000<br>10,000<br>10,000<br>10,000<br>120,000 |

4-

| Opening Stock            | 2,50,000  |                      |           |
|--------------------------|-----------|----------------------|-----------|
| Purchases                | 10,50,000 | Sales                | 18,00000  |
| Gross Profit c/d         | 6,50,000  | Closing Stock        | 1,50,000  |
|                          | 19,50,000 | [                    | 19,50,000 |
| Admn. Expenses           | 2,30,000  |                      | 6,50,000  |
| Selling and Distribution | 1,00,000  |                      | 50,000    |
| Expenses                 |           | Gross Profit b/d     | 7,00,000  |
| Expenses of Financing    | 20,000    | Other Income (misc.) | }         |
|                          | 3,50,000  | ` ` `                | 1         |
| Net Profit               | 7,00,000  |                      | ]         |

#### Solution:

#### Working Notes:

- (i) Cost of Goods Sold = (Opening Stock + Purchases Closing Stock)
  - = Rs. 2,50,000+10,50,000 Rs. 1,50,000 = Rs. 11,50,000

or

- = Sales-Gross profit = Rs. 18,00,000-Rs 6,50,000 = Rs.11,50,000
- (ii) Operating Expenses = Administrative Exp. + Selling and Distribution Exp.

$$= Rs. 2,30,000+Rs. 1,00,000 = 2,30,000$$

(iii) Statement of Capital Employed

| Share Capital       | 5,00,000  |
|---------------------|-----------|
| General Reserve     | 4,00,000  |
| Profit and Loss A/c | 1,50,000  |
| Shareholders' Funds | 10,50,000 |

(iv) Average Stock =

$$\frac{Opening \, Stock + Closing \, Stock}{2} = \frac{\text{Rs.2.50,000} + \text{Rs.1.50,000}}{2} = \text{Rs.2,00,000}$$

#### Calculation of Ratios

(i) Acid Test Ratio = 
$$\frac{Liquid \ Assets}{Current \ Liabilities} = \frac{Rs.4,00,000}{Rs.2,00,000} = 2:1$$

(ii) Stock Turnover Ratio =

$$\frac{Cost of Goods Sold}{Average Stock at Cost} = \frac{Rs.11,50,000}{Rs.2,00,000} = 5.75 times$$

(iv) Operating Ratios = Coxt of Goods Sold + Operating Express × 100

Net Sales

#### $(Rs.11,50,000 + Rs.3,30,000) \times 100$ Rs.18,00,000

Fixed Assets to Net Worth Ratio =

Example 3.10: From the following data: (a) Current ratio (b) Quick ratio (c) Stock Turnover ratio (d) Operating ratio (e) Rate of return on equity capital.

#### Balance Sheet as on December 31, 2004

| Liabilities               | Rs.       | Assets                  | Rs.       |
|---------------------------|-----------|-------------------------|-----------|
| Equity Share Capital      | 10,00,000 | Plant and Machinery     | 6,40,000  |
| (Rs. 10 shares)           | }         | Land and Buildings      | 80,000    |
| Profit and Loss Account   | 3,68,000  | Cash                    | 1,60,000  |
| Creditors                 | 1,04,000  | Debtors                 | ] ;       |
| Bills Payable             | 2,00,000  | Less: Provision for Bad |           |
| •                         | 1         | Debts                   | 3,20,000  |
|                           |           |                         | 4,80,000  |
| Other Current Liabilities | 20,000    | Stock Prepaid Insurance | 12,000    |
|                           | 16,92,000 |                         | 16,92,000 |

## Income Statement for the year ending 31st December 2004

(Rs.) 40,00,000 Sales Less: Cost of good 30,80,000 9,20,000 Less: Operating expenses 6,80,000 Net Profit 2,40,000 Less: Income tax paid 50% 1,20,000 Net profit after tax 1,20,000

#### Solution:

 $\lambda_{p}^{i}$ 

Balance at the beginning of the year:

Debtors

Rs. 3,00,000

Stock

Rs. 4,00,000

(a)

Current Assets

Current Ratio Current Liabilities

| Current Assets                       | Rs.                                                    | Current Liabilities                               | Rs.                                        |
|--------------------------------------|--------------------------------------------------------|---------------------------------------------------|--------------------------------------------|
| Cash Debtors Stock Prepaid Insurance | 1,60,000<br>3,20,000<br>4,80,000<br>12,000<br>9,72,000 | Creditors Bills Payable Other Current Liabilities | 1,04,000<br>2,00,000<br>20,000<br>3,24,000 |

Current Ratio = 
$$\frac{9,72,000}{3,24,000} = 3:1$$

#### (b) Quick Ratio

Quick Ratio = 
$$\frac{Liquid\ Assets}{Current\ Liabilities}$$

#### Liquid assets

|         | Rs.      |
|---------|----------|
| Cash    | 1,60,000 |
| Debtors | 3,20,000 |
|         | 4,80,000 |

Liquid Ratio = 
$$\frac{4,80,000}{3,24,000}$$
 = 1.48:1

(c) Stock Turnover Ratio = 
$$\frac{Cost \ of \ goods \ sold}{Average \ stock}$$

$$cost \ of \ good \ sold = 30,80,000$$

Average stock =

$$\frac{Opening \, Stock + Closing \, Stock}{2} = \frac{4,00,000 + 4,80,000}{2} = 4,40,000$$
Stock Turnover ratio =  $\frac{30,80,000}{4,40,000} = 7 \, times$ 

(d) Operating ratio =

$$\frac{Cost \ of \ goods \ sold + Operating \ expenses}{Net \ Sales} \times 100 = \frac{30,80,000 + 6,80,000}{40,00,000} \times 100 = 94\%$$

(e) Rate of Return on equity capital

$$\frac{Net\ Profit\ after\ Tax}{Equity\ Share\ Capital} \times 100 = \frac{1,20,000}{10,00,000} \times 100 = 12\%$$

### Example 3.11 The capital of Growfast Co. Ltd. is as follows:

|                                 | <del></del> |
|---------------------------------|-------------|
| Preference shares of Rs.10 each | 50,00,000   |
| Equity share Rs. 100 each       | 70,00.000   |
|                                 | 1,20,00,000 |
|                                 |             |

#### Additional Information:

Profit after tax at 50% Rs. 15,00,000 Equity dividend paid 10% Depreciation Rs. 6,00,000 Market price per equity share Rs.200

Calculation the following: (i) The cover for the preference and equity dividends; (ii) The earnings per share; (iii) The price earnings ratio; (iv) The net funds flow.

#### Solution:

(1) Cover for the Preference and Equity dividends

$$\frac{Profit\ after\ tax}{Preference\ dividend} = \frac{Rs.15,00,000}{Rs.5,00,000 + Rs.7,00,000} = 1.25\ Time$$

# Understanding and Analysis of Financial Statements

#### (ii) Earning Per Share

$$\frac{Net\ Profit\ after\ Preference\ dividend}{Number\ of\ equity\ shares} = \frac{Rs.15,00,000 - Rs.5,00,000}{70,000} = Rs.14.29$$

#### (iii) Price Earnings Ratio

$$\frac{Market\ Price\ per\ share}{Earning\ per\ share} = \frac{Rs.200}{Rs.14.29} = 14\ Times$$

#### (iv) The net funds flow:

Profit after tax 15,00,000 Add: Depreciation 6,00,000 15,00,000+6,00,000 21,00,000

#### 3.6 SUMMARY

A large number of ratios are used to measure performance and exercise control. The ratios are used by all the stakeholders of the business viz., owners, managers, creditors, bankers, suppliers, government etc. The ratios are basically divided into five categories. The short and long term solvency ratios are used to judge the ability of the firm to meet it's financial obligations. Activity or turnover ratios are used to find out how effectively and efficiently the firm's resources are being used. Profitability ratios are used to gauge the profitability of the firm with reference to sales and assets. The market test ratios are used to gauge the firm performance in terms of share prices and dividends.

#### Liquidity Ratios:

| Current Ratio    | Current Assets                        |
|------------------|---------------------------------------|
|                  | Current Liabilities                   |
| Quick Ratio      | Current Assets - Inventory            |
|                  | Current Liabilities                   |
| Interval measure | Current Assets - Inventory            |
|                  | Average daily cash operating expenses |

#### Leverage Ratios:

| Total debt ratio     | Total debt                     |
|----------------------|--------------------------------|
|                      | Capital employed               |
| Debt-equity ratio    | Net worth                      |
| <u></u>              | Total debt                     |
| Capital-equity ratio | Capital employed or net assets |
|                      | Net Worth                      |
| Interest Coverage    | EBIDTA                         |
|                      | Interest                       |

### Activity Ratios:

| Inventory turnover       | Cost of goods sold or sales   |  |
|--------------------------|-------------------------------|--|
|                          | Inventory                     |  |
| No. of days, inventory   | 360                           |  |
|                          | Inventory turnover            |  |
| Debtors turnover         | Credits sales or Sales        |  |
| •                        | Debtors                       |  |
| Collection period        | 360                           |  |
|                          | Debtors turnover              |  |
| Assets turnover          | Sales                         |  |
|                          | Net assets or capital employd |  |
| Working capital turnover | Sales                         |  |
|                          | Net working capital           |  |

## Profitability Ratios:

| Gross margin                          | Gross profit Sales or EBIT Sales                                  |
|---------------------------------------|-------------------------------------------------------------------|
| Net margin                            | $\frac{Profit\ after\ tax}{Sales}\ or\ \frac{EBIT\ (1-T)}{Sales}$ |
| PAT to EBIT ratio                     | PAT<br>EBIT                                                       |
| Return on Investment (ROI) before tax | EBIT                                                              |
| •                                     | Net assets or capital employed                                    |
| Return on Investment (ROI) after tax  | EBIT (1 - Tax rate)                                               |
|                                       | Net assets or capital employd                                     |
| Return on Investment (ROI) before tax | EBIDTA                                                            |
|                                       | Total assets or Net assets                                        |
| Return on equity (ROE)                | Profit after tax                                                  |
| -                                     | Net worth                                                         |

There exists a relationship between various ratios. For example, ROE can be expressed as follows:

| ROE | Sales Net assets  Net assets  Net Worth |
|-----|-----------------------------------------|
|     |                                         |

# Understanding and Analysis of Financial Statements

# In practice companies calculate many other ratios. Most important ratios include:

| EPS                           | PAT No. of shares                          |
|-------------------------------|--------------------------------------------|
| DPS                           | Pr ofit distributed No. of shares          |
| Payout                        | DPS<br>EPS                                 |
| Price-earnings ratio          | Market value of share EPS                  |
| Market value-book value ratio | Market value of share  Book value of share |

## 3.7 SELF-ASSESSMENT QUESTIONS/EXERCISES

- 1) What are the different types of financial ratios?
- 2) Discuss the importance of liquidity ratios?
- 3) Define and evaluate various leverage ratios?
- 4) Discuss the important turnover ratios.
- 5) Explain the important profit margin ratios?
- 6) Compare the following: rate of return ratios, return on total assets ratios, and returns on equity?
- 7) Discuss key valuation ratios?
- 8) If the market price per share is equal to the book value per share, the following are equal, return on equity, price earning ratio, and total yield. Prove.
- 9) Write short notes on 'Debt Service Coverage Ratio'.
- 10) Explain proprietary ratio.
- 11) 'Ratios are indicators sometimes pointers but not in themselves powerful tools of management'. Explain.
- 12) Ratio analysis is only a technique for making judgments and not a substitute for judgments. Examine.
- 13) Write short notes on (i) Return on investments (ii) Pay-out Ratio.
- 14) Explain the limitations of ratio analysis for evaluating investment proposals and liquidity analysis.
- 15) Ratios are symptoms like blood pressures, the, pulse or the temperature of an individual'. Explain, also name and explain in brief the ratios made use to judge the long-term solveney of a concern.

- 16) Write short notes on 'Earnings per share'.
- 17) Distinguish between Operating Ratios and Turnover Ratio.
- 18) Ratio analysis is an important tool for judgement of the health of any organisation. Elaborate.
- 19) Write notes on uses and limitalions of 'Ratio Analysis'.

#### **PROBLEMS**

- 1) Premier Company's net margin is 5 per cent. The total return assets turnover ratio is 1.5 times, debt to total assets ratios is 0.7. What is the return on equity for premier?
- 2) McGill Inc. has a profit before tax of Rs.40 ml. If the company's times interest covered ratio is 6? What is the total interest charge?
- The following data applies to a firm.

| Interest Charges | Rs. 150,000   |  |
|------------------|---------------|--|
| Sales            | Rs. 7,000,000 |  |
| Tax Rate         | 60 per cent   |  |
| Net Profi⊾Margin | 6 рег селт    |  |

What is the firm's times covered ratio?

- 4) A firm's current assets and current liabilities are 600 and 1,500 respectively. How much can it borrow from a bank without reducing the current ratio given below 1.5? Justify.
- 5) A firm has a total annual sales of 1,000,000 and accounts receivable is collected if management want to reducing the accounts receivable to 120,0000?
- 6) Determine the sales of a firm with the following financir-

| Current Ratio             | 1.5     |
|---------------------------|---------|
| Acid-test Ratio           | 1.2     |
| Current Liabilities       | 800,000 |
| Inventory Turn Over Ratio | times   |

7) Complete the balance sheet and sales data (fill in the blanks) using the following financial data:

| Debt/Equity Ratio                                | 0.60        |
|--------------------------------------------------|-------------|
| Acid-Test Ratio                                  | 12          |
| Total Assets Turnover Ratio                      | 15          |
| Day's Sales Outstanding in Account<br>Receivable | 40 days     |
| Gross Profit Margin                              | 20 per cent |
| Inventory Turnover                               | 5           |

#### Balance sheet

| _                |                                                  |                         |
|------------------|--------------------------------------------------|-------------------------|
| Equity Capital   | 50,000                                           | Plant and Equipment     |
| Retained Earning | 60,000                                           | Inventories             |
| Troise Barrier B | <del>                                     </del> | Account Receivable Cash |

8) The 19X0-balance sheet and income statement for Omex limited is given below. Compute the financial ratios for Omex. Evaluate Omex performance with reference to the standards.

Omex limited balance sheet 31 December 2005 Liabilities and Equity

| KS.        |  |
|------------|--|
| 10,000,000 |  |
| 22,500,000 |  |
| 12,500,000 |  |
| 15,000,000 |  |
| 10,000,000 |  |
| 5,000,000  |  |
| 75,000,000 |  |
|            |  |

Omex

Return on Equity

# 3.8 SOLUTIONS/ANSWERS

## **Check Your Progress 1**

ŧ)

i) Current Ratio = 
$$\frac{Current \ Assets}{Current \ Liabilities}$$
$$= \frac{Rs.87,190}{Rs.22,500} = 3.88:1$$

Current Assets = Cash at Rank + Trade Debtors + Stock = Rs. 26,020 + Rs. 11,710 + Rs. 49,460 - Rs. 87,190

Current Liabilities = Creditors + Bills Payable = Rs. 16,000 + Rs. 6,500 = Rs. 22, 500

ii) Liquidity Ratio = 
$$\frac{Current \ Assets}{Current \ Liabilities}$$
$$= \frac{Rs.37,730(Rs.26,020+11,710)}{Rs.22,500} = 1.68:1$$

iii) Debt-Equity Ratio = 
$$\frac{Total\ Debts}{Shareholders'\ Funds}$$
  
$$\frac{Rs.1,22,500}{Rs.1,84,500} = 0.66:1$$

Total Debts = Debentures +Current Liabilities

$$= Rs. 1,00,000+Rs. 22,500 = R$$

Shareholders' Funds = Rs. 1,00,000+Rs. 84,500 - Rs. 1, 0

(iv) Proprietary Ratio = 
$$\frac{P \text{ oprietory Funds}}{Total \text{ Assets}}$$
$$\frac{\text{Rs.1,84,500}}{\text{Rs.13,07,000}} = 0.6:1$$

(v) Solvency Ratio = 
$$\frac{Total\ Debts}{Total\ Assets}$$
$$= \frac{Rs.1,22,500}{Rs.3,07,000} = 0.4:1$$

2) i) Capital Gearing Ratio = 
$$\frac{Variable Cost bearing Capital}{Fixed Cost bearing Capital}$$

$$= \frac{Rs.65;000}{Rs.1,00,000} = 65:1 \text{ lt is High Gearing}$$

į

### Variable Cost Bearing Capital

$$= Rs. 50,000 + Rs. 10,000 + Rs. 5,000 = Rs. 65,000$$

Fixed Cost Bearing Capital

= 
$$Rs. 30,000 + Rs. 70,000 = Rs. 1,00,000$$

ii) Liquidity Ratio = 
$$\frac{Liquid \ Assets}{Current \ Liabilities}$$
$$= \frac{Rs.30,000}{Rs.25,000} = 1.2:1$$

Liquid Assets = Debtors + Bank

(iii) Fixed Assets Ratio = 
$$\frac{Long term Funds}{Fixed Assets}$$
$$= \frac{Rs.I,65,500}{Rs.I,40,000} = 1.18:1$$

3)

۲.

i) Interest Coverage Ratio or Debt Service Ratio

$$= \frac{Net \ Profit \ before \ Interest \ and \ Tax}{Fixed \ Interest \ Charges}$$

$$\frac{Rs.1,56,370 + Rs.1,56,370 + 14,750}{Rs.14,750}$$

$$\frac{Rs.3,27,490}{Rs.14,750} = 22 \ times (Approx.)$$

ii) Debt to Cash Flow Coverage Ratio

Annual Cash Flow Before Interest and Tax

Interest + 
$$\frac{Sinking Fund Appropriations}{1 - Tax Ratc}$$

=  $\frac{Rs.1,56,370 + Rs.1,56,370 + Rs.14,750 + Rs.20,000}{Rs.14,750 + \frac{12,500}{1.50}}$ 

=  $\frac{Rs.3,47,490}{Rs.37,750}$  = 8. times (Approx)

I)

i) Current Ratio = 
$$\frac{Current \ Assets}{Current \ Liabilities}$$

$$= \frac{Rs.36,000 + 27,000 + 6,840 + 2,160}{Rs.70,200 + 1,800}$$

$$= \frac{Rs.72,000}{Rs.72,000} = 1:1$$

ii) Liquidity =  $\frac{Liquid \text{ or } Quick \text{ Assets}}{Current \text{ Liabilities}}$ 

• Ог

Quick Ratio or

$$\frac{Current \ Assets - (Stock + Prepaid \ Exp)}{Current \ Liabilities}$$

$$= \frac{Rs.72,000 - (Rs.36,000 + Rs.2,160)}{Rs.72,000}$$

$$= \frac{Rs.33,840}{Rs.72,000} = 0.47:1$$

#### Check Your Progress 3 -

1)

Stock Turnover Ratio = 
$$\frac{Cost \text{ of Goods Sold}}{Average Inventory \text{ at Cost}}$$
$$= \frac{Rs.41,520}{Rs.15,160} = 2.74 \text{ times}$$

Cost Goods Sold = Opening Stock + Purchases + Carriage Inward - Closing Stock = Rs. 15,920 + 39,000 + 4,000-14,400 = Rs. 44,520

Average Inventory 
$$= \frac{Opening\ Stock + Closing\ Stock}{2}$$
$$= \frac{Rs.15,920 + Rs.14,400}{2}$$
$$= \frac{Rs.30,320}{2} = Rs.\ 15,160$$

Average Number of days to Turnover = Day in a year
Inventory Turnover

Or Stock Velocity = 
$$\frac{365}{2.74}$$
 -133.21 or 133 days

Understanding and Analysis of Financial Statements

2)

Average Collection Period = 
$$\frac{Account \, Collection \, Periods}{Net \, Credit \, Sales} \times 365$$

$$= \frac{Rs.16,500 X 365}{Rs.1,09,500}$$

$$= 55 \, days$$
or
$$Average \, Collection \, Period = \frac{365}{Debtors \, Turnover}$$

$$= \frac{365}{6.64} = 55 \, days$$

$$Debtors \, Turnover$$

$$= \frac{Net \, Credit \, Sales}{Accounts \, Receivables}$$

$$= \frac{Rs.1,09,500}{16.500} = 6.64 \, times$$

(i) Calculation of Accounts Receivables:

(ii) Calculation of Net Credit Sales:

3)

Creditors Turnover 
$$= \frac{Net Credit Purchases}{Total Payable(Crs. + B/P)}$$
$$= \frac{Rs.7,30,000}{Rs.1,40,000}$$
$$= \frac{73}{14} = 5.21 \text{ times}$$

Average Payable Period = 
$$\frac{Total\ Payables}{Net\ Credit\ Purchases} \times 365$$

$$= \frac{Rs.1,40,000}{Rs.7,30,000} \times 365 = 70 \text{ days}$$
or
$$= \frac{Days\ in\ a\ Year}{Credit\ ors\ Turnover}$$

$$= \frac{365}{5.21} = 70 \text{ days}$$

(iii) The amount of provision for discount on creditors will not be deducted from the creditors.

4)

(i) Capital Turnover Ratio = 
$$\frac{Sales}{Capital \ Employed}$$
$$= \frac{Rs.1,60,000}{Rs.2,30,000} = 0.69 \text{ times}$$

 (ii) Capital Employed:
 1,60,000

 Fixed Assets
 Add: Current Assets:

 Debtors
 60,000

 Bills Receivables
 20,000

 Cash in Bank
 50,000

 30,000

Less: Current Liabilities:

| Creditors + B/P<br>(40,000 + 20,000)<br>Capital Employed | 60,000<br>2,30,000 | 70,000 |
|----------------------------------------------------------|--------------------|--------|
|                                                          | Or                 |        |

 Share Capital
 80,000

 Add: General Reserve
 30,000

 Profit and Loss A/c
 50,000

 Mortgage Loan
 80,000

 Less: Preliminary Expenses
 10,000

 2,30,000

(i) Fixed Assets Turnover Ratio = 
$$\frac{Sales}{Fixed \ Assets}$$
$$= \frac{Rs.1,60,000}{Rs.1,60,000} = 1 \text{ time}$$

(ii) Working Capital Turnover Ratio = 
$$\frac{Sales}{Working Capital} = \frac{Rs.I,60,000}{Rs.70,000} = 2.28 \text{ times}$$

(iii) Current Asset Turnover Ratio = 
$$\frac{Sales}{Current Assets}$$
$$= \frac{Rs.1.60.000}{Rs.1.30,000} = 1.23 \text{ times}$$

(iv) Total Assets Turnover Ratio = 
$$\frac{Saies}{Total \ Assets}$$
  
=  $\frac{Rs.1,60,000}{Rs.2,90,000} = 0.55$ 

#### Check Your Progress 4

I)

i) Gross Profit Ratio = 
$$\frac{Gross Profit}{Sales} \times 100$$

$$= \frac{Rs.3,84,000}{Rs.8,00,000} \times 100 = 48\%$$
ii) Operating Profit Ratio = 
$$\frac{Operating Profit}{Net Sales} \times 100$$

$$= \frac{Rs.2,80,000}{Rs.8,00,000} \times 100 = 35\%$$

#### Operating Profit:

iii) Operating Ratio =
$$\frac{Cost \ of \ Goods \ Sold + Operating \ Expenses}{Net \ Sales} \times 100$$

$$= \frac{Rs. 4,16,000 + Rs. 1,04,000}{Rs. 8,00,000} \times 100$$

$$= \frac{Rs. 5,20,000}{Rs. 8,00,000} \times 100 = 65\%$$

#### Cost of Goods Sold:

#### **Operating Expenses**

iv) a) Office Expenses Ratio=
$$\frac{Office Expenses}{Net Sales} \times 100$$
$$= \frac{Rs. 48,000}{Rs. 8,00,000} \times 100 = 6\%$$

b) Selling and Distribution Expenses Ratio:

$$\frac{Selling \ and \ Distribution \ Expenses}{Net \ Sales} \times 100$$

$$= \frac{Rs.56,000}{Rs.8,00,000} \times 100 = 7\%$$

c) Non-Operating Expenses Ratio =  $\frac{\text{Non-operating Exp}}{\text{Net Sales}} \times 100$  $= \frac{\text{Rs.3,400}}{\text{Rs.8,00,000}} \times 100 = 0.425\%$ 

v) Net Profit Ratio=
$$\frac{\frac{\text{Net Profit}}{\text{Net Sales}} \times 100}{\frac{\text{Rs.2,81,200}}{\text{Rs.8,00,000}} \times 100 = 35,15\%}$$

2)
$$Return on Capital Employed = \frac{\frac{Net Profit After Tax}{Capital Employed} \times 100}{\frac{Rs.1,50,000}{Rs.11,00,000} \times 100 = 13.63\%}$$

2) Return on Equity Shareholders' Funds:

$$\frac{\textit{Net Profit after tax} - \textit{Pref. Share Dividend Operating Profit}}{\textit{Equity Shareholders, Funds}} \times 100$$

$$= \frac{\text{Rs.1,50,000} - \text{Rs.16,000}}{\text{Rs.7,50,000}} \times 100 = 35\%$$

Return on Total Assets = 
$$\frac{Net \ Profit \ aftertax}{Total Assets} \times 100$$
$$= \frac{Rs.1,50,000}{Rs.11,25,000} \times 100 = 13.33\%$$

$$\frac{Net \ Profit \ after \ tax + Interest}{Total \ Assets} \times 100$$

$$= \frac{Rs.1,50,000 + Rs.23,500}{Rs.11,25,000} \times 100 = 15.42\%$$

$$= \frac{Rs.1,73,500}{Rs.11,25,000} \times 100 = 15.42\%$$

# Understanding and Analysis of Financial Statements

#### Check Your Progress 5

1) Dividend Yield on Equity Shares = 
$$\frac{Dividend Per ShareNet}{Marked Pr ice Per Share} \times 100$$
$$= \frac{Rs.2(20\% \text{ of } Rs.10)}{Rs.40} \times 100 = 5\%$$

$$\frac{\textit{Net Profit after tax} - \textit{Pref. Dividend}}{\textit{No. of Equity Shares}} \times 100$$

2) Earnings per Equity Share = 
$$\frac{Rs.2,70,000 - Rs.27,000}{Rs.80,000}$$
$$= \frac{Rs.2,43,000}{Rs.80,000} Rs.3.04$$

3) Price Earning Ratio = 
$$\frac{Market \, Price \, Per \, Share}{Earning \, Per \, Share} \times 100$$
$$= \frac{Rs.40}{Rs.3.04} \times 13.16:1$$

4) Dividend Pay-out Ratio = 
$$\frac{Dividend \ per \ share}{Earning \ Per \ Share} \times 100$$
$$= \frac{2}{Rs.3.04} \times 100 = 66\%$$

### COURSE INTRODUCTION

Financial Management and Accountancy MCS-035 is aimed at making you aware of the basic accounting procedures and financial management processes. In the real business world we are witnessing that more and more work is being computerised, but at the same time to make full use of computerised environment one should be aware of the underlying principle on which that particular application is based.

Block 1: Accounting System deals with the framework of accounting. In this block we are going to discuss about the scope and function of accounting in modern business. In addition to this we are also going to discuss about various accounting concepts which forms the basis of preparation of accounts. Accounting standards are the guidelines prescribed by various accounting bodies regarding the accounting treatment for various transactions. In the last part of this block we are going to discuss how to make Journal entries, post them into ledger and how to prepare trial balance of from the ledger balances.

Block 2: Understanding and Analysis of Financial Statements deals with preparation of final accounting statements. The first part of this block deals with the preparation and analysis of Profit and Loss A/c. In this we will also highlight the importance of income measurement and the importance of various contents of the Profit & Loss A/c. Fund Flow and Cash Flow statement helps to explain how the fund flows in business and the role of the working capital in the business. We are also going to discuss about the sources and uses of working capital and how to interpret changes in the working capital. In the last part of this block we are going to deal with ratio analysis. Ratio analysis is one of the most widely used analytic tool for financial analysis.

Block 3: Financial Management and Decisions deals with various aspects of financial management. In the first part of this block we deal with the evolution of financial management and how the role of financial management has changed over a period of time. In this unit we also discuss about the various functions which finance manager has to perform. The second part of this block deals with the time value of money and investment decisions. Time value of money is one of the fundamental principal of finance and based on this most of the financial decisions are taken. The last part of this block deals with working capital decisions in which we discuss about the operating cycle concept and the various determinate of the quantum of working capital. In addition to this we are also going to discuss about various methods to compute the e-working capital.

Block 4: Working Capital Management deals with the various sub components of working capital. In the first part of this block we are going to deal with cash and treasury management. Treasury management is basically concerned with management of liquidity, investment of surplus cash raising and deployment of funds and minimizing risks. The main objective of cash management is to maintain an optimum level of cash balance. Receivables management is basically concerned with speeding up of collection from debtors as well as deciding on various parameters of credit granting decision. The third unit of this block deals with inventory management. Since inventories use a significant part of the firm's resources, its effective management can reduce a lot of operational costs resulting into higher profits.

## **BLOCK INTRODUCTION**

4-101

This block is comprised of three units. It discusses the Accounting System that has wide implications for preparing the accounting statements.

The first unit gives an insight into the meaning and functioning of accounting. It determines the working area of accounting.

The second unit deals with various aspects of accounting concepts and standards.

The third unit subsequently explains how to record the transactions at the initial stages in the form of a journal, ledger, and trial balance. Here, the procedure of preparing them are also explained with suitable examples.

# UNIT 1 ACCOUNTING AND ITS FUNCTIONS

## 1.0 INTRODUCTION

Accounting is often called the language of business. The basic function of any language is to serve as a means of communication. In this context, the purpose of accounting is to communicate, or report the results of business operations and its various aspects. Though accounting has been defined in various ways. According to one commonly accepted definition, "Accounting is the art of recording, classifying and summarizing in a significant manner and in terms of money, transactions and events which are, in part at least, of financial character and interpreting the results thereof". Another definition which is less restrictive interprets accounting as "the process of identifying, measuring, and communicating economic information to permit informed judgements and decisions by the users of information".

## 1.1 OBJECTIVES

After studying the unit, you should be able to:

- the nature and role of accounting;
- the activities of an accountant; and
- the roles of accounting personnel and the accounting function in an organisation.

## 1.2 THE SCOPE OF ACCOUNTING

The scope of accounting can be presented in a diagrammatic form as shown in Figure 1.1.

Data creation and collection is the area which provides the necessary inputs for accounting system. The data collected is related to economic and financial transactions and 'historic' in the sense that it refers to transactions which have already taken place. Earlier, accounting was largely concerned with what had happened, rather than making any attempt to predict, and prepare for future.

After the historic data has been collected and related to various transactions, it is recorded in accordance with generally accepted accounting theory. All transactions or

events have to be entered in the books of original entry (journals) and ledgers in accordance with the classification scheme already decided upon. The recording and processing of information usually accounts for a substantial part of total accounting work. This type of activity in accounting may be called **recordative**. The methods employed for recording may be manual, mechanical or electronic. Computers are also used widely in modern business for doing job.

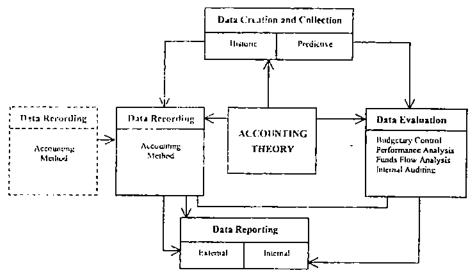

Figure 1: Scope of Accounting

Data evaluation is regarded as the most important activity in accounting these days. Evaluation of data includes controlling the activities of business with the help of budgets and standard costs (budgetary control), evaluating the performance of business, analysing the flow of funds, and analysing the accounting information for decision-making purposes by choosing among alternative courses of action.

The analytical and interpretative work of accounting may be for internal or external uses and may range from snap answers to elaborate reports produced by extensive research. Capital project analysis, financial forecasts, budgetary projections and analysis for reorganization, takeover or merger often (end to research-based reports.

Data evaluation has another dimension and this can be known as the auditive work which focuses on verification of transactions as entered in the books of account and authentication of financial statements. This work is done by public professional accountants. However, it has become common these days for even medium-sized organisations to engage internal auditors to keep a continuous watch over financial flows and review the operation of the financial system.

Data reporting consists of two parts-external and internal. External reporting refers to the communication of financial information (viz., earnings, financial and funds position) about the business to outside parties, e.g., shareholders, government agencies and regulatory bodies of the government. Internal reporting is concerned with the communication of results of financial analysis and evaluation to management for decision-making purposes.

You will note that accounting theory has been shown in the center of the diagram. We will turn to the role of accounting theory in the next unit. The central purpose of accounting is to make possible the periodic matching of costs (efforts) and revenues (accomplishments). This concept is the nucleus of accounting theory. However, accounting is moving away from its traditional procedure-based record-keeping function to the adoption of a role which emphasises its importance for various managerial decisions.

## Check Your Progress 1

List the various accounting activities that your organisation is undertaking. Can you ascribe any particular reason as to why your organisation is undertaking these accounting activities?

| Accounting Activity | Reason |
|---------------------|--------|
| 1                   | 1      |
| 2                   | 2      |

| 4 ,                 | 4      |
| 5                   | 5      |
| 6                   | 6      |
| 7                   | 7      |
| 8                   | 8      |

# 1.3 THE EMERGING ROLE OF ACCOUNTING

The history of accounting indicates the evolutionary pattern which reflects changing socio-economic conditions, and the enlarged purposes to which accounting is applied. In the present context, four phases in the evolution of accounting can be distinguished.

#### Stewardship Accounting

In earlier times in history, wealthy people employed 'stewards' to manage their property. These stewards rendered an account of their stewardship to their owners periodically. This notion lies at the root of financial reporting even today which essentially involves the orderly recording of business transactions, commonly known as 'book-keeping'. Indeed, the accounting concepts and procedures in use today for systematic recording of business transactions have their origin in the practices employed by merchants in Italy during the 15th century. The Italian method which specifically began to be known as 'double entry book-keeping' was adopted by other European countries during the 19th century. Stewardship accounting, in a sense, is associated with the need of business owners to keep records of their transactions, the property and tools they owned, as well as the debts they owed, and the debts others owed them.

#### Financial Accounting

Financial accounting dates from the development of large-scale business and the advent of the Joint Stock Company. This form of business which enables the public to participate in providing capital in return for shares in the assets and the profits of the company. This form of business organisation permits a limit to the liability of their members to the nominal values of their shares. This means that the liability of a shareholder for the financial debts of the company is limited to the amount he had agreed to pay on the shares he bought. He is not liable to make any further contribution in the event of company's failure or liquidation. As a matter of fact, the law governing the operations (or functioning) of a company in any country (for instance, the Companies Act in Indla) gives a legal form to the doctrine of stewardship which requires that information be disclosed to the shareholders in the form of annual income statement and balance sheet such statements are generally known as annual financial statements.

Briefly speaking, the income statement is a statement of profit and loss made during the year of the report; and the balance sheet indicates balances of the assets held by the firm and the monetary claims against the firm as on a particular date. The general unwillingness of the company directors to disclose more than the minimum information required by the law, and the growing public awareness have forced the governments in various countries of the world to extend the disclosure (of information) requirements.

The importance attached to financial accounting statements can be traced to the need of the society to mobilise savings, and channel them with profitable investments. Investors, whether they are large or small, must be provided with reliable and sufficient information in order to be able to make sound investment decisions. This is the most significant social purpose of financial accounting.

#### Cost Accounting

The industrial revolution in England presented a challenge to the development of accounting as a tool of industrial management. Costing techniques were developed as guides to management actions. The increasing awareness on the part of entrepreneurs and industrial managers of the benefits of using scientific principles of management in the wake of scientific management movement led to the development of cost accounting. Cost accounting is concerned with the application of costing principles, methods and techniques to ascertain the costs with a view to controlling them, and assessing the profitability and efficiency of the enterprise.

#### Management Accounting

The advent of management accounting was the next logical step in the developmental process. The practice of using accounting information as a direct aid to management is a phenomenon of the 20<sup>th</sup> century, particularly the last 30-40 years. The genesis of modern management, with its emphasis on detailed information on decision-making, provided a tremendous impetus to the development of management accounting.

Management accounting is concerned with the preparation and presentation of accounting and controlling information in a form which assists management in the formulation of policies, and in decision-making on various matters connected with routine and/or non-routine operations of business enterprise. It is through the techniques of management accounting that managers are supplied with information that they need for achieving objectives for which they are accountable. Management accounting has, thus, shifted the focus of accounting from recording and analysing financial transactions, to using information for decisions affecting the factor in this sense, management accounting has a vital role to play in extending the horizons of modern business. While the reports emanating from financial accounting, specially for outsiders, are subject to the conceptual and legal framework of accounting, internal reports—routine or non-routine—are free from such constraints.

#### Social Responsibility Accounting

Social responsibility accounting is a new phase in the development of accounting and owes its birth to increasing social awareness which has been particularly noticeable over the last two decades or so. Social responsibility accounting widens the scope of accounting by considering the social effects of business decisions, in addition to the economic effects. Several social scientists, statesmen, and social workers all over the world have been drawing the attention of their governments and the people in their countries to the danger posed to environment and ecology by unbridled industrial growth. The role of business in society is increasingly coming under greater scrutiny. The management is being held responsible not only for efficient conduct of business as expressed in profitability, but also for what it contributes to social well being and progress. There is a growing feeling that the concepts of growth and profit as measured in traditional balance sheets and income statements are too narrow to reflect the social responsibility aspects of a business.

#### **Human Resource Accounting**

Way back in 1964, the first attempt to include figures on human capital in the balance sheet was made by Hermansson which later came to be known as Human Resource Accounting (HRA). However there has been a great socio-economic shift in the 1990s with the emergence of the knowledge economy, a distinctive shift towards recognition of human and intellectual capital in contrast to physical capital. Human Resource Accounting is a branch of accounting which seeks to report and emphasis the importance of human resources (knowledgeable, trained, loyal and committed employees) in a company's earning process and total assets. It is concerned with "the process of identifying and measuring data about human resources and communicating this information to interested parties". In simple words, it involves accounting for investment in people and their replacement costs, as well as accounting for the economic values of people to an organisation. Generally, the methods used for the valuing and accounting of human resources are either based on costs, or on economic value of human resources. However, providing adequate and valid information on human assets (capital), which are outside the concept of ownership, in figures is very difficult. Nevertheless HRA is a managerial tool providing valuable information to the top management to take decisions regarding adequacy of human resources, and thus, encouraging managers to consider investment in manpower in a more positive way.

#### Inflation Accounting

Inflation Accounting is concerned with the adjustment in the value of assets (current and fixed) and of profit in the light of changes in the price level. In a way, it is concerned with the overcoming of limitations that arise in financial statements on account of the cost assumption (that is, recording of the assets at their historical, or original cost) and the assumption of stable monetary unit (these are discussed in detail in the next unit). It thus aims at correcting the distortions in the reported results caused by price level changes. Generally, rising prices during inflation have the distorting influence of overstating the profit. Various approaches have been suggested to deal with this problem in inflation accounting.

If this little introduction of HRA and Inflation accounting provokes you to know more about them, we suggest that you listen to the audio programme "Emerging Horizons in Accounting and Finance-Part II and III" which deal with these two topics. You may also read "Money Measurement Concept" and "Cost Concept" explained in the next unit which has a bearing on inflation accounting.

# 1.4 ACCOUNTING AS AN INFORMATION SYSTEM

While discussing the scope of accounting, you must have observed that accounting involves a series of activities linked with each other, beginning with collecting, recording, analysing and evaluating the data, and finally communicating information to its users. Information has no meaning unless it is linked to a certain purpose. It seems that accounting looks like a system that undertakes processing of collected data to generate necessary information for certain purpose.

Accounting as a social science can be viewed as an information system since it has all the features of a system. It has its inputs (raw data), processes (men and equipment), and outputs (reports and information). If we consider accounting as an information system, then we are in a position to make some important observations. First, the goal of the system is to provide information which meets the needs of its users. If we can correctly identify the needs of the users, we are then able to specify the nature and character of the outputs of the system. Second, it is the output requirements that determine the type of data that would be selected as inputs for processing into information output.

There are several groups of people who have a stake in a business organisation—managers, shareholders, creditors, employees, customers, etc. Additionally, the community at large has economic and social interests in the activities of such organisations. Such interests are expressed at the national level by the concerns of Government in various aspects of the firms' activities, such as their economic well-being, their contribution to welfare, their part in the growth of the national product, to mention only a few examples.

We shall now briefly discuss what the information needs of various users of accounting are.

Shareholders and Investors: Since shareholders and other investors have invested their wealth in a business enterprise, they are interested in knowing periodically about the profitability of the enterprise, the soundness of their investment and the growth prospects of the enterprise. Historically, business accounting was developed to supply information to those who had invested their funds in business enterprises.

Creditors: Creditors may be short-term or long-term lenders. Short-term creditors include suppliers of materials, goods or services. They are normally known as trade creditors. Long-term creditors are those who have lent money for a long period, usually in the form of secured loans. The main concern of the creditors is focused on the credit worthiness of the firms and its ability to meet its financial obligations. They are, therefore, concerned with the liquidity of the firms, its profitability and financial soundness. In other words, it can also be stated that creditors are interested mainly in information which deals with solvency, liquidity, and profitability so that they can assess the financial standing of the firm.

Employees: The view that business organisations exist to maximise the return to shareholders has been undergoing change as a result of social changes. A broader view is taken today of the economic and social role of management. The importance of harmonious industrial relations between management and employees cannot be overemphasised. The fact that the employees have a stake in the outcomes of several managerial decisions it recognised: Greater emphasis is on industrial democracy through employee participation in management decisions has important implications for the supply of information to employees. Matters like the settlement of wages, bonus, and profit sharing rest on adequate disclosure of relevant facts.

Government: In a mixed economy it is considered to be the responsibility of the Government to direct the operations of the economic system in such a manner that it subserves the common good. Controls and regulations on the operations of private sector enterprises are the hallmark of a mixed economy. Several Government agencies collect information about various aspects of the activities of business organisations. Much of this information is a direct output of the accounting system, for example, levels of outputs, profits, investments, costs, and taxes. All this information is very important in evolving policies for managing the economy. The task of the Government in managing the industrial economy of the country is facilitated if accounting information is presented, as far as possible, in a uniform manner. It is clear that if accounting information is distorted due to manipulations and window-dressing in the presentation of annual accounts, it will have ill-effects on the measures the Government intends to take, and the policies it wishes to adopt.

Management: Organisations may or may not exist for the sole purpose of profit. However, the information needs of the managers of both kinds of organisations are almost the same, because the managerial processes, i.e., planning, organising, and controlling are the same. All these functions have one thing in common, and it is that they are all concerned with making decisions which have their own specific information requirements. The emphasis on efficient and effective management of organisations has considerably extended the demand for accounting information. The role of accounting, as far as management is concerned, was highlighted earlier when we discussed about management accounting.

Consumers and others: Consumers' organisations, media, welfare organisations, and the public at large are also interested in accounting information in order to appraise the efficiency and social role of the enterprises in different sectors of the economy, that is, what levels of profits and outputs are being achieved, in what way the social responsibility is being discharged, and in what manner growth is being planned by the enterprises, in accordance with the national priorities.

The above discussion, perhaps, has indicated to you that the information needs of various users may not necessarily be the same. Sometimes, they may even conflict and compete with each other. In any case, the objective of accounting information is to enable information users to make optimum decisions.

# 1.5 THE ROLE AND ACTIVITIES OF AN ACCOUNTANT

Having discussed the scope of accounting and its emerging role, we are now in a position to describe who is an accountant. In an attempt to answer this question, we reproduce below some statements in this regard:

- a) An accountant is one who is engaged in accounts keeping.
- b) An accountant is a functionary who aids control.
- c) An accountant keeps the conscience of an organisation.
- d) An accountant is a professional whose primary duties are concerned with information management for internal and external use.
- e) An accountant is a fiscal adviser.
- f) An accountant produces an income statement and a balance sheet for an accounting period, and maintains all supporting evidence and classified facts that lead to the final accounting statements.
- g) An accountant verifies, authenticates, and cortifies the accounts of an entity.
- h) An accountant provides necessary information for various managerial decisions.

Tell us your reactions about the above statements. Perhaps you do have your own ideas, but our thinking is that each of the foregoing statements contains some truth in

it as it highlights some aspects of the functions of an accountant. Except for one statement which presents a somewhat competitive view, can you identify this statement? We will help you in doing this.

Statement (a) defines a person who maintains accounts. Statement (f) echoes almost a similar motion, but extends his role to the production of financial statements. The work implied in these statements is that of score-keeping and the person performing such activity is known as a financial accountant (or maintenance accountant).

Statements (b) and (h) are about the role which an accountant can play in the decision-making and the management control process. It is concerned with attention-directing and problem-solving. The functionary may be designated as management accountant (or controller, as in the United States).

Statement (e) underlines a narrow, specific role of an accountant, though of critical significance. In view of the high incidence of taxes on business in India, tax planning assumes a vital role in fiscal management. By planning the operations of the enterprise in a particular manner, the tax adviser attempts to minimise the liability of the firm by availing the concessions and incentives provided for in the applicable tax laws.

Statement (g) stresses the 'audit', 'watchdog', or 'certification role' of the accountant who is not an employee of a business but who performs an external verification of accounts. Such a functionary is a trained and qualified professional who, like any other professional, has an educational status and prescribed code of conduct. Chartered Accountants in India, England-Wales, and Certified Public Accountants in USA belong to this category of accountants.

Statement (c) presents the accountant as a conscience- keeper. He is seen as a person whose mission is to protect and promote the interest of the employer in a positive manner. He is there to see to it that none of the staff of the organisation carries on this work in an unethical way, or in a manner prejudicial to the long-term legitimate interests of the firm.

We are now left with statement (d) which defines an accountant as a professional and underlines his pre-occupation with management of information for internal use (management accounting function) and for external use (financial accounting function). We are sure our discussion of accounting as an information system has made it easier for you to comprehend this role of the accountant. We may clarify that information management is not necessarily associated with the sophisticated (or hitech) area of computers. Small firms may 'manage' information without a substantial degree of mechanisation, or automation. Often, the role of accounting in small business is not properly recognised. It is widely known that a large number of small businesses fail and do not survive beyond a few years. One of the main reasons for the failure is that they do not have adequate information system, to help their managers to control costs, to forecast cash needs, and to plan growth. Organisations which have poor accounting systems often find it considerably difficult to obtain finance from banks and other outside investors.

#### 1.6 ACCOUNTING PERSONNEL

There is hardly any organisation which does not have an accountant. His role is all pervasive, and he is involved in a wide range of activities, particularly in a large and complex organisation. The exact duties of an accountant might differ in different organisations. However, a broad spectrum of responsibilities can be identified.

The accountants can be broadly divided into two categories, those who are in public practice, and those who are in private employment. The accountants in public practice

Accounting and its Functions

offer their services for conducting financial and/or cost audit. As such, they are known as auditors. The auditor examines the books of account and reports on the balance sheet and profit and loss account of the company as to whether they give a true and fair view of the state of affairs of the company and its profit respectively. The auditor in a company is appointed by the shareholders to whom s/he reports. Public accountants are generally members of professional bodies like the Institute of Chartered Accountants of India. In addition to conducting a financial or cost audit (in accordance with the requirements of, say, the Companies Act), as the case may be, they may also provide advisory services for designing, or improving accounting and management control systems.

Accountants in employment may be in various business, or non-business organisations to perform a variety of accounting and management control functions. Accountants at higher levels generally belong to professional accounting bodies, but those who are at lower levels need not be so. Accounting chiefs in different organisations, depending upon their nature of work, are variously designated as finance officers, or internal auditors, or chiefs accounts officers, etc. The term 'controller' as the head of the accounting and finance function is not very popular in India, but of late, it is catching on. Several large organisations, both in the public and private sectors, have controllers. Let us get an idea of who these people are, and what they do.

Internal Auditor: An Internal Auditor is an employee of an organisation in contrast to an external auditor who is paid a fee for his services. An external auditor is not an employee of a company, and he is appointed to conduct what is known as statutory audit. The internal auditor is responsible for performing monitoring activities, and other services, including designing and operating the system of internal control, auditing the data reported to the directors of the company, and assisting external auditors. The head of the internal audit function reports directly either to the chief executive or to the audit committee of the Board of Directors.

Internal audit includes continuous verification of entries appearing in the books of account with the original vouchers and proper accounting assets. Further, it attempts to ensure that the policies and procedures regarding financial matters are being complied with. Internal auditing is also concerned with administering the system of internal checks so that mistakes, innocent or intentional, are prevented from taking place.

We should distinguish an internal auditor from an external auditor. While an internal auditor devotes his entire time and energy to the needs of one company (i.e., his employer), an external auditor serves many clients. The primary function of the external auditor, as pointed out earlier, is to safeguard the interests of the shareholders (by whom he is appointed) by an independent and impartial appraisal of the financial transactions of the company so that he could report on the net profit earned by the company and its financial position. His role is that of an objective outsider, expressing expert opinions to the financial condition and operating results of the client's business. Apart from shareholders, other parties such as banks, lending institutions, Government agencies, etc. rely on the fairness of such financial reports in making certain decisions about a given company. An auditor is bound by a set of professional regulations which include an examination on technical competence and adherence to a code of ethical conduct.

Controller: This is the other name for Chief Accountant and s/he is usually the head of the whole area of accounting, including internal audit. S/he is overall in-charge of all activities comprising financial accounting, cost accounting, management accounting, tax accounting, etc. S/he exercises authority both for accounting within the organisation and for external reporting. The external reports include reports to Government revenue collecting and regulatory bodies, such as the Company Law

Board and the Income Tax Department. S/he may also supervise the company's internal audit and control systems. In addition to processing historical data, s/he is expected to supply a good deal of accounting information to top management concerning future operations, in line with the management's planning and control needs. Besides, s/he is also expected to supply detailed information to managers in different functional areas (like production, marketing, etc.) and at different levels of the organisation, so as to assist them in decision-making.

We may enumerate the functions of the controller as follows:

- a) Designing and operating the accounting system
- b) Preparing financial statements and reports
- c) Establishing and maintaining systems and procedures
- d) Supervising internal auditing and arranging for external audit
- e) Supervising computer applications
- f) Overseeing cost control
- g) Preparing budgets
- Making forecasts and analytical reports
- i) Reporting financial information to top management
- j) Handling tax matters and ensure other legal compliances.

Treasurer: S/he is the custodian and manager of all the cash and near-cash resources of the firm. The treasurer handles credit reviews and sets policy for collecting receivables (debtors of the firm, to whom the firm has sold goods or services on credit). S/he also handles relationships with banks, and other lending or financial institutions.

The Financial Executive Institute (USA) makes the following distinction between controllership and treasureship functions:

#### Controllership

Planning and Control Reporting and Interpreting Evaluating and Consulting Tax Administration Government Reporting Protection of Assets Economic Appraisal

#### Treasurership

Provision of Capital Investor relations Short-term Financing Banking and Custody Credit and Collections Investment Insurance

Finance Officer: Finance is the lifeblood of business. Procuring financial resources and ensuring their judicious utilisation are the two important activities of financial management. Financial management includes four major decisions; investment decision, financing decision, dividend decision, and working capital decision. investment decision is perhaps the most important decision, because it involves allocation of resources. It is concerned with the future which, being uncertain, involves risk. How the firm is allocating its scarce resources and is planning growth will largely determine its value in the market place. Financing decision is concerned with determining the optimum financing mix, or capital structure. It examines the various methods by which a firm obtains short-term and long-term finances through various alternative sources. The dividend decision is concerned with questions such 25, how much of the profit is to be retained, and how much is to be distributed as dividends. For the smooth tunning of a .irm, we need some amount of working capital, and working capital decisions are concerned with ensuring the optimum amount and mix of working capital. The finance manager has to strike a balance between the current needs of the enterprise for cash, and the needs of the shareholders for adequate return. The financial management of a large company is usually the responsibility of the finance director who may be in place of, or in addition to the

Accounting and its Functions

controller. Often the finance manager and controller are inter-changeable terms, and only one of these tow positions may be found in a company. The finance manager, when there is a controller also in the organisation, is concerned with implementing the financial policy of the board of directors, managing liquidity, preparation of budgets and administration of budgetary control system, managing profitability, etc.

Though financial management is regarded as a separate area, this function is performed in several countries, including in India, by the accountant (or the financial controller). Several large organisations, however, have a financial executive besides the chief accountant. Often, finance and accounting functions are clubbed together in one person, in small organisations.

# 1.7 THE NATURE OF THE ACCOUNTING FUNCTION

Accounting is a service function. The chief accounting executive (by whatever name he is called) holds a staff position except within his own department where he exerts authority. This is in contradiction to the roles played by production or marketing executives who hold line authority. The role of the accountant is advisory in character. She works through the authority of the chief executive. The accounts and or finance department(s) do not exercise direct authority over one departments. In decentralised structure with a number of units and divisions, the accounting executive, however, exercises what is known as the functional authority over all the accounting staff deployed in different segments.

There are two facets to the role of the accountant. For top managers, s/he works as a watchdog, and for middle and lower level managers s/he acts as 'helper'. The watchdog role is usually performed through the 'score-keeping' task of accounting and reporting to all levels of management. The 'helper' role is usually performed through the task of directing managers' attention to problems, and assisting them in solving problems. Mutual understanding and rapport between the accountant and the manager, in the tasks of attention-directing and problem-solving, can be enhanced if the accountant and his staff frequently interact with the line managers and guide them in matters concerned with preparation of budgets and control documents with which they might not be conversant. This will instill confidence among line managers regarding the reliability of reports.

# 1.8 THE ORGANISATION FOR ACCOUNTING AND FINANCE

A typical organisation chart for accounting and finance is presented in Figure 2. You will note that the person at the helm of affairs is the Director (Finance) who is a member of the Board of Directors. Reporting to him may be one or more General Managers. If there is only one General Manager, s/he may be designated as General Manager (Finance), or General Manager (Finance and Accounts), or Controller or Financial Controller. In a large company, four or five (as shown in Figure 2) the Deputy General Managers incharge of different areas like systems and data processing, accounts, finance, internal auditing may report to him/her. Following the American pattern, a tendency has recently been observed among large companies, especially in the private sector, to designate General Manager (Finance) as President (Finance, or Finance and Accounts), and a Deputy General Manager as Vice-President. Each of these Deputy General Managers is assisted by a number of senior managers who look after different components of similar activities, e.g., financial accounting, tax planning and administration, management auditing, etc. Management audit is a comprehensive review of the various sub-systems of the organisation such as objectives and goals, structure, technical system, personnel policies, (including succession planning), control and coordination policies and procedures, adequacy and effectiveness of communication system, etc. This type of audit is usually done by 2

team of people comprising the internal resource persons drawn from various functional areas and an external management consultant.

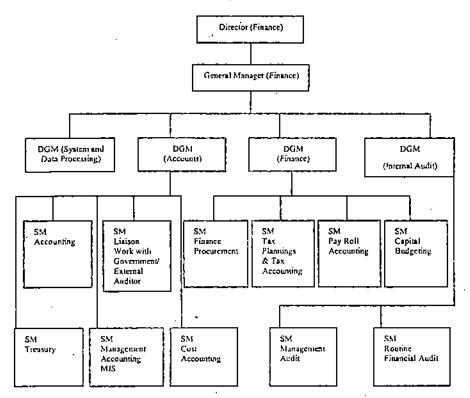

Figure 2: Organisation Chart for Accounting and Finance

We hope you now have a reasonably good idea of what accounting is, what its scope is, and what the different types of activities which are generally included in accounting. While basic functions of accounting and finance are performed in all types of organisations, their relative emphases or relevance might differ in different types of organisations. Keeping this in view, we have prepared an audio programme "Accounting and Finance in Different Types of Organisations", and we suggest that you listen to this tape. This will not only augment your familiarity with the basic aspects and functions of accounting, but will develop your appreciation for relative divergencies.

#### 1.9 SUMMARY

Accounting is an important service activity in business and is concerned with collecting, recording, evaluating and communicating the results of past events. The history of accounting development reflects its changing role in response to the changing business and social needs. With the emergence of management accounting, the focus of accounting has been shifting from the mere recording of transactions to that of aiding management in decisions.

Accounting can be perceived as an information system which has its input, processing methods, and outputs. The usefulness of accounting lies in its capacity to provide information to various stakeholders in business so that they can arrive at sound decisions.

The top accounting personnel are designated by various nomenclature. The practice in this regard differs in different companies. The organisational setting for the

accounting and finance function may also vary in different organisations, depending upon their peculiarities, nature and size of business, technology, and structural form. At the helm of affairs is usually the Director of Accounts and Finance who is a member of the Board of Directors. He is assisted by a General Manager who, in turn, is helped by Deputy General Managers in charge of various sub-functions, like accounts, finance, internal audit, and data processing, etc. Each of the sub-functions is further sub-divided into activities which are the responsibility of a subordinate manager.

#### 1.10 KEY WORDS

Accountant is a professional who is responsible for the processing of financial data for score-keeping, attention-directing, and problem solving purposes. Accounting is perceived as an Information System whose inputs are collected from various financial transactions entered into by a firm; it processes these inputs by proper classification and recording, and finally, generates output in the form of financial statements like Profit and Loss Account and Balance Sheet.

Attention-directing role of accounting consists of directing managerial attention to situations where corrective action is needed in the case of unfavourable (or even favourable) differences in operations, outputs or inputs.

Audit work of an accountant comprises authentication of accounting statements.

Control is the action that implements the planning decision, and evaluates performance.

Controller of the management accountant is a staff-functionary who uses accounting information for management planning and control.

External reporting is the production of financial statements for use by external interest groups like shareholders and Government.

Feedback comprises the performance reports which managers can use for improving their decision-making.

Information system is a system, sometimes formal and sometimes informal, for collecting, processing, and communicating data at the most relevant time to all levels of management. The data flowing through the system is helpful to managers for decision-making in the areas of planning and control, or is otherwise needed for financial reporting required under the laws. An essential requirement of the information system is feedback for needed modifications.

Planning is the identification and decision-making.

Recordative work extends to routine recording and classified posting of financial transactions and events.

Staff function is performed in an admory capacity, and without line or decision making authority.

Store-keeping is the process of data accumulation or record-keeping which enables interested parties (internal and external) to ascertain how the organisation is performing.

# 1.11 SELF ASSESSMENT QUESTIONS/EXERCISES

- "Financial Accounting is an extension of Stewardship Accounting".
- What new developments in Accounting have taken place over the past 20-25 years? Examine the main factors which have affected such developments.
- 3. Pick a group of persons having interest in a business organisation, and examine the nature of their information needs.
- 4. Discuss the role of accountants in modern business organisation.
- Differentiate between recordative, interpretative, and auditive functions of accounting.
- 6. How can accounting reports, prepared on a historical basis after the close of a period, be useful to managers in directing the activities of a business?
- 7. Distinguish management accounting from financial accounting.
- 8. How does the accountant help in the planning and control process of a large commercial organisation?
- 9. State whether the following statements are true or false:

| a)         | To have an accountant is the privilege of a joint stock company only.                                                     | True 🗌 False 🗌 |
|------------|---------------------------------------------------------------------------------------------------------------------------|----------------|
| <b>b</b> ) | A controller is entrusted with the responsibilities of raising funds.                                                     | True False     |
| c)         | Management control differs from engineering control since the latter is fully automatic and the former is highly complex. | True ☐ False ☐ |
| d)         | An accountant is the custodian of the properties and financial interests of a business enterprise.                        | True  False    |

Answers to Self-assessment Questions/Exercises

9. (a) False, (b) False, (c) True, (d) True,

# 2.0 INTRODUCTION

Any activity that you perform is facilitated if you have a set of rules to guide your efforts. Further, you find that these rules are of more value to you if they are standardised. When you are driving your vehicle, you keep to the left. You are in fact following a standard traffic rule. Without the drivers of vehicles adhering to this rule, there would be much chaos on the road. A similar principle applies to accounting which has evolved over a period of several hundred years, and during this time certain rules and conventions have come to be accepted as useful. If you are to understand and use accounting reports which is the end product of an accounting system then you must be familiar with the rules and conventions behind these reports.

# 2.1 OBJECTIVES

After going through this unit, you should be able to:

- appreciate the need for a conceptual framework of accounting;
- understand and appreciate the Generally Accepted Accounting Principles (GAAP), and
- develop an understanding of the importance and necessity for uniformity in accounting practices.

# 2.2 THE ACCOUNTING FRAMEWORK

The rules and conventions of accounting are commonly referred to as the conceptual framework of accounting. As with any discipline or body of knowledge, some underlying theoretical structure is required if a logical and useful set of practices and procedures are to be developed for reaching the goals of the profession, and for expanding knowledge in that field. Suel, a body of principles is needed to help answer new questions that arise. No profession can thrive in the absence of a theoretical framework. According to Hendriksen (1977), accounting theory may be defined as logical reasoning in the form of a set of broad principles that (i) provide a general frame of reference by which accounting practice can be evaluated, and (ii) guide the

ccounting Concepts and Standards

development of new practices and procedures. Accounting theory may also be used to explain existing practices to obtain a better understanding of them. But the most important goal of accounting theory should be to provide a coherent set of logical principles that form the general frame of reference for the evaluation and development of sound accounting practices.

The American Institute of Certified Public Accountants (AICPA) discusses financial accounting theory and generally accepted accounting principles as follows:

Financial statements are the product of process in which a large volume of data about aspects of the economic activities of an enterprise are accumulated, analysed, and reported. This process should be carried out in accordance with generally accepted accounting principles. Generally accepted accounting principles incorporate the consensus at a particular time as to which economic resources and obligations should be recorded as assets and liabilities by financial accounting, which changes in assets and liabilities should be recorded, when these changes should be recorded, how the assets and liabilities and changes in them should be measured, what information should be disclosed and how it should be disclosed, and which financial statements should be prepared.

Generally Accepted Accounting Principles (GAAP) encompass the conventions, rules and procedures necessary to define accepted accounting practice at a particular time......generally accepted accounting principles include not only broad guidelines of general application, but also detailed practices and procedures.

(Source: AICPA. Statements of the Accounting Principles Board No.4 "Basic Concept and Accounting Principles Underlying Financial Statement of Business Enterprises", October, 1970, pp.54-55).

The word 'principles' is used to mean a "general law or rule adopted or professed as a guide to action, a settled ground or basis of conduct or practice". You will note that this definition describes a principle as a general law or rule that is to be used as a guide to action. This implies that accounting principles do not prescribe exactly how each detailed event occurring in business should be recorded. Consequently, there are several matters in accounting practice that may differ from one company to another.

Accounting principles are man-made. They are accepted because they are believed to be useful. The general acceptance of an accounting principle (or for that matter, any principle) usually depends on how well it meets the three criteria of relevance, objectivity, and feasibility. A principle is relevant to the extent that it results in meaningful or useful information to those who need to know about a certain business. A principle is objective to the extent that the information is not influenced by the personal bias or judgement of those who furnished it. Objectivity connotes reliability or trustworthiness which also means that the correctness of the information reported can be verified. A principle is feasible to the extent that it can be implemented without undue complexity or cost.

# 2.3 ACCOUNTING CONCEPTS

Earlier, in unit 1, we had described accounting as the language of business. As with tanguage, accounting has many dialects. There are differences in terminology. In dealing with the framework of accounting theory, one is confronted with a serious problem arising from differences in terminology. A number of words and terms have been used by different writes to express and explain the same idea or notion. Thus, confusion abounds in the literature insofar as the theoretics: framework is concerned.

The various terms used for describing the basic ideas are; concepts, postulates, propositions, basic assumptions, underlying principles, fundamentals, conventions,

doctrines, rules, etc. Although each of these terms is capable of precise definition, general usage by the profession of accounting has served to give them loose and overlapping meanings. The same idea has been described by one author as a concept and by another as a convention. To take another instance, the idea implied in conservatism has been labelled by one author as a (modifying) convention, by another as a principle, and by yet another as a doctrine. The wide diversity in terminology to express the basic framework can only serve to confuse the learner.

Without falling into the trap of this terminological maze, we will explain below, some widely recognised ideas and we call all of these concepts. We do feel, however, that some of these ideas have a better claim to be called concepts, while the rest should be called conventions. Fundamental accounting concepts are broad, general assumptions that underlie the periodic financial accounts of business enterprises. The reason why some of these ideas should be called concepts is that they are basic assumptions and have a direct bearing on the quality of financial accounting information. The alteration of any of the basic concepts (or postulates) would change the entire nature of financial accounting.

#### Business Entity Concept -

In accounting we make a distinction between business and the owner. All the records are kept from the viewpoint of the business, rather than from that of the owner. An enterprise is an economic unit, separate and apart from the owner, or owners. As such, transactions of the business and those of the owners should be accounted for, and reported separately. In recording a transaction, the important question is how does it affect the business? For example, if the owner of a shop were to take cash from the cash box for meeting certain personal expenditure, the accounts would show that cash had been reduced even though it does not make any difference to the owner himself. Similarly, if the owner puts cash into the business, he has a claim against the business for capital brought in.

This distinction can be easily maintained in the case of a limited company because a company has a legal entity (or personality) of its own. Like a human being, it can engage itself in economic activities of producing, owning, managing, storing, transferring, lending, borrowing and consuming commodities and services. Distinction, however, is difficult in the case of partnership, and even more so in the case of a one-man business. Nevertheless, accounting still maintains separation of business and owner. This implies that, owner's personal and household expenses or obligations (e.g., expenditure on food, clothing, housing, entertainment, debts, mortgages, etc.) will not appear in the books of account. It may be clarified that it is only for accounting purposes that partnerships and sole proprietorships are treated as separate and apart from the owners though the law does not make such a distinction. A creditor would be justified in looking to both the business assets and the private estate of the owner for satisfaction of his claim. One reason for this distinction is to make it possible for the owners to have an account of the performance from those who manage the enterprise. The managers are entrusted with funds supplied by owners, banks, and others; they are responsible for the proper use of the funds. The financial accounting reports are designed to show how well this responsibility has been discharged

### Check Your Progress 1

| Apart from the reason mentioned above, can you think of any other reason for the justification of the Business Entity Concept? |

#### Money Measurement Concept

In accounting, only those facts which can be expressed in terms of money are recorded. As money is accepted not only as a medium of exchange but also as a measuring rod of value, it has a very important advantage since a number of widely different assets and equities can be expressed in terms of a common denominator. Without this adding heterogeneous factors like five buildings, ten machines, six trucks will not have much meaning.

While money is probably the only practical common denominator and a yardstick, we must realise that this concept imposes two sever limitations. In the first place, there are several facts which, though vital to the business, cannot be recorded in the books of account because they cannot be expressed in money terms. For example, the state of health of the Managing Director of a company, who has been the key contributor to the success of business, is not recorded in the books. Similarly, the fact that the Production Manager and the Chief Internal Auditor are not on speaking terms, or that a strike is about to begin because labour is dissatisfied with the poor working conditions in the factory, or that a competitor has recently taken over the best customer, or that it has developed a better product, and so on will not be recorded even though all these events are of great concern to the business.

From this standpoint, one could say that accounting does not give a complete account of the happenings in the business. You will appreciate that all these have a bearing on the future profitability of the company.

Second, the use of money implies that a rupee today is of equal value to a rupee ten years back or ten years later. In other words, we assume that there is a stable or constant value of the rupee. In the accounts, money is expressed in terms of its value at the time an event is recorded. Subsequent changes in the purchasing power of money do not affect this amount. You are, perhaps, aware that most economies today are in inflationary conditions with rising prices. The value of a rupee in the 80s has depreciated to an unbelievably low level in the 90s. Most accountants know fully well that the purchasing power of a rupee does change, but very few recognise this fact in

accounting books and make an allowance for changing price level. This is so, despite the fact that the accounting profession has devoted considerable attention to this problem, and numerous suggestions have been made to account for the effects of changes in the purchasing power of money. In fact, one of the major problem of accounting today is to find means of solving the measurement problem, that is, how to extend the quality and the coverage of meaningful information. It will be desirable to present, in a supplementary analysis, the effect of price level changes on the reported income of the business and the financial position.

|                                                                                                                                                                                                                                                                                                                                                            |
|                                                                                                                                                                                                                                                                                                                                                            |
|                                                                                                                                                                                                                                                                                                                                                            |

#### Continuity Concept

Accounting assumes that the business (an accounting entity) will continue to operate for a long time in the future, unless there is good evidence to the contrary. The enterprise is viewed as a going concern, that is, as continuing in operation, at least in the foreseeable future. The owners have no intention, nor have they the necessity to wind up or liquidate its operations.

This assumption is of considerable importance, for it means that the business is viewed as a mechanism for adding value to the resources it uses. The success of the business can be measured by the difference between output values (sales or revenues) and input values (expenses). Therefore, all unused resources can be reported at cost rather than at market values as, according to the continuity concept, the future instead of selling them out rightly in the market.

The assumption that the business is not expected to be liquidated in the foresecable future, in fact, establishes the basis for many of the valuations and allocations in accounting. For example, depreciation (or amortisation) procedures rest upon this concept. It is this assumption which underlies the decision of investors to commit capital to enterprise. The concept holds that continuity of business activity is the reasonable expectation for the business unit for which the accounting function is being performed. Only on the basis of this assumption can the accounting process remain stable and achieve the objective of correctly recording and reporting on the capital invested, the efficiency of management, and the position of the enterprise as a going concern. Under this assumption neither higher current market values nor liquidation values are of particular importance in accounting. This assumption provides a basis for the application of cost in accounting for assets.

However, if the accountant has good reasons to believe that the business, or some part of it, is going to be liquidated, or that it will cease to operate (say within a year or two), then the resources could be reported at their current values (or liquidation values).

|                                                                                                                                                                                                      |  |  |

#### Accrual Concept

The accrual concept makes a distinction between the receipt of cash, and the right to receive it, and the payment of cash and the legal obligation to pay it. In actual business operations, the obligation to pay and the actual movement of cash may not coincide. The accrual concept recognises this distinction. In connection with the sale of goods, revenue may be received (i)before the right to receive arises, or (ii) after the right to receive has been created. The accrual concept provides a guideline to the accountant as to how s/he should treat the cash receipt and the rights related thereto. In the former case the receipt will not be recognised as the revenue of the period for the reason that the right to receive the same has not yet arisen. In the latter case the revenue will be recognised even though the amount is received in the subsequent period.

Similar treatment would be given to expenses incurred by the firm. Cash payments for expenses may be made before or after they are due for payment. Only those sums which are due and payable would be treated as expenses. If a payment is made in advance (i.e., it does not belong to the accounting period in question) it will not be treated as an expense, and the person who received the cash will be treated as a debtor until his right to receive the cash has matured. Where an expense has been incurred during the accounting period, but no payment has been made, the expense must be recorded and the person to whom the payment should have been made is shown as a creditor.

The accounting year of a firm closes on 31st December each year. The rent for

#### The Concept of Conservatism

The concept of conservatism, also known as the concept of prudence, is often stated as "anticipate no profit, provide for all possible losses". This means an accountant should follow a cautious approach. Facing a choice, he should record the lowest possible value for assets and revenues, and the highest possible value for liabilities and expenses. According to this concept, revenues or gains should be recognised only when they are realised in the form of cash or assets (usually legally enforceable debts) the ultimate cash realisation of which can be assessed with reasonable certainty. Further, provision must be made for all known liabilities, expenses, and losses whether the amount of these is known with certainty, or is at best an estimate in the light of the information available. Probable losses in respect of all contingencies should also be provided for. A contingency is a condition, or a situation, the ultimate outcome of which-gain or loss-cannot be determined accurately at present. It will be known only after the event has occurred (or has not occurred). For example, a customer has filed a suit for damage against the company in a court of law. Whether the judgement will be favourable or unfavourable to the company cannot be determined for sure. Hence, it will be prudent to provide for likely loss in the financial statements. As a consequence of the application of this concept, net assets and incomes are more likely to be understated than overstated. Based on this concept is the widely advocated practice of valuing inventory (stock of goods left unsold) at cost or market price, whichever is lower. You will note that this convention, in a way, modifies the earlier cost concept. It should be stated that the logic of this convention has been under stress recently; it has been challenged by many writers on the ground that it stands in the way of fair determination of profit, and the disclosure of true and fair financial position of the business enterprise. The concept is not applied as strongly today as it used to be in the past. In any case, conservatism must be applied rationally as over-conservatism may result in misrepresentation.

|                                                                                                                                                                                                                                                                          |
|                                                                                                                                                                                                                                                                          |

#### Materiality Concept

There are many events in business which are trivial or insignificant in nature. The cost of recording and reporting such events will not be justified by the usefulness of the information derived. The materiality concept holds that items of small significance need not be given strict theoretically correct treatment. For example, a paper stapler costing Rs. 30 may last for three years. However, the effort involved in allocating its cost over the three-year period is not worth the benefit than can be derived from this operation. Since the item obviously is immaterial when related to overall operations, the cost incurred on it may be treated as the expense of the period in which it is acquired. Some of the stationery purchased for office use in any accounting period may remain unused at the end of that period. In accounting, the amount spent on the entire stationery would be treated as an expense of the period in which the stationery was purchased, notwithstanding the fact that a small part of it still lies in stock. The value (or cost) of the stationery lying in stock would not be treated as an asset and

carried forward as a resource to the next period. The accountant would regard the stock lying unused as immaterial. Hence, the entire amount spent on stationery would be taken as the expense of the period in which such expense was incurred. Where to draw the line between material and immaterial events is a matter of judgement and common sense. There are no hard and fast rules in this respect. Whether a particular item or occurrence is material or not, should be determined by considering its relationship to other items and the surrounding circumstances. It is desirable to establish and follow uniform policies governing such matters.

|                                                                                                                                                                                                                                                                        |
|                                                                                                                                                                                                                                                                        |
|                                                                                                                                                                                                                                                                        |
| Consistency Concept                                                                                                                                                                                                                                                    |

In practice, there are several ways to record an event or a transaction in the books of account. For example, the trade discount on raw material purchased may be deducted from the cost of goods and net amount entered in the books, or alternatively trade discount may be shown as the income with full cost of raw material purchased entered in the books. Similarly, there are several methods to charge depreciation (which is a decrease in the value of assets caused by wear and tear, and passage of time from an asset, or of valuing inventory. The consistency concept requires that once a company has decided on one method and has used it for some time, it should continue to follow the same method or procedure for all subsequent events of the same character unless it has a sound reason to do otherwise. If for valid reasons the company makes any departure from the method it has been following so far, then the effect of the change must be clearly stated in the financial statements in the year of change.

You will appreciate that much of the utility of accounting information lies in the fact that one could draw valid conclusions from the comparison of data drawn from financial statements of one year with data from another year. Comparability is essential so that trends or differences may be identified and evaluated. Inconsistency in the application of accounting methods might significantly affect the reported profit and the financial position. Further, inconsistency also opens the door for manipulation of reported income and assets. The comparability of financial information depends largely upon the consistency with which a given class of events are handled in accounting records year after year.

| ALL-100000000000000000000000000000000000                                                                                                                                                                                                          |
|                                                                                                                                                                                                                                                   |
|                                                                                                                                                                                                                                                   |
|                                                                                                                                                                                                                                                   |
| -                                                                                                                                                                                                                                                 |
|                                                                                                                                                                                                                                                   |
|                                                                                                                                                                                                                                                   |
|                                                                                                                                                                                                                                                   |
|                                                                                                                                                                                                                                                   |

#### **Periodicity Concept**

Although the results of the operations of a specific enterprise can be known precisely only after the business has ceased to operate, its assets have been sold off and liabilities paid off, the knowledge of the results periodically is also necessary. Those who are interested in the operating results of a business obviously cannot wait till the end. The requirements of these parties, therefore, force the accountant to report the changes in the wealth of a firm for some time periods. These time periods in actual practice vary, though a year is the most common interval as a result of established business practice, tradition, and government requirements. Some firms adopt the calendar year, and some others the financial year of the government. But more and more firms are changing to the 'natural' business year, the end of which is marked by relatively lower or lowest volume of business activity in the twelve-month period. The custom of using twelve-month period is applied only for external reporting. The firms usually adopt a shorter span of interval, say one month or three months, for internal reporting purposes.

The allocation of long-term costs and the difficulties associated with this process directly stem from this concept. While matching the earnings and the cost of those earnings for any accounting period, all the revenues and all the costs relating to the year in question have to be taken into account irrespective of whether or not they have been received in cash, or paid in cash. Despite the difficulties that arise in allocations and adjustments, short-term reports (i.e., yearly reports) are of such importance to owners, management, creditors, and other interested parties that the accountant has no option but to resolve such difficulties. Obviously, the utility of the periodic financial statements outweighs the difficulties.

Some other concepts, e.g., the Matching concept, the Realisation concept and the Dual Aspect concept are discussed in units 4 and 5, and as such, they have not been taken up here.

While going through all these concepts, probably you may have developed a feeling that they sometimes conflict with each other. You are right. We illustrate this by considering some of these concepts in the context of valuation of business properties. Suppose a firm acquired a piece of land in 1985 for a price of Rs. 6,00,000. Factory premises were constructed in 1986, and operations commenced in 1987. The firm has been successful in achieving the desired profit for the past year. The Balance Sheet (a statement of assets and liabilities) for the year 2005 is being prepared and 'Land' is required to be valued. The estimated current market price of this land is Rs. 60,00,000.

Should you recommend that the land be valued at Rs. 60 lakhs? The answer is 'no', obviously. Land would be carried on the Balance Sheet at its original cost of Rs. 6,00,000 only. This decision is supported by several of the concepts discussed in this section. In the first place, the stability of purchasing power of money implied in the money measurement concept prevents us from recognising accretion in values as a result of changing price levels. Then, the realisation concept will not allow unrealised profits to be included as long as land is held by the company and not sold away. You may note that the continuity, or going concern concept, makes any possible market value of land irrelevant for the balance sheet because the firm has to continue in business, and land will be needed by it for its own use. In this connection, it could be argued that if land were shown on the balance sheet at its estimated current market value, the owner might decide to discontinue the business, sell the land and retire. The principle of objectivity is now introduced into the argument. It can be easily seen that in a situation like this the cost of acquisition of land at Rs. 6,00,000 in 1985 is the objective fact because it is based on a transaction that actually took place and this objective evidence is capable of being verified. In contrast, the estimate of current market value figure may be suspect. It raises many questions. Do you have a market quotation for an identical plot of land? Has a similar plot of land been sold recently, and can we pick it up as verifiable evidence of the current market price? It

may be said that even if market price for an identical plot of land is not available, estimates by an accredited valuer may be accepted as verifiable evidence of the market price. Further complications may be noticed if buildings and facilities have been erected on the plot of land. Is it possible to estimate the value of land without factory buildings and other facilities constructed on it? The answer is a flat 'no', and the conservatism concept will then deter you from accepting an estimate of market value since it cannot be ascertained with reasonable accuracy.

# 2.4 ACCOUNTING STANDARDS

The basic concepts, discussed in the foregoing paragraphs, are the core elements in the theory of accounting. These concepts (postulates or conventions), however, permit a variety of alternative practices to co-exist. As a result, the financial results of different companies cannot be compared and evaluated unless full information is available about the accounting methods which have been used. The variety of accounting practices have made it difficult to compare the financial results of different companies. Further, the alternative accounting methods have also enabled, the reporting of different results, even by the same company.

Need for Standards: The information contained in published financial statements is of particular importance to external users, such as shareholders and investors. Without such information they would not be able to take the right decisions about their investments. As in several other countries, Parliament in India specified in the Companies Act, the type and minimum level of information which companies should disclose in financial statements. It is the responsibility of the accounting profession to ensure that the required information is properly presented. It is evident that there should not be too much discretion to companies and their accountants to present financial information the way they like. In other words, the information contained in financial statements should conform to carefully considered standards. Public confidence in accounting information contained in financial statements will grow if they are satisfied as to the logic, consistency and fairness of the figures shown therein. For instance, a company could incur a loss and still pay dividends by manipulating the loss into a profit. In the long run, this course may have a disastrous effect on the company and its investors.

You would be better able to appreciate the function of accounting standards by relating them to the basic purpose of financial statements, which is the communication of information affecting the allocation of resources. Ideally, such information should make it possible for investors to evaluate the investment opportunities offered by different firms and to allocate scarce resource to the most efficient ones. In theory, this process should result in the capital distribution of resources within the economy, and should maximise the potential benefit to society.

In this context, unless there are reasonably appropriate standards, neither the purpose of the individual investor, nor that of the nation as a whole, can be served. The purpose is likely to be served if the accounting methods used by different firms for presenting information to investors allow correct comparisons to be made. For example, they should not permit a company to report profits which result simply from a change in accounting methods rather than from increase in efficiency. If companies were free to choose their accounting methods in this way, the consequences might be that deliberate distortions are introduced, leading eventually to misapplication of resources in the economy. The relatively less efficient companies will be able to report fictitions profits, and as a result scarce capital of society will be diverted away from the more efficient companies which have adopted more strict and consistent accounting methods.

# 2.5 THE CHANGING NATURE OF GENERALLY ACCEPTED ACCOUNTING PRINCIPLES

Generally accepted accounting principles are usually developed by professional accounting bodies like American Institute of Certified Public Accountants (AICPA) and Institute of Chartered Accountants of India (ICAI). In developing such principles, however, the accounting profession has to reflect the realities of social, economic, legal and political environment in which it operates. Besides academic research, regulatory and tax laws of the government, e.g., Companies Act, 1956, income Tax Act, 1961, etc., in a large measure, influence the formulation of acceptable accounting principles. Stock exchanges and other regulatory agencies like the Securities and Exchange Board of India (SEBI) have laid down rules for disclosure and the extent of accounting information.

Since the environment, in which business operates, undergoes constant changes as a result of changes in economic and financial policies of the Government and changes in the structure of business, continued evaluation of the relevance of generally accepted accounting principles is required. In this sense, the principles of accounting are not ever-lasting truths. You will appreciate that it is the development of relevant accounting principles in tune with the present day needs of the society that would make it possible for the business enterprises to develop financial statements which would be acceptable and of value to the end users.

Now, we give you a brief account of the development of standards in the United Kingdom, the United States of America, India, and other countries.

# 2.6 ATTEMPTS TOWARDS STANDARDISATION

Standardisation in UK and USA: Though the Institute of Chartered Accountants in England and Wales began making recommendations since 1942, real progress started with the establishment of the Accounting Statements Committee (ASC) by the Institute in 1969 in the wake of public criticism of financial reporting methods which permitted diverse practices. As a result of diversity in practices some big investors had suffered heavy losses on their investments in well-known companies. The main objective of the ASC has been to narrow areas of difference and in the variety in accounting practices. The procedure used for standardisation is initiated by the issue of an "Exposure Draft" on a specific topic for discussion by accountants, and the public at large. Comments made on exposure draft are taken into consideration when drawing up a formal statement of the accounting methods for dealing with that specific topic. The statement is known as a Statement of Standard Accounting Practice (SSAP). Once the statement of standard accounting practice is adopted by the accounting profession (the fact that a statement has been issued by the Institute in itself signifies the acceptance by the profession), any material departure by any company from the standard practice in presenting its financial reports is to be disclosed in that report. So far, nineteen statements of standard accounting practice, in addition to some exposure drafts under consideration, have been issued by the ASC.

The need for evolving standards in the USA was felt with the establishment of Securities Exchange Commission (SEC) in 1933. The SEC is the Government agency that regulates and controls the issuance of, and dealings in, securities of the companies. A research-oriented organisation called the Accounting Principles Boards (APB) was formed in 1957 to spell out the fundamental accounting postulates. The Financial Accounting Standards Board (FASB) was formed in 1973. The FASB issues statements from time to time, articulating the generally accepted accounting principles. The constant support given by SEC to FASB pronouncements has given considerable credibility to its accounting policy statement. The FASB, till 1985, has

issued five statements of concepts and eighty-eight statements of financial accounting standards.

Standards at International Level: In view of the growth of international trade and multinational enterprises, the need for standardisation at the international level was felt. An International Congress of Accountants was organised in Sydney. Australia in 1972 to ensure the desired level of uniformity in accounting practices. Keeping this in view, the International Accounting Standards Committee (IASC) was formed and was entrusted with the responsibility of formulating international standards. All the member countries of IASC resolved to conform to the standards developed by IASC, or at least to disclose variations from recommended standards. After its formation in 1973, the IASC has issued 40 international accounting statement to date. Another professional body, the International Federation of Accountants (IFAC) was established in 1978.

Attempts have also been made in countries in the European Economic Community (EEC), and in Canada for standardisation of accounting practices regarding disclosure and consistency of procedures.

# 2.7 ACCOUNTING STANDARDS IN INDIA

With a view to harmonise varying accounting policies and practices currently in use in India, the Institute of Chartered Accountants of India (ICAI) formed the Accounting Standards Board (ASB) in April 1977 which includes representatives from industry and government. In line with the procedure followed in other countries, the preliminary drafts prepared by the study groups and approved by ASB are circulated amongst various external agencies, including the representative bodies of trade, commerce, and industry. So far, twenty eight standards have been issued by ASB, a brief description of which is provided in Appendix I to this unit.

The standards are recommendatory in nature in the initial years. They are recommended for use by companies listed on a recognised stock exchange and other large commercial, industrial, and business enterprises in the public and private sectors. We advise that you read all or at least some of these standards in order to get a feel of what these standards are all about. What are the policies and procedures of accounting that these standards aim to standardise and why? Do not worry if you are unable to understand some of the ideas or expressions contained in the standards. You may like to come back to these standards after you have been through all the blocks of this course, in order to have a better grasp of them.

Regarding the position in India, it has been stated that the standards have been developed we hout first establishing the essential theoretical framework. Without such a framework, it has been contended, any accounting standards and principles developed are likely to lack direction and coherence. This type of shortcoming also existed in the UK and USA, but then it was recognised and remedied a long time ago. In the United States, the first task which the FASB undertook was to develop a conceptual framework project which aimed at defining the objectives of financial reporting (a sample of which is presented in Appendix II). This was to be followed by the spelling out of concepts and standards establishing what have been frequently referred to as generally accepted accounting principles (GAAP). Any attempt to develop a conceptual framework regarding the objectives of reporting will have to take into consideration the answers to the following questions:

- i) Who are the users of financial reports?
- ii) What decisions do these user groups have to take?
- iii) What information can be provided that would assist them to take such decisions?

The objectives, as you have already noted, depend upon the economic, social, legal and political environment of the country.

At this point it will be useful for you to watch the video programme: Understanding Financial Statement-Part I.

#### 2.8 SUMMARY

Accounting as a field of study in its developmental process has evolved a theoretical framework consisting of principles or concepts over period of time. These concepts enjoy a wide measure of support from the accounting profession. That is why they are known as Generally Accepted Accounting Principles (GAAP). Several concepts, and their implications for business and information users, were discussed in this unit.

Since the accounting principles are broad guidelines for general application, they permit a wide variety of methods and practices. The lack of uniformity in accounting practice makes it difficult to compare the financial reports of different companies. Moreover, the multiplicity of accounting practices makes it possible for management to conceal economic realities by selecting those alternative presentations of financial result which allow earnings to be manipulated. The financial statements prepared under such conditions, therefore, may have limited usefulness for several users of information. This problem has been recognised all over the world and various professional bodies are engaged in the task of standardising accounting practices. There is a movement towards consensus building even at the international level. Such professional bodies, in fact, first look at the practices used by practising accountants. They then try to obtain a refinement of those practices by a process of consensus. It is in this manner that the theory of accounting is built. In India also, some headway has been made by establishing twenty eight standards for accounting practice.

### 2.9 KEY WORDS

Accounting framework includes generally accepted accounting principles (GAAP) on the basis of which accounting data is processed, analysed, and reported.

Accounting theory is a set of inter-related principles and propositions, which provide a general framework for accounting practice, and deal with new developments in the area.

Accrual concept says that an accountant should recognise incomes and expenses when they have actually accrued, irrespective of whether cash is received or paid. Consistency concept envisages that accounting information should be prepared on a consistent basis from period to period, and within periods there should be consistent treatment of similar items.

Conservatism concept forbids the inclusion of unrealisea gains but advocates provision for possible losses.

Cost Concept states that an asset is to be recorded in books of accounts at a price for, or at a cost incurred to acquire it.

Entity concept separates the business from owner(s), from the standpoint of accounting.

Going concern concept refers to the expectation that the organisation will have an indefinite life. This assumption has an important bearing on how the assets are to be valued.

Materiality concept admonishes that events of relatively small importance need not be given a detailed or theoretically correct treatment. They may be ignored for recording purpose.

Money measurement concept states that all transactions are to be recorded only in monetary terms and record only those transactions, which can be measured in money terms. It ignores intangibles like employee loyalty and customer satisfaction, as they cannot be expressed in money terms. It also assumes records on the basis of a stable monetary unit.

Objectivity principle requires that only the information based on definite and verifiable facts are to be recorded.

Periodicity concept divides the life of a business into smaller time periods which are generally one year, and the accountant is supposed to prepare necessary financial statements for each time period.

# 2.10 SELF ASSESSMENT QUESTIONS/EXERCISES

- Examine the role of the Entity accounting concepts in the preparation of financial statements.
- 2. Is it possible to give a true or a fair view of a company's position using accounting information?
- 3. Do you find any of the accounting concepts conflicting with each other? Give examples.
- 4. In what way can accounting information help in the proper allocation of resources?
- 5. Why should accounting practices be standardised? Explain.
- 6. What progress has been made in India regarding the standardisation of accounting practices?
- Answer whether the following statement are True or False:
  - a) The materiality concept refers to the state of ignoring small items from and values accounts.b) The generally accepted accounting principles ensure a uniform
  - accounting practice.

    c) The conservatism concept leads to the exclusion of all unrealised profits.
  - d) Statements of Standard Accounting Practice were formulated by the Financial Accounting standards Board of USA.
  - The Securities Exchange Commission of USA has played an important role in evolving the conceptual framework for accounting
- 8. Conceptual framework of accounting implies:
  - i) Making entries in the books of accounts
  - ii) A code of conduct for the accounting profession
  - iii) Géneral principles for the preparation of accounting information
  - iv) Planning and control of enterprise operations
  - v) None of the above.

- Accounting Standards are statements prescribed by:
  - i) Law
  - ii) Government regulatory bodies
  - iii) Bodies of shareholders
  - iv) Professional accounting bodies
  - v) None of the above.

#### 10. Accounting concepts are:

- i) Broad assumptions
- ii) Methods of presenting financial accounts
- iii) Bases selected to prepare a specific set of accounts
- iv) None of the above.
- 11. Name the accounting concept violated, in any of the following situations:
  - a) The Rs, 1,00,000 figure for inventory on a Balance Sheet is the amount for which it could be sold on the balance sheet date.
  - b) The Balance Sheet of a retail store which has experienced a gross profit of 40% on sales contains an item of merchandise inventory of Rs. 1,15,00,000: Merchandise inventory (at cost) Rs. 69,00,000.
  - c) Company M does not charge annual depreciation, preferring instead to show the entire difference between original cost and proceeds of sale as a gain or loss in the period when the asset is sold. It has followed this practice for many years.

#### Answers to Activities

- If the 'separate entity concept' is not observed, it becomes difficult to calculate
  the profitability of business and ascertain its financial position. It would be
  particularly difficult if the owner has several distinct businesses.
- Proprietary withdrawals reduce the capital of the enterprise unless they are in lieu of anticipated profits. It is not proper to show them as operating expense.
   They are also not admissible as deductions from profits for tax purposes.
- 3. Yes, because as per the entity concept the business and the proprietor are two separate entities. If the proprietor contributes some amount towards capital, it means that the business has a liability to return it to the proprietor.
- 4. No, the money measurement concept does not permit the recording of such events. What effect this event will have on the business cannot be objectively determined.
- Revaluation violates several concepts like, cost concept, conservatism concept, and continuity concept. To take credit for an extraordinary gain like this is normally not considered justified. However, were a substantial gap exists between the historical cost of a fixed asset and its market value, it has been observed that the accounting profession has been supporting such revaluations so that the balance sheet could show a realistic position of the enterprise.
- 6. As per the cost concept, the company should show the value of machinery in books of accounts at Rs 40,000 the price, which is being actually paid.
- 7. It should be taken into account, otherwise profit will be overstated.
- 8. It should be taken into account, otherwise profit will be understated.

- 9. No. Since the order is not actually obtained, the p. . Jable sales revenue could not be recognised as per the conservatism concept.
- 10. Though the table has a long-term life and as such can be shown as an asset, yet the materiality concept requires it to be treated as an expense.
- 11. It violates the consistency concept, unless there is a solid reason for departing from the earlier practice.

# Answer to Self-assessment Questions Exercises

- a) True b) Trué c) True d) False e) True.
- 8. (iii)
- 9. (iv)
- 10. (i)
- 11. (a) Conservatism concept, (b) Cost concept, (c) Periodicity concept.

# 2.11 FURTHER READINGS

Financial Accounting, Maheshwari, S.N. and S.K. Maheshwari, 2000, Vikas Publishing House: New Delhi (Chapter 2).

Accounting Principles, Anthony, Robert, N. and James Reece, 1987, All India Traveller Book Seller: New Delhi (Chapters 1-3).

Accounting. The Basis for Business Decisions, Meigs, Walter, B. and Robert F. Meigs, 1987, McGraw Hill: New York (Chapter 1).

Accounting Theory, Hendriksen, E. S., 1984, Khosla Publishing House, Delhi (Chapters 2,3 and 6).

#### Appendix I

#### Accounting Standards Board

The Institute of Chartered Accountants of India (ICAI) has, so far, issued twenty eight standards:

Framework for the Preparation and Presentation of Financial Statements

- (AS 1) Disclosure of Accounting Policies
- (AS 2) Valuation of Inventories
- (AS 3) Cash Flow Statements
- (AS 4) Contingencies and Events Occurring after the Balance Sheet Date
- (AS 5) Net Profit or Loss for the period, Prior Period, and Extraordinary Items and Changes in Accounting Policies

Announcement — Limited Revision to Accounting Standards (AS) 5

- (AS 6) Depreciation Accounting
- (AS 7) Accounting for Construction Contracts
  Revised Accounting Standard (AS) 7, Construction Contracts, 28-05-2002
- (AS 8) Accounting for Research and Development
- (AS 9) Revenue Recognition
- (AS 10) Accounting for Fixed Assets

Announcement — Status of certain provisions of AS 10, Accounting for Fixed Assets, pursuant to the issuance of AS 19, Leases and As 16, Borrowing Costs

- (AS 11) Accounting for the Effects and Changes in Foreign Exchange Rates
- (AS 11) (Revised 2003). The Effects of Changes in Foreign Exchange Rate 21-02-2003
- (AS 12) Accounting for Government Grants
- (AS 13) Accounting for Investments
- (AS 14) Accounting for Amalgamations
- (AS 15) Accounting for Retirement Benefits in the Financial Statement of Employers
- (AS 16) On Borrowing Costs
- (AS 17) Segment Reporting

Disclosure of corresponding previous year figures in the litst year of application of

Accounting Standards (AS) 17, Segment Reporting

Accounting Standard 18, Related Party Disclosures
Applicability of Accounting Standards (AS) 18, Related Party Disclosures

- (AS 19) Leases
- (AS 20) Earnings Per Share

#### Appendix II

Financial Accounting Standards Board (FASB)

Concepts No. 1: 'Objectives of financial reporting by business enterprises'.

The three objectives which are included in concept No. 1 are reproduced below:

- Financial reporting should provide information that is useful to the present and
  potential investors and creditors and other users in making rational investment,
  credit and similar decisions. The information should be comprehensible to those
  who have a reasonable understanding of business and economic activities and are
  willing to study the information with reasonable diligence.
- 2) Financial reporting should provide information to help present and potential investors and creditors and other users in assessing the amounts, timing, and uncertainty of prospective cash receipts from dividends or interest and the proceeds from the sale, redemption, or maturity of securities or loans. Since investors' and creditors' cash flows are related to enterprise cash flows, financial reporting should provide information to help investors, creditors and others, assess the amounts, timing, and uncertainty of prospective net cash inflows to the related enterprise.
- 3) Financial reporting should provide information about the economic resources of an enterprise, the claim to those resources (obligations of the enterprise to transfer resources to other entities and owners' equity), and the effects of transaction, events, and circumstances that change its resources and claims to those resources.

# UNIT 3 BASIC ACCOUNTING PROCESS: PREPARATION OF JOURNAL, LEDGER AND TRIAL BALANCE

### 3.0 INTRODUCTION

The Double Entry System was developed in the 15th century in Italy by Luca Pocioli. The Double Entry System is the basic framework of present day accounting. Every transaction has two aspects and according to this system, both the aspects are recorded. For example, if a business requires something then either it must have been given by someone or it must have been acquired by giving up something. On purchase of furniture, either the cash balance will be reduced, or a liability to the supplier will arise. This has been made clear already. The Double Entry System is so named since it records both the aspects of a transaction. This system has proved to be systematic, and has been found of great use for recording the financial affairs for all institutions requiring the use of money.

# 3.1 OBJECTIVES

After studying this unit, you should be able to:

- understand what is Double Entry System;
- understand how debit and credit are determined for business transactions;
- see classification of account as Personal and Impersonal accounts;
- learn the definitions of journal and ledger;
- learn the journalizing process;
- become familiar with the technique of ledger posting and how to balance an account, and
- understanding Trial Balance and the techniques to prepare it. See what is accounting cycle.

# 3.2 ACCOUNTING EQUATION

The whole structure of the Double Entry system is based on the Accounting Equation which explains the equal relationship between total claims and the total assets of the firm. Total claims include the claims of outsiders and of the proprietors. We can express the same as:

Assets = Total Claims Assets = Liabilities + Capital

If there is any change in the amount of assets, or of the liability, the owner's claim or the capital is bound to change correspondingly. It is totally based on Double Entry System principles.

#### The effect of transactions on Accounting Equation

#### 1. Start business with Rs. 2000 as capital

| Assets | = | Liabilities | +- | Capital |
|--------|---|-------------|----|---------|
| 2000   | = | 0           | +  | 2000    |
| 2000   | = | 2000        |    |         |

#### 2. Purchase furniture for Rs. 200 cash

| Assets           | =  | Liabilities | + | Capital |
|------------------|----|-------------|---|---------|
| Cash + Furniture | L. |             |   |         |
| 2700 + 200       | =  | 0           | + | 2000    |
| 2000             | =  | 2000        |   |         |

Note: On the purchase of furniture, the cash is reduced but another asset, furniture, is increased by the same value.

#### 3. Purchase goods for Rs. 300 on credit

| Assets                   | =   | Liabilities | + | Capital |
|--------------------------|-----|-------------|---|---------|
| Cash + Furniture + Goods | ļ   |             | j |         |
| 2700 + 200 + 300         | =   | 300         | + | 2000    |
| 2300                     | = . | 2300        |   |         |

#### 4. Paid Rs. 100 for rent

| Assets Cash + Furniture + Goods      | = | Liabilities | + | Capital             |
|--------------------------------------|---|-------------|---|---------------------|
| 2700 + 200 + 300<br>-100 (Rent Paid) | = | 300         | + | 2000<br>-100 (Rent) |
| 2600 + 200 + 300                     | = | 300         | + | 2900                |
| 3200                                 |   | 3200        |   |                     |

Note: Rent as an expense will be charged from capital, because all expenses and incomes are to be finally 'owned' by the proprietors as well as deducted from the cash, that a firm has.

#### 5. Sold goods of Rs.300 on credit for Rs. 400

| Assets                            | =  | Liabilities | +       | Capital    |
|-----------------------------------|----|-------------|---------|------------|
| Cash + Furniture + Goods+ Debtors | L  |             |         | <br>       |
| 2600 + 300 + (300 - 300) + 400    | =  | 300         | +       | 2900 + 100 |
|                                   | _i |             | <u></u> |            |
| 2600 + 300 + 400                  | -  | 300         | +       | 3000       |
| 3300                              | ÷  | 3300        | •       |            |

Note: The net increase in assets (400-300 = 100) will be added to the capital as a profit.

Whatever we have done above is suitable only if the number of transactions is small. But, if the number is large, a different procedure – putting increases and decreases in different columns – will be required, and be useful for yielding significant information.

The procedure for large number is followed for a form, which is called the T form. In this form, the two sides are put together. The left-hand side is called the Debit-side and the right-hand side is called the Credit-side. It is called an account. When in an account a record is made on the debit, or left hand side, one says the one has debited that account; similarly to record an amount on the right side is to credit it.

The proper form of an account is as follows:

Dr. Cr.

| Carrie Description (D)                                       |                |
|--------------------------------------------------------------|----------------|
| Livia   Darticulars   Ref 7   Amount   Date   Patuculais   D | tei.↑   Amount |
| Date Particulars Ref.* Amount Date Particulars R             |                |
|                                                              | Rs.            |

<sup>\*</sup>Ref. indicates the sources where information about the entry is available.

To put the entries in 'T' form account, we have to follow some standard rules of debit and credit:

- 1. When there is an increase in the amount of assets, its account is debited; and when there is a decrease in the amount of an asset, its account is credited. For example, on the purchase of furniture, the assets have increased and the furniture account will be debited. But if cash is paid for the purchase, the asset has decreased and the cash account will be credited.
- 2. When there is an increase in the amount of liability, its account will be credited; and when there is a decrease in the amount of liability, its account will be debited. For example, if we borrow some money from "A"; A's account will be credited. But if we pay the money back to "A", A's account will be debited since the liability no longer exists.
- 3. When there is an increase in the owner's capital; the capital account will be credited, and when there is a decrease in owner's capital, it will be debited. For example, if a proprietor introduces additional capital, the capital account will be credited. But, if the owner withdraws some money, the capital account will be debited.
- 4. Profit leads to an increase in the capital, and a loss leads to reduction. Since the impact of profit or loss can directly be seen on the capital, it is clear that the rule of capital will be applicable on profit / loss also. Profits may be directly credited, and losses may be similarly debited.

These rules can be summaries as below:

- 1. Increase in assets are debits; decrease in credits
- 2. Increase in liabilities are credits; decrease in debits
- 3. Increase in owner's capital are credits; decrease in debits
- 4. Increase in expenses/losses are debits; decrease in credits
- 5. Increase in revenue/income are credits; decrease in debits.

It should be noted that an increase in assets is favourable to the firm, but an increase in expenses is not so, even though, in both cases, the increase will be recorded on the debit side. Similarly, an increase in liabilities is not favourable, but an increase in revenue is, even though both will be recorded on the credit side.

Thus the terms debit and credit should not be taken to mean, respectively, favourable and unfavourable things, they merely describes the two side of an account.

The system of recording into debits and credits is based on a very important accounting concept – the Dual Aspect Concept. As per this concept, every transaction is viewed as one that has a dual aspect, that is, one aspect of transaction has an impact on the debit side, and another on the credit side. For example, if a firm purchases machinery of Rs.20,000 for cash, this transaction has a dual aspect – one that affects the debit side of the Machinery Account (assets have increased), and another affects the credit side of the Cash Account (assets have decreased). The implication of the dual aspect concept is that the total of all debits are always equal to the total of credits.

Basic Accounting Process: Preparation of Journal, Ledger and Trial Balance

# 3.3 CLASSIFICATION OF ACCOUNTS

As per the accounting equation, the broad categories of the account are:

- 1. Assets: Includes all the resources which the firm has.
- 2. Liabilities: Amounts that the firm owes to outsiders.
- 3. Capital: Amounts that the firm owes to the owners and proprietor who have invested in the firm.
- 4. Expenses: Amounts that have been spent, or even lost, in carrying on operations.
- Incomes: Amounts earned by the firm.

Accounts may be classified in another manner:

- 1. Personal Account: Personal accounts relate to personal, debtors, or creditors. Example ABC & Co., Ram Account, etc.
- Impersonal Accounts: Accounts that are not personal, such as Machinery account, Cash account, etc. These can be sub-divided as follows:
  - a) Real Account: Accounts which relate to assets of the firm, but not debt. For example, Machinery, Furniture, etc.

b) Nominal Account: Accounts, which related to expenses, losses, gains, revenue etc. like wages, salary, interest, commission etc. The net result of all the nominal accounts is reflected as profit or loss which is transferred to the capital account. Nominal accounts are, therefore, temporary.

On the basis of the above, three classifications of accounts, three basic rules about recording transactions are:

1... Personal account

# Debit the receiver and credit the giver

2. Real Account

#### Debit what comes in and credit what goes out

3. Nominal Account

# Debit all expenses/losses and credit all income/gains

#### Hence, a Debit denotes

- In case of a person, that s/he has received some benefit against which s/he has already rendered some service, or will render service in future. When a person becomes liable to do something in favour of the firm, the fact is recorded by debiting that person's account.
- 2. In case of goods or properties, that the stock and value of such goods or properties has increased; and
- In case of other accounts like salary or rent, that the firm has enjoyed some benefit, or has lost money.

#### A Credit denotes

- In the case of a person, that some benefit has been received from him, entitling
  him to claim from the firm, a return or a benefit in the form of cash, or goods, or
  services. In other words, when a person becomes entitled to money, or money's
  worth, for any reason, the fact is recorded by crediting him/her;
- In the case of goods or proprieties, that the stock and value of such goods, or properties has diminished; and
  - 3. In the case of other accounts like commission, that the firm has made a gain.

#### Illustration 1

- 1. Ram started business with Rs.10,000
- 2. He purchased furniture for Rs.2,000
- 3. Salary paid for Rs.100
- 4. Received interest Rs.50.

# Solution as per debit/ credit rules of accounting equation

| Explanation                                      | Accounts involved | Nature of accounts    | How<br>effected        | Dr.    | Cr.    |

# 3.4 DEFINITIONS OF JOURNAL AND LEDGER

Journal: Transactions are first entered in this book to show which account should be debited, and which credited. Journal is also called primary book, as it is a book of first entry. Transactions are recorded in it in chronological order.

Ledger: Accounts are prepared on the basis of entries made in the journal. The book, that contains the accounts is called a 'ledger'. A ledger is also called secondary book, as the entries in the ledger are made subsequent to the journal.

#### 3.4.1 The Journalising Process

Transactions are either written as they occur in the various documents, or papers, are filed, in the order in which transactions occur (chronological). On the basis of these records, first, one writes out which accounts are to be credited, and which accounts are to be debited. This is done in the Journal, the format of which is given below:

#### **JOURNAL**

| Date | Particulars | L.F. | Dr. Amount | Cr. Amount (5) |
|------|-------------|------|------------|----------------|
| (1)  | (2)         | (3)  | (4)        |                |
|      | A           |      | В          |                |

Note: The columns have been numbered for reference only.

- 1. In the first column, the date of the transaction is entered. The year is written at the top, then the month and in the narrow part of the column the date is entered.
- 2. In the second column, the name of the account to be debited is written first, and it is written close to the line marked (A). The word "Dr." is written near the line marked (B). In the next line the name of the account to be credited is written preceded by the word "To". This is written a few spaces away from the line (A). There must be an explanation of the entry and this should be recorded. This is known as narration. Narration records the facts leading to the entry and facilitates quick understanding.
- 3. In the third column, the number of the page in the ledger on which the account is written up is entered.

- 4. In the fourth column, the amounts to be debited to the various accounts concerned are entered. The amount is written in the extreme right hand side of the column.
- 5. In the fifth column, the amount to be credited to various accounts is entered in the extreme right hand side of the column.

Before one can journalise transactions, one must think from the basis of the rules, either from the five accounting equation rule, or from the three basic classification of accounts rules given above. In accordance with the rules/effects, the accounts to be debited, or credited will be determined. Then, the entry will be made in the journal as indicated above.

Illustration 2

Mohan's transactions for the month of April 05 are given below. Journalise them.

| 2005                                                                                                                                                                                                                                                                      | Rs.                                                    |

Basic Accounting Process: Preparation of Journal, Ledger and Trial Balance

Detailed discussion of the above solution:

April 1: Mohan started business with Rs.5,000
Firm received cash Rs.5,000 - Assets increases - Debited
Firm owes Rs.5,000 to proprietor - Capital increases - Credited.

April 2: Rs.500 is deposited in the bank
Bank balance increased - Assets increased - Debited
Cash balance reduced - Assets decreased - Credited

April 3: Furniture is purchased for cash Rs.200 Furniture purchased – Assets increased – debited Cash paid – Assets decreased – Credited

April 5: Purchased goods for cash Rs.400 Goods purchased – Assets increased – debited Cash paid – Assets decreased – Credited

April 8: Purchased goods on credit for Rs.1,000 from M/s Ram Narain Goods purchased – Assets increased – debited Firm owes Rs.1,000 to M/s. Ram Narain – Liability increases – Credited

April 16: Goods sold to M/s. Ram & Co. for cash Cash received – Assets increased – Debited Sale to merchandise is revenue item so it is to be Credited or On Sale stock decreases – assets decreases - Credited

April 24: Sold goods to Ramesh on credit for Rs.300 Ramesh owes + Assets increases - Debited Sale to merchandise is revenue item so it is to be Credited or On Sale stock decreases - assets decreases - Credited

April 28: Received cash from Ramesh Rs.300 Amount of cash increases- Assets increases - Debited Ramesh is no longer owes to firm - Assets decreases - Credited

April 30: Paid rent and salary
Services enjoyed - Expenses increases - Debited
Cash decreased - Assets decreased - Credited

<sup>\*</sup> When transactions of similar nature take place on the same date, they may be combined while they are journalized.

#### 3.4.2 Ledger Posting

The ledger is the most important book of accounts. It is the principal book of accounts and contains all the information regarding business. It is very difficult to prepare a final account in the absence of the ledger. The ledger provides the necessary information regarding various accounts. The personal account in the ledger shows how much money the firm owes to debtors, and how much money creditors owe to the firm. The real account shows the value of asset and the value of stock. Nominal accounts reflect the sources of income, and amount spent on various items.

Till now, with the help of journal entries, we are able to ascertain how the accounts are to be debited and credited and also the amounts involved. Through ledger posting we will learn how to prepare a summarized and classified form of all the accounts.

Consider the following entry

April 8 Furniture Account Dr. 500

To ABC Furniture & Co. 500

From the above journal entry, we will prepare two ledger accounts: the Furniture Account, and the ABC Furniture & Co.

While posting entries from journal to ledger, we have to remember the following:

Nowhere in a given account, will the name of that account will appear. For
example, if we are in a journal entry, then its ledger account will be credited with
the name of the debited account of journal entry.

Using the above rules, the posting of the given journal entry into the furniture account is done as follows:

Dr.

#### FURNITURE ACCOUNT

Cr.

| Date    | Particulars        | Amount   | Date | Particulars | Amount |
|---------|--------------------|----------|------|-------------|--------|
| 2005    |                    |          |      |             |        |
| April 8 | To ABC Furniture & | 500      |      |             | ,      |
|         | Co                 | <u> </u> |      |             |        |

Since the furniture account is debited in the journal entry, the furniture account is debited, but by writing the name of ABC Furniture & Co., appearing as credit item in journal entry. This ledger posting will be read as – The Furniture Account is debited by ABC Furniture & Co. just, as ABC Furniture & Co. Account is credited in the journal entry, the same will find an entry in its ledger account on credit side but with the name of Furniture Account; and it is shown below:

Dr.

#### ABC FURNITURE & Co.

Cr.

| Date | Particulars | Amount | Date    | Particulars  | Amount |
|------|-------------|--------|---------|--------------|--------|
|      |             |        | 2005    |              |        |
| i    |             | i      | April 8 | By Furniture | 500    |
|      | ļ           |        |         | Account      |        |

The above ledger posting will be read as: The ABC Furniture & Co. is credited by Furniture account.

The transactions, which have been journalized in illustration 2, are posted below.

#### 3.4.3 Balancing an Account

At the end of the each month, or year, or any particular day it may be necessary to ascertain the balance in an account. The difference between the total of two sides is said to be balancing figure. For instance, if the total of the debit side is Rs. I,000, and the total of credit is Rs. 850, then the balancing figure is Rs. 150 only. As the total of the debit side is greater than the total of credit side, the balancing figure is called the debit balance. The debit balance is written on the credit side as "By Balance C/d". C/d means carried down. By doing this, the two side will be balance. Then, this balance is written on the debit side as "To Balance B/d" (i.e., brought down). This is the opening balance for the new period. The similar, but reverse procedure is applied for credit balance. It should be noted that Nominal Accounts (such as rent, salary, etc.) are not balanced. The balance at the end of the accounting year are transferred to the profit and loss account. Only Personal and Real Accounts show balances.

#### Check Your Progress 2

- 1) 'Differentiate Between Real, Personal and Nominal Account.
- Identify Personal, Real and Nominal Accounts.
  - a. Cash Account
  - b. Sales Account
  - c. Capital Account
  - d. Purchase Account
  - e. Discount Account

- a. Salary A/c Dr
- To Cash A/c
- b. Ram A/c Dr
  - To Cash A/c To Discount A/c
- c. Purchase A/c Dr To Anil
- d. Cash A/c Dr
- To Capital A/c
  e. Machinery A/ c Dr.
  To Cash A/c
- 4) Record the following transactions in general journal and post them to ledger.
  - a. Commenced business with cash of Rs.50,000
  - b. Purchased goods for cash Rs. 16,000.
  - c. Paid rent for the month, Rs.2,000.
  - d. Purchased equipments for cash, Rs.6,000.
  - e. Paid miscellaneous expenses, Rs.2,600.
  - f. Paid creditors, Rs. 11,000.
  - g. Received Rs. 4,200 as commission.
  - h. Received from cash sales, Rs. 12,000.
- 5) On April I, 2005, Sanjeev established an enterprise under the name DP Sons. Transactions completed during the months were as follows:
  - a. Started business with cash Rs.60,000.
  - b. Opened a business bank account with a deposit of Rs.20,000.
  - Purchased sundry equipment for Rs.22,000, paying cash of Rs.15,000, and the balance on account.
  - d. Purchased supplies for the office for cash, Rs.1,500.
  - e. Paid creditors on account, Rs.3,000.
  - f. Paid office rent for the month, Rs.1,150.
  - g. Earned commission (in cash), Rs.9,000.
  - h. Paid miscellaneous expenses, Rs.25.
  - i. Withdrew cash Rs.2,700 from bank.

You are required to give entries in the general journal, and post them to ledger.

#### 3.5 TRIAL BALANCE

A statement which is prepared to show the debit balances and credit balances separately for each account is known as the Trial Balance. It is prepared after posting the accounts in the ledger, and the balance of each account has been found. It is prepared by listing each and every account, and entering their balances into separate columns of the debit and credit. The totals of the debit and credit columns of a trial balance must be equal. An equality indicates that the trial balance does not contain an arithmetical error. This follows from the fact that under the Double Entry System, the amount written on the debit side of various accounts is always equal to the amounts entered on the credit side of other accounts, and vice-versa. Hence, the total of the debit side must be equal to the total of credit side. Also, the total of the debit side balances will be equal to the total of the credit side balances. Once this agreement is established, there is reasonable confidence that the accounting work is free from arithmetical errors, though it is not proof of cent per cent accuracy, because some other error (such as principle and compensating errors) may still remain.

## 3.6 OBJECTIVES OF PREPARING TRIAL BALANCE

- The trial balance enables one to establish whether the posting and other
  accounting processes have been carried out without committing arithmetical
  errors.
- 2. Financial statements are normally prepared on the basis of agreed trial balance, otherwise the work may be cumbersome.
- 3. The trial balance serves as a summary of what is contained in the ledger.
- 4. Trial balance helps in locating errors in book-keeping work.

#### The Ruling of Trial Balance is given below:

#### TRIAL BALANCE

As at.....

| S.No. | Name of Account | Dr. Amount<br>(Total /Balance) | Cr. Amount<br>(Total /Balance) |
|-------|-----------------|--------------------------------|--------------------------------|
| ]     |                 |                                |                                |

9:

#### 3.6.1 The Total Method of Preparing the Trial Balance

In this, the total of each side of the account is entered respectively in the debit and credit columns of the Trial Balance. This is known as the Gross Trial Balance.

#### TRIAL BALANCE As at April 30, 2004

#### 3.6.2 The Balance Method of Preparing the Trial Balance

In this, balances are entered separately in the debit and credit columns of the Trial Balance. This is known as the Net Trial Balance.

Ť

#### TRIAL BALANCE As at April 30, 2004

Basic Accounting Process: Preparation of Journal, Ledger and Trial Balance

| S.No.    | Name of Account                          | L.F. | Dr. Amount<br>(Balance) | Cr. Amount (Balance) |

| .01      | Salary Account                           | -    | 200                     |                      |
|          | <u> </u>                                 |      | 6900                    | 6900                 |

#### 3.6.3 The Limitations of Trial Balance

One should note that the agreement of trial balance is not conclusive proof of accuracy. In simple words, in spite of the agreement of the trial balance some errors may remain. These may be of the following types:

- 1. The transactions has not been entered at all in the journal.
- 2. An incorrect amount has been written in both column of the journal.
- 3. An incorrect account has been mentioned in the journal.
- 4. An entry has not been completely posted in the ledger.
- 5. Entry is posted twice in the ledger.

#### 3.7 THE ACCOUNTING CYCLE

The accounting cycle is the sequence of procedures used to keep track of what has happened in the business, and to report the financial effect of those things. The following is a depiction of the steps in the accounting cycle, which helps an organization in maintaining their information system, and a description of each.

- 1. Transaction: Basically, a transaction is doing business. A financial transaction which is the kind of transaction we are interested in here, is doing something in a business that involves the exchange of money.
- 2. Business paper, or computer record: Usually, the accounting department is not where the transaction takes place. It is necessary that a paper, or computer record be prepared at the point of sale so that the accounting department is aware that a transaction has occurred.
- 3. Analyze: When personnel in accounting get a business paper, it is necessary to determine:
  - a. What happened?
  - b. What accounts will change?
  - c. How will they change?
  - d. Do they get a debit or credit?
- 4. **Journalize:** The journal that we will be discursing is called the general journal. Journals are also, called the 'book or original entry'.
- Post and Balance: Posting is the act of transferring the information in the journal
  to the appropriate accounts. Balancing is adding the increase to, and subtracting
  the decrease from the previous balance in an account.

#### Accounting System

- 6. Trial balance: Trial balance is a list of all the accounts and their balance where the total of Debit side should be equal to the total of Credit side.
- 7. Adjustments: Adjusting entries are made at the end of a period to ensure that revenues are reported when earned, and expenses reported when incurred.
- Adjusted Trial Balance: A trial balance after all adjustments have been analyzed, journalized, posted, and the affected accounts balanced.
- 9. Close: Closing an account means to 'bring the balance to zero'.
- 10. Prepare Financial Statements: Financial statements used to report the final position and results from operating a business. They are the balance sheet, the owner's equity statement, the income settlement, and the cash flow.

Similar to information technology process (input – process – output), the accounting cycle accepts data input- monetary transactions— which is processed according to pre-defined accounting principals, and the output is in the form of final accounts.

#### Check Your Progress 3

1) From the following transactions of M/s Divya Sharma & Co., write up the journal in proper form, post the ledger, and take out a trial balance.

- 2) What is trial balance? What are the objectives of preparing it?
- 3) Point out the errors disclosed by trial balance:
  - a) An item omitted from subsidiary records.
  - b) An error in balancing an account

2.0

- c) Correct amount posted to correct account.
- d) An error in carry forward of a total of one page to another page.
- 4) Prepare the trial balance for question numbers 4 and 5 (Check Your Progress 2).

#### 3.8 KEY WORDS

Basic Accounting Process: Preparation of Journal, Ledger and Trial Balance

Accounting Equation explains the equal relationship between total claims, and total assets of the firm.

Double Entry System: Every transaction has two aspects and according to this system, both the aspects are recorded.

Journal: Transactions are first entered in this book to show which account should be debited, and which one should be credited. The journal is also called a subsidiary book.

Ledger: Accounts are prepared on the basis of entries made in the journal. The book, that contains the accounts is called a 'ledger'. The ledger is also called the principal book.

Total Claims = Liabilities + Capital

"T" Form Account:, Two sides are put together, and the left-hand side is called the "Debit-side", while the right-hand side is called the 'Credit-side".

Trial Balance is a statement which is prepared to show the debit and credit balances separately.

#### 3.9 SUMMARY

The basic unit accounting procedure is a combination of various subunits. Double entry accounting system is a scientific system for recording transactions in which each transaction has its two effects—debit and credit. By this process the total of debit becomes equal to the total of credit. As per the accounting equation, transactions are: journalized on the basis of five elements (assets, liabilities, capital, expenses (loans), and revenue (profit)). Further, the accounts are classified by real and nominal account. Trial balance is prepared just to check the arithmetical accuracy of all the ledger accounts. It is drawn by taking the balances of all ledger accounts periodically, or at the end of the accounting period. In the accounting cycle, how transactions and events are recorded and processed to get final result is explained.

#### 3.10 SOLUTIONS / ANSWERS

#### Check Your Progress 1

- 1) a) Dr. b) Dr. c) Dr. d) Dr.
- 2) Assets = capital + liabilities
- 3) Every transaction has two aspects-The first is the debit and the other credit.

#### Check Your Progress 2

- Real accounts relate to assets of the firm where personal accounts relate to persons
  dealing with the firm, and nominal accounts related to expense, losses, gains and
  revenue etc.
- 2) a) Real b) Real c) Personal d) Real e) Nominal

#### Accounting System

- 3) a) Being salary paid in cash
  - b) Being payment made to Ram and discount allowed.
  - c) Being goods purchased on credit
  - d) Being the capital invested in cash
  - e) Being machinery purchased for cash.

# BLOCK INTRODUCTION

This block introduces you to the basic concepts and principles of financial management. This block consists of four units.

Unit 1 focuses on the scopes and functions of financial management. In this unit we will discuss the various facets of financial management which includes the objectives or goals of financial management. The organisation of finance function and task and the responsibilities of the finance manager are also discussed at the end of the unit.

Unit 2 deals with the concept of time value of money. It explains the different methods of calculating present and future value and discusses the use of present value technique in financial decisions.

Unit 3 discusses the nature and importance of capital investment decisions. Investment decisions are based on rigorous analysis of anticipated cash flows expected from investment activity. This analysis is based on the basic principles of compounding and discounting.

Unit 4 deals with the working capital decisions. In this unit we will discuss the concept of the operating cycle and the factors including working capital requirements. We will also discuss the various methods of estimating working capital requirements. Here are some suggested readings for further enhancing the knowledge demain.

#### 1.0 INTRODUCTION

Finance is the application of economic principles and concepts to business decision making and problem solving. The field of finance broadly consists of three categories: Financial Management, Investments and Financial Institutions.

- i) Financial Management: This area is concerned with financial decision making within a business entity. Financial management decisions, include maintaining optimum cash balance, extending credit, mergers and acquisitions, raising of funds and the instruments to be used for raising funds and the instruments to be used for raising funds etc.
- ii) Investments: This area of finance focuses on the behaviour of financial markets and pricing of financial instruments.
- iii) Financial Institutions: This area of finance deals with banks and other financial institutions that specialises in bringing supplier of funds together with the users of funds. There are three categories of financial institutions which act as an intermediary between savers and users of funds, viz., banks, developmental financial institution and capital markets.

Financial management is broadly concerned with the acquisition and use of funds by a business firm. The scope of financial management has grown in recent years, but traditionally it is concerned with the following:

- How large should a firm be and how fast should it grow?
- What should be the composition of the firm's asseis!
- What should be the mix of the firm's fine acing?
- \* How should the firm analyse, plan and control its financial affairs?

The past two decades have witnessed several rapid changes on the economic and corporate from which have an important bearing on how firms are run and managed

On the one hand we have witnessed economies of several countries opening up thereby throwing new opportunities and on the other hand we have also witnessed that the growth rate of developed countries are stagnating or even declining. The impact of these changes is that the firms have to move out of the saturated markets and explore new markets.

#### 1.1 OBJECTIVES

After going through this unit, you should be able to:

- understand the role and scope of financial management;
- understand the evolution of financial management;
- · understand the various decisions taken by financial managers, and
- understand the concept of economic and accounting profit.

#### 1.2 EVOLUTION OF FINANCIAL MANAGEMENT

The evolution of financial management may be divided into three broad phases:

- i) The traditional phase
- ii) The transitional phase
- iii) The modern phase.

In the traditional phase the focus of financial management was on certain events which required funds e.g., major expansion, merger, reorganisation etc. The traditional phase was also characterised by heavy emphasis on legal and procedural aspects as at that point of time the functioning of companies was regulated by a plethora of legislation. Another striking characteristic of the traditional phase was that, a financial management was designed and practiced from the outsiders point of view mainly those of investment bankers, lenders, regulatory agencies and other outside interests.

During the transitional phase the nature of financial management was the same but more emphasis was laid on problems faced by finance managers in the areas of fund analysis planning and control.

The modern phase is characterised by the application of economic theories and the application of quantitative methods of analysis. The distinctive features of the modern phase are:

- Changes in macro economic situation that has broadened the scope of financial management. The core focus is how on the rational matching of funds to their uses in the light of the decision criteria.
- The advances in mathematics and statistics have been applied to financial management specially in the areas of financial modeling, demand forecasting and risk analysis.

# 1.3 SIGNIFICANCE OF FINANCIAL MANAGEMENT

The main objective of financial management is, to make optimum utilisation of resources which results in maximum profits. The last five decades have witnessed rapid industrial development and policies of globalisation and liberalisation as a result of which financial activities have undergone tremendous changes. The success or the failure of business operations largely depends upon the financial policies pursued by

Introduction to Financial
Management

the firm; as Irwin Friend has said "a firm's success and even survival, its ability and willingness to maintain production and to invest in fixed or working capital are to a very considerable extent determined by its financial policies both past and present. In modern time where the ownership of firms is more dispersed, there is a separation of ownership and management and the firms are focusing toward social responsibility the role of financial management has spanned beyond planning and control". In the words of Ezra Soloman "Financial management is properly viewed as an integral part of overall management rather than as a staff specialty concerned with fund raising operations. In addition to raising funds, financial management is directly concerned with production, marketing and other functions within an enterprise where decisions are made about the acquisition or distribution of assets". The significance of financial management is discussed as follows:

- Determination of Business Success: Sound financial management leads to optimum utilization of resources which is the key factor for successful enterprises. If we analyse the factors which lead to an enterprise turning sick one of the main factors would be mismanagement of financial resources. Financial Management helps in preparation of plans for growth, development, diversification and expansion and their successful execution.
- 2) Optimum Utilisation of Resources: One of the basic objectives of financial management is to measure the input and output in monetary terms. Since finance managers are responsible for the allocation of resources, they are also responsible to ensure that resources are used in an optimum manner. In fact, the failure of business enterprise is not due to inadequacy of financial resources, but is the result of defective management of financial resources. In a country like India, where capital is scarce effective utilisation of financial resources is of great significance.
- 3) Focal Point of Decision Making: Financial management is the focal point of decision-making as it provides various tools and techniques for scientific financial analysis. Some of the techniques of financial management are comparative financial statement, budgets, ratio analysis, variance analysis, costvolume, profit analysis, etc. These tools help in evaluating the profitability of the project.
- 4) Measurement of Performance: The performance of the firm is measured by its financial results. The value of the firm is determined by the quantum of carnings and the associated risk with these carnings. Financial decisions which increases earnings and reduces risk will enhance the value of the firm.
- 5) Basis of Planning, Co-ordination and Control: Each and every activity of the firm requires resource outlays which are ultimately measured in monetary terms. The finance department being the nodal department is closely associated with the planning of most of the activities of the various departments. Since most of the activities of the firm require co-ordination among various departments, the finance department facilitates this co-ordination by supplying the requisite information. Since the result of various activities are measured in monetary terms, again the finance department is closely involved in control and monitoring activities.
- 6) Advisory Role: The finance manager plays an important role in the success of any organisations.
- 7) Information Generator for Various Stakeholders: In this modern era where business managers are trustees of public moder, it is expected that the firm provides information to the various stakeholders about the functioning of the firm. One of the major objectives of financial management is to provide timely information to various stakeholders.

## 1.4 PRINCIPLES OF FINANCIAL MANAGEMENT

The broad principles of corporate finance are:

- I) Investment Decision
- 2) Financing Decision
- 3) Dividend Decision
- 4) Liquidity Decision

#### 1.4.1 Investment Decision

The firm has scarce resources that must be allocated among competing uses. On the one hand the funds may be used to create additional capacity which in turn generates additional revenue and profits and on the other hand some investments results in lower costs. In financial management the returns, from a proposed investment are compared to a minimum acceptable hurdle rate in order to accept or reject a project. The hurdle rate is the minimum rate of return below which no investment proposal would be accepted. In financial management we measure (estimate) the return on a proposed investment and compare it to minimum acceptable hurdle rate in order to decide whether or not the project is acceptable. The hurdle rate is a function of riskness of the project, riskier the project higher the hurdle rate. There is a broad argument that the correct hurdle rate is the opportunity cost of capital. The opportunity cost of capital is the rate of return that an investor could earn by investing in financial assets of equivalent risk.

#### 1.4.2 Financing Decision

Another important area where financial management plays an important role is in deciding when, where, from and how to acquire funds to meet the firm's investment needs. These aspects of financial management have acquired greater importance in recent times due to the multiple avenues from which funds can be raised. Some of the widely used instruments for raising finds are ADRs, GDRs, ECBs Equity Bonds and Debentures etc. The core issue in financing decision is to maintain the optimum capital structure of the firm that is in other words, to have a right mix of debt and equity in the firm's capital structure. In case of pure equity firm (Zero debt firms) the shareholders returns should be equal to the firm's returns. The use of debt affects the risk and return of shareholders. In case, cost of debt is used the firm's rate of return the shareholder's return is going to increase and vice versa. The change in shareholders return caused by change in profit due to use of debt is called the financial deverage.

#### 1.4.3 Dividend Decision

Dividend decisions is the third major financial decision. The share price of a firm is a function of the cash flows associated with the share. The share price at a given point of time is the present value of future cash flows associated with the holding of share. These cash flows are dividends. The finance manager has to decide what proportion of profits has to be distributed to the shareholders. The proportion of profits distributed as dividends is called the dividend pay out ratio and the retained proportion of profits is known as retention ratio. The dividend policy must be designed in a way, that it maximises the market value of the firm's share. The retention ratio depends upon a host of factors - the main factor being the existence of investment opportunities. The investors would be indifferent to dividends if the firm is able to earn a rate or return which is higher than the cost of the capital. Dividends are generally paid in cash, but a firm may also issue bonus shares. Bonus share are shares issued to the existing shareholders without any charge. As far as dividend decisions are concerned the finance manager has to decide on the question of dividend stability, bonus shares, retention ratio and cash dividend.

S

#### 1.4.4 Liquidity Decision

A firm must be able to fulfill its financial commitments at all points of time. In order to ensure this the firm should maintain sufficient amount of liquid assets. Liquidity decisions are concerned with satisfying both long and short-term financial commitments. The finance manager should try to synchronise the cash inflows with cash outflows. An investment in current assets affect the firm's profitability and liquidity. A conflict exists between profitability and liquidity while managing current assets. In case, the firm has insufficient current assets it may default on its financial obligations. On the other hand excess funds result in foregoing of alternative investment opportunities.

|      |                                                                   |
|      |                                                                   |

# 1.5 OBJECTIVES OF FINANCIAL MANAGEMENT

For optimal financial decisions, it is essential to define objectives of financial management. These objectives serve as decision-criterion. Financing is a functional area of business and, therefore, the objectives of financial management must be in tune with the overall objectives of the business. The main objectives of business are survival and growth. In order to survive in the business and to grow, a business must earn sufficient profits. It must also maintain good relations with investors, employees, customers and other groups of society. Financial management of an organisation may seek to achieve the following objectives:

- ensure adequate and regular supply of funds to the business,
- provide a fair rate of return to the suppliers of capital,
- ensure efficient utilisation of capital according to the principles of profitability, inquidity and safety,
- devise a definite system for internal investment and thrancing,
- minimise cost of capital by developing a sound and economical combination of corporate securities.
- co-ordinate the activities of the finance department with the activities of other departments of the organisation.

Jonneial Management
 and Decisions

Generally, maximisation of economic welfare of its owners is accepted as the financial objective of the firm. But, the question is, how does one maximise the owners' economic welfare? Financial experts differ while finding a solution to this problem. There are two well known criteria in this regard:

- i) Profit Maximisation
- ii) Wealth Maximisation.

#### **Profit Maximisation**

The basic objective of every business enterprise is the welfare of its owners. It can be achieved by the maximisation of profits. Therefore, according to this criterion, the financial decisions (investment, financing and dividend) of a firm should be oriented to the maximisation of profits (i.e. select those assets, projects and decisions which are profitable and reject those which are not profitable). In other words, actions that increase profits are be undertaken and those that decrease profits are to be avoided. Profit maximisation as an objective of financial management can be justified on the following grounds:

- 1) Rational
- 2) Test of Business Performance
- 3) Main Source of Inspiration
- 4) Maximum Social Welfare
- 5) Basis of Decision-Making

#### **Drawbacks of Profit Maximisation Concept**

- 1) It is vague
- 2) It ignores time value of money
- It ignores risks
- 4) It ignores social responsibility

From the above description, it can be easily concluded that profit maximisation criterion is inappropriate and unsuitable as an operational objective of financial management. In imperfect competition, the profit maximisation criterion will certainly encourage concentration of economic power and monopolistic tendencies. That is why, the objective of wealth maximisation is considered as the appropriate and feasible objective as against the objective of profit maximisation.

We shall discuss this criteria in detail and arrive at a satisfactory conclusion to determine the goals or objectives of financial management.

#### Wealth Maximisation

The objective of profit maximisation, as discussed above, is not only vague and ambiguous, but it also ignores the two basic criteria of financial management i.e. (i) risk and (ii) time value of money. Therefore, wealth maximisation is taken as the basic objective of financial management, rather than profit maximisation. It is also known as 'Value Maximisation' or 'Net Present Value Maximisation'. According to Ezra Soloman of Stanford University, the ultimate objective of financial management should be the maximisation of wealth. **Prof. Irwin Friend** has also supported this view.

Wealth Maximisation means to maximise the net present value (or wealth) (NPV) of a course of action. It NPV is the difference between the gross present value of the benefits of that action and the amount of investment required to achieve those benefits. The gross present value of a course of action is calculated by discounting or capitalising its benefits at a rate which reflects their timings and uncertainty.

11

#### Superiority of Wealth Maximisation

We have discussed the goals or objectives of financial management. Now, the question arises as to the choice i.e., which should be the goal of financial management in decision—making i.e., profit maximisation or wealth maximisation. In present day changed circumstances, wealth maximisation is a better objective because it has the following points in its favour:

- It measures income in terms of cash flows, and avoids the ambiguity now
  associated with accounting profits as, income from investments is measured on
  the basis of cash flows rather than on accounting profits.
- It recognises time value of money by discounting the expected income of different years at a certain discount rate (cost of capital).
- It analyses risk and uncertainty so that the best course of action can be selected from different alternatives.
- It is not in conflict with other motives like maximisation of sales or market value of shares. It helps rather in the achievement of all these other objectives.

Therefore, maximisation of wealth is the operating objective by which financial decisions should be guided.

# 1.6 ECONOMIC PROFIT VS. ACCOUNTING PROFIT

Economic profit is the difference between revenues and costs where costs include both the actual businesses costs (the explicit costs) and the implicit costs. The implicit costs are the payments that are necessary to secure the needed resources, the cost of capital. Accounting profits is the difference between revenues and costs recorded according to accounting principles. The implicit cost-opportunity cost and normal profits which reflects the uncertainty and timing of future cash flows are not taken into consideration in according profits.

#### Economic Value Added

- i) Calculate the firm's operating profit
- ii) Calculate the cost of capital
- iii) Compare operating profit with cost of capital.

A related measure of economic profit is market value added (MVA), which focuses on the market value of capital as compared to the educ of capital.

- Calculate the market value of capital
- Calculate the amount of capital invested.
- Compare the market value of capital with capital invested.

In theory market value added is the present value of all expected future economic profits.

In a nutshell financial decisions are concerned, with the firm's decision to acquire and dispose off assets and commitment of finds on a continuous basis. Financial decisions affect the size, growth, profitability, risk and ultimately, the Value of the firm.

#### 1.7 AGENCY RELATIONSHIP

When firms are small they usually function as sole proprietorship firms or partne, hip firms where owner/partners make the decisions. As the volume and complexity of

business increases the sole proprietorship partnership firms convert themselves into public limited companies or joint stock companies. With increased geographical spread and other complexities often it is not possible for owners to look after all the aspects of the business. The decision making power is delegated to the managers (agents). An agent is a person who acts for, and exerts power on behalf of another person or group of persons. The person (or group of persons) whom the agent represents is referred to as the principal. The relationship between the agent and the principal is an agency relationship. There is an agency relationship between the managers and shareholders of a company.

#### 1.7.1 Problems Related with Agency Relationship

In an agency relationship the agent is charged with the responsibility of acting for the principal and in the best interest of the principal. But, it is possible that the agent may act in a fashion which serves his/her own solf-interest rather than that of the principal. In recent years we have witnessed numerous corporate frauds i.e. Euron, Xerox, etc., where the agents had misappropriated the authority vested in them by the principal. The problems associated with agency relationship can manifest itself in many ways. The most common being the misuse of power and authority by the managers, which includes financial misappropriation, using the funds of the company for the personal self (fringe benefits) etc. In case the reward and compensations are based on certain parameters, for example sales; managers may indulge in practices which would yield result in the short run but prove detrimental in the long run, i.e., overstocking the various intermediaries in the supply chain, offering huge discounts, dumping of goods in the territory of another manager etc. Another facet of this problem is, where managers put a little effort towards expanding and exploring the market for new business. In a nutshell the problems with agency relationship is that the managers act in a fashion which serves their own interest rather than that of the shareholders.

#### 1.7.2 Costs of the Agency Relationship

In order to minimise the potential for conflict between the principal's interest and the agent's interest certain costs are to be incurred by the principal as well as the agent and the cumulative effect of these costs is referred to as the agency costs. Agency costs are of three types: monitoring costs, bonding costs and residual cost.

#### Monitoring Costs

These are the costs incurred by the principal to monitor and limit the actions of the agent. In companies the shareholders may require the managers to periodically report on their activities via audited financial statements. The cost of resources spent on preparing these statements is monitoring cost. Another example is the implicit cost incurred when the principal limits the decision making power of the agent; by doing so, the principal may miss profitable investment opportunities. The foregone profit is the monitoring cost.

#### Bonding Costs

These are the costs incurred by the agents to assure the principal that they will act in the best interest of the principal.

#### Residual Costs

Residual costs is the remaining costs after taking into consideration of the above costs (i.e., monitoring costs, bonding costs).

## 1.8 THE CHANGING FINANCIAL LANDSCAPE

The past two decades have been witnessing radical changes in the financial system world over. The significant changes which has been taking place over the years are:

- a) Low interest rate regime
- b) Exchange control and convertibility
- Development of capital markets
- d) Less intermediation
- e) Introduction of hybrid financial instruments
- f) Increase in risk exposure
- g) Volatility in commodity prices
- Substantial lowering of custom duty (Removal of trade barriers).

These changes coupled with changing customer needs, technology driven innovations and regulatory changes are imposing substantial changes in the financial systems world over.

The impacts of these changes are as follows:

- Increased competitions have resulted in the rationalisation of pricing and costs.
   Companies having high cost structure are being forced to rationalise operations.
- National financial system is now more closely integrated with international financial system.

# 1.9 ORGANISATION OF FINANCIAL MANAGEMENT

Organisation of financial management means the division and the classification of various functions which are to be performed by the finance department.

In small organisations where partners or proprieters have main say in the running of the firm, no separate finance department is established. At the most they may appoint a person for book keeping and liasioning with banks and debtors.

In medium size organisations a separate department to organise all financial activities may be created at the top level under the direct supervision of the Board of Directors or a very senior executive. The important feature of this type of set up is that there is no further sub division based on various functional areas of finance.

In large size organisations the finance department is further sub divided into functional areas. In these organisations two main sub-divisions are that of the Financial Controller and the Treasurer. The Financial Controller is concerned with planning and controlling, preparation of annual reports capital and working capital hudgeting, cost and inventory management maintenance of books and records and pay-roll preparation. The treasurer is concerned with raising of funds both short term and long term. In addition to this the treasurer is responsible for cash and receivable management, auditing of accounts, protection and safe keeping of securities and the maintenance of relations with banks and institutions.

#### 1.10 TASKS AND RESPONSIBILITIES OF MODERN FINANCIAL MANAGER

The task and responsibilities of finance managers vary from organisation to organisation depending upon the nature and size of the business, but inspite of these variations the main tasks and responsibilities of finance manager can be classified as follows:

- a) Compliance with policy and procedures laid by the Board of Directors.
- b) Compliance with various rules and procedures as laid by law.
- c) Information generation for various stakeholders.
- d) Effective and efficient utilisation of funds

The main tasks and responsibilities of a financial manager are discussed below:

- Financial Planning and Forecasting: Financial manager is also concerned
  with planning and forecasting of production, sales and level of inventory.
  In addition to this, he has also to plan and forecast the requirement of funds and
  the sources from which the funds are to be raised.
- 2) Financial Management: Fund management is the primary responsibility of the finance manager. Fund management includes effective and efficient acquisition, allocation and utilisation of funds. The fund management includes the following:
  - Acquisition of funds: The finance manager has to ensure that adequate
    funds are available from the right sources at the right cost at the right time.
     The finance manager will have to decide the mode of raising fund, whether
    it is to be through the issue of securities or lending from the bank.
  - Allocation of funds: Once funds are acquired the funds have to be allocated to various projects and services as per the priority fixed by the Board of Directors.
  - Utilisation of funds: The objective of business finance is to earn profiles, which on a very large extent depend upon how effectively and efficiently allocated funds are utilised. Proper utilisation of funds in based in sound investment decisions, proper control and asset management policies and efficient management of working capital.
- Disposal of Profits: Finance manager has to decide the quantum of dividend which the company wants to declare. The amount of dividend will depend upon mainly the future requirement of funds for expansion and the prevailing tax policy.
- 4) Maximisation of Shareholder's Wealth: The objective of any business is to maximise and create wealth for the investors, which is measured by the price of the share of the company. The price of the share of any company is a function of its present and expected future earnings. The finance managers should pursue policies which maximises earnings.
- 5) Interpretation and Reporting: Interpretation of financial data requires skills. The finance manager should analyse financial data and find out the reasons for variance from standards and report the same to the management. He should also assess the likely financial impact of these variances.
- 6) Legal Obligations: All the companies are governed by specific laws of the land. These laws relate to payment of taxes, salaries, pension, corporate governance, preparation of accounts etc. The finance manager should ensure that a true and correct picture of the state of affairs should be reflected in the statement of accounts. He should also ensure that the tax returns and various other information should be submitted on time.

#### 1.12 SELF-ASSESSMENT QUESTIONS/EXERCISES

maximisation to that of wealth maximisation. The agency problem is concerned with

how managers behave when, delegated with decision making powers.

- "Finance is the life blood of industry." Elucidate this statement with suitable illustrations.
- 2) What is the finance function? Explain in orief the different approaches (or concepts) to Finance Function.
- 3) What is Financial Management? How does a modern financial management differ from traditional financial management?
- 4) What is meant by 'Financial Management'? What are the salient features of Financial Management?
- 5) Define Financial Management and discuss its main functions.
- 6) Explain the scope of financial management. What role should the financial manager play in modern enterprise?
- 7. What do you understand by 'Financial Management'? Discuss its significance in business management.
- "The importance of financial management has increased in modern times".
   Elucidate.
- "Sound Financial Management is a key to the progress for corporation." Explain.
- 10) "Without adequate finance no business can survive and without efficient financial management, no business can prosper and grow." Comment on this statement bringing out the role of financial management.
- (1) Discuss the objectives and goals of Financial Management.

#### 1.13 SOLUTIONS/ANSWERS

Check Your Progress 5

1) The three broad phases of evolution of financial management are as follows:

- a) The traditional phase
- b) The transitional phase
- c) The modern phase
- 2) The significance of financial management are:
  - a) Determination of business success
  - b) Optimum utilisation of resources
  - c) Focal point of decision making
  - d) Measurement of performance
  - e) Basis of planning coordination and control
  - f) Advisory role
  - g) Information generator for various stakeholders
- 3) The broad principles of corporate finance are:
  - a) Investment Decision
  - b) Financing Decision
  - c) Dividend Decision
  - d) Liquidity Decision

#### Check Your Progress 2

- The following are the significant changes taking place in the financial system;
  - a) Low interest rate regime
  - b) Exchange control and convertibility
  - c) Development of capital markets
  - d) Less intermediation
  - e) Introduction of hybrid financial instruments
  - f) Increase in risk exposure
  - g) Voiatility in commodity prices
  - h) Substantial lowering of custom duty
- 2) The main tasks and responsibilities of a financial manager are
  - a) Financial planning and forecasting
  - b) Financial management
  - c) Disposal of profits
  - d) Maximisation of shareholder's wealth
  - e) Interpretation and reporting
  - f) Legal obligations

#### 2.0 INTRODUCTION

The notion that money has time value is one of the most basic concepts of investment analysis. For any productive asset it's value will depend upon the future cash flows associated with that particular asset. In order to assess the adequacy of cash flows one of the important parameters is to assess the time value of the cash flows viz., Rs.100 received after one year would not be the same as Rs.100 received after two years. There are several reasons to account for this difference based on the timing of the cash flows, some of which are as follows:

- · there is a general preference for current consumption to future consumption,
- capital (savings) can be employed to generate positive returns,
- · due to inflation purchasing power of money decreases over time,
- future cash flows are uncertain.

Translating the current value of money into its equivalent future value is referred to as compounding. Translating a future cash flow or value into its equivalent value in a prior period is referred to as discounting. This Unit deals with basic mathematical techniques used in compounding and discounting.

#### 2.1 OBJECTIVES

After going through this unit, you should be able to:

- understand the time value of money;
- · understand what gives money its time value;
- understand the methods of calculating present and future value, and
- understand the use of present value technique in financial decisions.

#### 2.2 DETERMINING THE FUTURE VALUE

Let us suppose that you deposit Rs.1000 with a bank which pays 10 per cent interest compounded annually for a period of 3 years. The deposit will grow as follows:

| First Year  |                                      | Rs.  |
|-------------|--------------------------------------|------|
|             | Principal at the beginning, Interest | 1000 |
|             | for the year (1000x.10) Total        | 100  |
|             | amount                               | 1100 |
| Second Year | Principal at the beginning. Interest | 1100 |
|             | for the year (1100x.10). Total       | 110  |
|             | Amount                               | 1210 |
| Third Year  | Principal at the beginning. Interest | 1210 |
|             | for the year (1210x.10)              | 121  |
|             | Total Amount                         | 1321 |
|             |                                      |      |

To get the future value from present value for a one year period

$$FV = PV + (PV \times k)$$

where PV = Present Value

k = Interest rate

FV = PV(1+k)

Similarly for a two year period

| FV = PV          | + (PV×k)                              | + (PV×k)                                | + $(PV \times k \times k)$                                  |
|------------------|---------------------------------------|-----------------------------------------|-------------------------------------------------------------|
| Principal amount | First period interest<br>on principal | Second period interest on the principal | Second periods<br>interest on the first<br>periods interest |

$$FV = PV+PVk+PVk+PVk^{2}$$

$$= PV+2PVk+PVk^{2}$$

$$= PV (1+2k+K^{2}) = PV (1+k)^{2}$$

Thus, the future value of amount after n periods is

(2.1)

 $FV = PV (1+k)^n$ 

where FV = Future value n years hence

PV = Cash today (present value)

k = Interest rate par year in percentage

n = number of years for which compounding is done

Equation (2.1) is the basic equation for compounding analysis. The factor  $(1+k)^n$  is referred to as the compounding factor or the future value interest factor (FVIFk,n). Published tables are available showing the value of  $(1+k)^n$  for various combinations of k and n. One such table is given in appendix A of this unit.

Example 2.1 Find out the future value of Rs.1000 compounded annually for 10 years at an interest rate of 10%.

Solution: The future value 10 years hence would be

The appreciation in present value of an amount can also be expressed in terms of return. A return is the income on investment over each period divided by the amount

Time Value of Money

of investment at the beginning of the period. From the above example the arithmetic average return would be (2593.7 -1000)/1000=159.37% over the ten year period or 15.937% per year. The main drawback of using arithmetic average is that it ignores the process of compounding. To overcome this, the correct method is to use geometric average return to calculate overage annual return.

Rearranging the equation 2.1 we get

$$k = n\sqrt{\frac{FV}{PV}} - 1 \tag{2.2}$$

using the values from example 2.1

$$= \sqrt[3]{\frac{2593.7}{1,000}} - 1$$

$$= \left(\frac{2593.7}{1000}\right)^{1/10} - 1$$

$$= 1.10 - 1$$

$$= 1.10 = 10\%$$

#### 2.2.1 Shorter Compounding Period

So far in our discussion we have assumed that the compounding is done annually, now let us consider the case where-compounding is done more frequently. In this case the equation (2.1) is modified to factor in the change of frequency of compounding.

$$FV_n = PV \left(1 + \frac{k}{m}\right)^{m \times n} \tag{2.3}$$

where

FV<sub>n</sub> = Future value after n years

PV = Present Value

K = 2 moninal annual rate of interest

m = Frequency of compounding done during a year

= number of years for which compounding is done.

if the interest is payable semiannually frequency of compounding is 2, if it is payable monthly frequency is 12, if it is payable weekly frequency is 52 and so on.

**Example 2.2** Calculate the future value of Rs.5000 at the end of 6 years, if nominal interest rate is 12 per cent and the interest is payable quarterly (frequency = 4)

Solution:

$$FV_n = PV (1 + \frac{k}{m})^{m \times n}$$

$$FV_6 = 5000(1 + \frac{12}{4})^{6 \times 4}$$

$$= 5000(1 + \frac{13}{4})^{24}$$

$$= 5000 \times 2.0328$$

$$= 10.164$$

The future value of Rs.5000 after 6 years on the basis of quarterly compounding would be Rs.10 164 whereas in case of semi-annual and annual compounding the future value would be-

$$FV_8 = 5000(1 + \frac{.12}{2})^{6x^2}$$

$$= 5000(1 + 06)^{12}$$

$$= 5000 \times 2.0122$$

$$= 10.061$$

$$FV_6 = 5000 (1 + .12)^6$$

$$= 5000 (1.9738)$$

$$= 9868$$

This difference in future value is due to the fact that interest on interest has been calculated.

#### 2.2.2 Effective vs. Nominal Rates

In the above example we have seen how the future value changes with the change in frequency of compounding. In order to understand the relationship between effective and nominal rate let us calculate the future value of Rs.1000 at the interest rate of 12 per cent when the compounding is done annually, semiannually, quarterly and monthly.

FV = 
$$1000 (1+.12)^{1}$$
  
=  $1120$   
FV =  $1000 (1+\frac{.12}{2})^{2}$   
=  $1000 (1.06)^{2}$   
=  $1000 (1.1236)$   
=  $1123.6$   
FV =  $1000 (1+\frac{.12}{4})^{4}$   
 $1000 = (1.03)^{4}$   
 $1000 = (1.1255)$   
=  $1125.5$   
FV =  $1000 (1+\frac{.12}{12})^{12}$   
=  $1000 (1.01)^{12}$   
=  $1000 (1.1268)$   
=  $1126.8$ 

From the above calculations we can see that Rs.1000 grows to Rs.1120, Rs.1123.6, Rs.1125.5 and Rs.1126.8 although the rate of interest and time period are the same. In the above case 12.36, 12.55 and 12.68 are known as effective rate of interest. The relationship between the effective and nominal rate of interest is given by

$$r = (1 + \frac{k}{m})^m - 1$$
 (2.4)

where, r = effective rate of interest

k = nominal rate of interest

m = frequency of compounding per year

a) Effective interest rate for monthly compounding

$$r = (1 + \frac{.12}{12})^{12} - 1$$

$$= (1.01)^{12} - 1$$

$$= 1.1268 - 1$$

$$= .1268 = 12.68$$

b) Effective interest rate for quarterly compounding

$$r = (1 + \frac{12}{4})^4 - 1$$

$$r = (1.03)^4 - 1$$

$$r = 1.1255 - 1 = .1255$$

$$= 12.55\%$$

c) Similarly the effective interest rate for semi-annual compounding is

$$r = (1 + \frac{12}{2})^2 - 1$$

$$r = (1.06)^2 - 1$$

$$r = 1.1236 - 1 = .1236 = 12.36$$

#### **Doubling Period**

One of the first and the most common questions regarding an investment alternative is the time period required to double the investment. One obvious way is to refer to the table of compound factor from which this period can be calculated. For example the doubling period at 3%, 4%, 5%, 6%, 7%, 8%, 9%, 10%, 12% would be approximately 23 years, 18 years, 14 years, 12 years, 10 years, 9 years, 8 years, 7 years, and 6 years respectively.

If one is not inclined to use future value interest factor tables there is an alternative, known as rule of 72. According to this rule of thumb the doubling period is obtained by dividing 72 by the interest rate. For example, at the interest rate of 8% the approximate time for doubling an amount would be 72/8 = 9 years.

A much more accurate rule of thumb is rule of 69. As per this rule the doubling period is equal to

$$.35 + \frac{69}{\text{Interest rate}}$$

Using this rule the doubling period for an amount fetching 10 percent and 15 percent interest would be as follows.

$$.35 - \frac{69}{10} = .35 + 6.9 = 7.25 \text{ years}$$
$$.35 + \frac{69}{15} = .35 + 4.6 = 4.95 \text{ years}$$

#### 2.2.3 Continuous Compounding

The extreme frequency of compounding is continuous compounding where the interest is compounded instantaneously. The factor for continuous compounding for one year is eAPR where e is 2.71828 the base of the natural logarithm. The future value of an amount that is compounded for n years is

$$FV = PV \times e^{kn}$$

Where k is annual percentage rate and  $e^{\xi_{k}}$  is the compound factor.

Example 2.3: Find the future value of Rs.1000 compounded continuously for 5 year at the interest rate of 12% per year and contrast it with annual compounding.

Solution: 
$$FV_{\overline{5}} = PVe^{N(APR)}$$
  
=  $1000 \times 2.71828$   
=  $1000 \times 2.71828^{60}$   
=  $1000 \times 1.82212$   
=  $182212$   
 $FV_{\overline{5}} = PV(1+k)^n$   
=  $1000(1+12)^5$   
=  $1000(1.7623)$   
=  $1762.3$ 

From this example you can very well see the effects of extreme frequency of compounding.

So far in our discussion we have assumed that the interest rate is going to remain the same over the life of the investment, but now a days we are witnessing an increased volatility in interest rates as a result of which the financial instruments are designed in a way that interest rates are benchmarked to a particular variable and with the change in that variable the interest rates also change accordingly.

In such cases the Future Value is calculated through this equation.

$$FV_n = PV(1+k_1)(1+k_2)(1+k_3)+...$$
 (1+k<sub>n</sub>) (2.5)

Where  $k_n$  is the interest rate for period n.

Example 2.4: Consider a Rs.50, 000 investment in a one year fixed deposit and rolled over annually for the next two years. The interest rate for the first year is 5% annually and the expected interest rate for the next two years are 6% and 6.5% respectively calculate the future value of the investment after 3 years and the average annual interest rate.

Solution:

FV = PV 
$$(1+k_1)(1+k_2)(1+k_3)$$
  
= 50.000(1+.05)(1+.06)(1+.065)  
= 59.267.25

Average annual interest rate

$$\frac{.05 + .06 + .065}{3}$$
  
= .58333 (wrong)

By now we know the values of FV, PV, and n. The average annual interest rate would be

 $k = \sqrt[n]{\frac{FV}{PV}}$   $k = \sqrt[3]{\frac{59267.25}{50,000}} = \sqrt[3]{1.185345} = 5.8315\%$ 

This is also equivalent to

$$k = \sqrt[3]{(1+.05)(1+.06)(1+.065)} - I$$
  
= 5.8315

#### 2.3 ANNUITY

An annuity is defined as stream of uniform period cash flows. The payment of life insurance premium by the policyholder to the insurance company is an example of an annuity. Similarly, deposits in a recurring bank account is also an annuity.

Depending on the timing of the cash flows annuities are classified as:

- a) Regular Annuity or Deferred Annuity
- b) Annuity Due.

The regular annuity or the deferred annuity are those annuities in which the cash flow occur at the end of each period. In case of an annuity due the eash flow occurs at the beginning of the period.

Example 2.5: Suppose Mr. Ram deposits Rs. 10,000 annually in a bank for 5 years, at 10 per cent compound interest rate, Calculate the value of this series of deposits at the end of five years assuming that (i) each deposit occurs at the end of the year (ii) each deposit occurs at the beginning of the year.

Time V.

0.5

Solution: The future value of regular annuity will be

Rs.  $1000 (1.10)^4 + 1000 (1.10)^3 + 1000 (1.10)^2 + 1000 (1.10) + 1000$ = 6105.

The future value of an annuity due will be

Rs.  $1000 (1.10)^5 + 1000 (1.10)^4 + 1000 (1.10)^3 + 1000 (1.10)^2 + 1000 (1.10)$ = Rs 1000 (1.611) + 1000 (1.4641) + 1000 (1.331) + 1000 (1.21) + 1000 (1.10)= Rs. 6716.

In the above example you have seen the difference in future value of a regular annuity and annuity due. This difference in value is due to the timing of cash flow. In case of regular annuity the last cash flow does not earn any interest, whereas in the case of annuity due, the cash flows earns an interest for one period.

#### Formula

In general terms the future value of an annuity (regular annuity) is given by the following formula:

FVA 
$$_{n} = A(i + k)^{n-1} + A(i + k)^{n-2} + ... + A$$

$$= A \sum_{t=1}^{n} \frac{(i + k)^{n-t}}{k}$$

$$= A \left[ \frac{(i + k)^{n} - i}{k} \right]$$
(2.6)

Future value of an annuity due

$$FVA_{n(due)} A(1+k)^{n} + A(1+k)^{n-1} + .... + A(1+k)$$

$$FVA_{n(due)} = A \sum_{t=1}^{n} (1+k)^{n-t+1}$$

$$= A \left[ \frac{(1+k)^{n} - 1}{k} \right] (1+k)$$
(2.7)

Where FVA<sub>n</sub> = Future value of an annuity which has a duration of n periods

A = Constant periodic cash flow

k = Interest rate per period

n = duration of the annuity

The term  $\left[\frac{(1+k)^n-1}{k}\right]$  is referred to as the future value interest factor for an annuity

(FVIFA<sub>k, $\sigma$ </sub>). The value of this factor for several combinations of k and n are given in the appendix at the end of this unit.

#### Present Value of an Uneven Series

In real life cash flows occurring over a period of time are often uneven. For example, the dividends declared by the companies will vary from year to year, similarly payment of interest on loans will vary if the interest is charged on a floating rate basis. The present value of a cash flow stream is calculated with the help of the following formula:

$$PV_{n} = \frac{A_{1}}{(1+K)} + \frac{A_{2}}{(1+k)^{2}} + \dots + \frac{A_{n}}{(1+k)^{n}} = \sum_{t=1}^{n} \frac{A_{1}}{(1+k)^{t}}$$
 (2.8)

Where

PV<sub>n</sub> = present value of a cash flow stream

A, = cash flow occurring at the end of the year

k = discount rate

n = duration of the cash flow stream

#### Shorter Discounting Periods

Sometimes cash flows may have to be discounted more frequently than once a year-semi-annually, quarterly, monthly or daily. The result of this is two fold (i) the number of periods increases (ii) the discount rate applicable per period decreases. The formula for calculating the present value in case of shorter discounting period is

$$PV = FV_{n} \left[ \frac{1}{1 + k/m} \right]^{n/m}$$
 (2.9)

Where m = number of times per year discounting is done.

Example 2.6: Calculate the present value of Rs. 10,000 to be received at the end of 4 years. The discount rate is 10 percent and discounting is done quarterly.

#### Solution:

#### Determining the Present Value

In the previous sections we have discussed the computation of the future value, now let us work the process in reverse. Let us suppose you have won a lottery ticket worth Rs. 1000 and this Rs. 1000 is payable after three years. You must be interested in knowing the present value of Rs. 1000. If the interest rate is 10 per cent, the present value can be calculated by discounting Rs. 1000 to the present point of time as follows.

Value three years hence = Rs. 
$$1000 \left( -\frac{1}{1.10} \right)$$
  
Value one years hence = Rs.  $1000 \left( \frac{1}{1.10} \right) \left( \frac{1}{1.10} \right)$   
Value now (Present Value) = Rs.  $1000 \left( \frac{1}{1.10} \right) \left( \frac{1}{1.10} \right) \left( \frac{1}{1.10} \right)$ 

#### Formula

Compounding translates a value at one point in time into a value at some future point in time. The opposite process translates future value into present value. Discounting translates a value back in time. From the basic vibration equation

$$FV = PV (1 + k)^n$$

Dividing both the sides by (1+k) we get

$$PV = FV \left[ \frac{1}{(1+k)} \right]^n \qquad (2.10)$$

The factor  $\left[\frac{1}{(l+k)}\right]^n$  is called the discounting factor or the present value interest factor  $[PVIF_{kn}]$ 

Example 2.7: Calculate the present value of Rs. 1000 receivable 6 years hence if the discount rate is 10 per cent.

Solution: The present value is calculated as follows:

$$PV_{kn} = FV_n \times PVIF_{k,n}$$
  
= 1,000 × (0.5645)  
= 564.5

Example 2.8: Suppose you are receiving an amount of Rs.5000 twice in a year for next five years once at the beginning of the year and the other amount of Rs. 5000 at the end of the year, which you deposit in the bank which pays an interest of 12 percent. Calculate the value of the deposit at the end of the fifth year.

Solution: In this problem we have to calculate the future value of two annuities of Rs.5000 having duration of five years. The first annuity is an annuity due and the second annuity is regular annuity, therefore the value of the deposit at the end of five year would be

$$FVA_{n} + FVA_{n(disc)}$$

$$= A \left[ \frac{(1+k)^{n} - 1}{k} \right] + A \left[ \frac{(1+k)^{n} - 1}{k} \right] (1+k)$$

$$= A (FVIFA_{12,5}) + A (FVIFA_{12,5}) (1+k)$$

$$= 5000 (6.353) + 5000 (6.353) (1.12)$$

$$= 31,765 + 35,577$$

$$= 67336$$

The value of deposit at the end of the fifth year is Rs. 67,342

#### Sinking Fund Factor

Suppose you are interested in knowing how much should be saved regularly over a period of time so that at the end of the period you have a specified amount. To answer this question let us manipulate the equation

$$FVA_n = A \left[ \frac{(1+k)^n - 1}{k} \right]$$

which shows the relationship between FVA, A, k, and

$$A = \left[\frac{k}{(1+k)^{n}-1}\right]^{FVA_{n}}$$
 (2.11)

Equation 2.11 helps in answering this question. The periodic deposit is simply A and is obtained by divising FVAn by FVIFA<sub>k,n</sub>. In eq 2.11  $\left[\frac{k}{(1+k)^n-1}\right]$  is the inverse of FVIFA<sub>k,n</sub> and is called the sinking fund factor.

Example 2.9: How much should you save annually so as to accumulate Ps. 20,00,000 by the end of 10 years, if the saving earns an interest of 12 per cent?

#### Solution:

$$A = FVA_n \left[ \frac{k}{(1+k)^n - 1} \right]$$

$$= Rs 20,000 \times \frac{1}{FV1FA_{12\%,10}}$$

$$= Rs 20,00000 \times \frac{1}{17.548}$$

$$= 1,11,400$$

#### Present value of an annuity

Let us suppose you expect to receive Rs.2000 annually for the next three years. This receipt of Rs.2000 is equally divided. One part viz., Rs.1000 is received at the beginning of the year and the remaining Rs.1000 is received at the end of the year. We are interested in knowing the present value when the discount rate is 10 per cent. The cash flows stated above are of two types which are similar to regular annuity and annuity due. The present value of this cash flow is found out as follows:

a) Present value of Rs.1000 received at the end of each year for three years (Regular annuity).

Rs. 
$$1000(\frac{1}{1.10}) + \text{Rs.} 1000(\frac{1}{1.10})^2 + \text{Rs.} 1000(\frac{1}{1.10})^3$$
  
 $1000 \times 09091 + 1000 \times 08264 + 1000 \times 0.7513$   
Rs.  $2479$ 

b) Present value of Rs.1000 received at the beginning of each year for three year (annuity due)

Rs.160. 
$$(.$1000(\frac{1}{1.10}) - Rs.1000(\frac{1}{1.10})^2$$
  
=1000 + 1600 × 0.9091 - 1000 × 08264  
= Rs.2735

The present value of this annuity is Rs. 2479±Rs 2735 = Rs 5214.

#### Formula

In general terms the present value of a regular annuity may be expressed as follows:

$$PVN_{n} = \frac{A}{(1+k)} + \frac{A}{(1+k)^{2} + \cdots + \frac{A}{(1+k)^{n}}}$$

$$= A \left[ \frac{1}{1+k} + \frac{1}{(1+k)^{2}} + \cdots + \frac{1}{(1+k)^{n}} \right]$$

$$= A \left[ \frac{(1+k)^{n} - 1}{k(1+k)^{n}} \right]$$

In case of annuity due

$$PV \Lambda_{n(doe)} = A \left[ \frac{(l+k)^n - 1}{k(l+k)^n} \right] (l+k)$$
 (2.12)

where PVA = Present value of an annuity which has a duration of n periods

A = Constant periodic flows

k = discount rate

#### Capital Recovery Factor

Equation 2.12 shows the relationship between PVA, A, K and n. Manipulating it a bit:

We get

$$A = PVA_{n} \left[ \frac{k(1+k)^{n}}{(1+k)^{n}-1} \right]$$
 (2.13)

 $\left[\frac{k(1+k)^n}{(1+k)^n-1}\right]$  in equation 2.13 is inverse of PVIFA<sub>k,n</sub> and is called the capital recovery factor.

Example 2.10: Suppose you receive a cash bonus of Rs.1,00,000 which you deposit in a bank which pays 10 percent annual interest. How much can you withdraw annually for a period of 10 years.

From eq.2.13

$$A = PVA_b \times \frac{1}{PVIFA_{10\%}10}$$

$$A = \frac{1,00,000}{6.145}$$

$$A = 16,273$$

Present value of perpetuity:

A perpetuity is an annuity of an infinite duration

$$PVA_{\infty} = A \left[ \frac{1}{(1+k)} + \frac{1}{(1+k)^{2}} + ... + \frac{1}{(1+k)} \infty \right]$$

$$PVA_{\infty} = A \times PVIFA_{k,\infty}$$

where PVA = Present value of a perpetuity

A = Constant annual payment

PVIFA<sub>k,0</sub> = Present value interest factor for perpetuity

The value of PVIFA, w is

$$\sum_{k=1}^{\infty} \frac{1}{(1+k)^{t}} = \frac{1}{k}$$

The present value interest factor of an annuity of infinite duration (perpetuity) is simply 1 divided by interest rate (expressed in decimal form. The present value of an annuity is equal to the constant annual payment divided by the interest rate, for example, the present value of perpetuity of Rs.20, 000 if the interest rate is 10%, is Rs. 2,00,000.

|      |                                                                                                                                                                                                                                                                      |
|      |                                                                                                                                                                                                                                                                      |
| 3)   | A bank has offered to pay you an annuity of Rs. 1,800 for 10 years if you invest Rs. 12,000 today. What rate of return would you earn?                                                                                                                               |
|      |                                                                                                                                                                                                                                                                      |
|      |                                                                                                                                                                                                                                                                      |
|      |                                                                                                                                                                                                                                                                      |

#### Derivation of Formulas

# i) Future Value of an Annuity

Future value of an annuity is

$$FVA_n = A(1+k)^{n-1} + A(1+k)^{n-2} + \dots A(1+k) + A$$
 (a1)

Multiplying both sides of the equation alby (1+k) gives.

$$(FVA_n)(1+k) = A(1+k)^n + A(1+k)^{n-1} + ... A(1+k)^2 + A(1+k)$$
 (a2)

Subtracting eq. (a1) from eq. (a2) yields

$$FVA_n k = A \left[ \frac{(1+k)^n - 1}{k} \right]$$
 (a3)

Dividing both sides of eq. (23) by k yields

$$FVA_n = A \left[ \frac{(1+k)^n - 1}{k} \right]$$

### ii) Present Value of an Annuity

The present value of an annuity is

$$PVA_{n}k = A(1+k)^{-1} + A(1+k)^{-2} + .... + A(1+k)^{-n}$$
 (a4)

Multiplying both sides of eq(a4) by (1+k) gives:

$$PVA_{n}(1+k) = A + A(1+k)^{-1} + \dots + A(1+k)^{-n+1}$$
 (a5)

Subtracting eq (a4) from eq (a5) yields:

$$PVa_{n} k = A \left[ 1 - (1 + k)^{-n} \right] = A \left[ \frac{(1 + k)^{n} - 1}{k(1 + k)^{n}} \right]$$
 (36)

Dividing both the sides of eq (a6) by k results in:

$$PVA_{n} = A \left[ \frac{(1+k)^{n} - 1}{k(1+k)^{n}} \right]$$

# iii) Present Value of a Perpetuity

$$PVA_{\infty} = A(1+k)^{-1} + A(1+k)^{-2} + \dots + A(1+k)^{\infty+1} + A(1+k)^{\infty}$$
 (a7)

Multiplying both the sides of eq (a7) by (1+k) gives:

$$PVA_{\infty} = (1+k) = A(1+k) + A(1+k)^{-1} + \dots A(1+k)^{-\infty+2} + A(1+k)^{-\infty+1}$$
 (a8)

subtracting eq (a7) from eq (a8) gives:

$$PVA_{\infty}k = A[1-(1+k)^{\infty}]$$

As  $(1+k)^{-n} \rightarrow eq.(a8)$  becomes:

$$PVA_nk = A$$

$$\Rightarrow PVA_{\omega} = \frac{A}{k}$$
 (a9)

#### iv) Continuous Compounding

In Section 2.2.2 we had established a relationship between the effective and nominal rate of interest where compounding occur n times a year which is as follows:

$$r = \left(1 + \frac{k}{m}\right)^m - 1 \tag{a10}$$

Rearranging equation a10, it can be expressed as

$$r = [(1 + \frac{k}{m/k})^{m/k}]^k - 1$$
 (a11)

Let us substitute m/k by x om eq (a11)

$$r = [(1 + \frac{1}{x})^k] - 1$$
 (a12)

In continuous compounding  $m \to \infty$  which implies  $x \to \infty$  in eq. (a12)

$$\lim_{x \to \infty} \left(1 + \frac{1}{x}\right)^{k} = e = 2.71828...$$

From equation (a12) results in

$$R = e^{k}-1$$

$$\Rightarrow (r+1)=e^k$$

Thus the future value of an amount when continuous compounding is done is as follows:

$$FV_n = PV \times e^{km} \tag{a13}$$

#### v) Continuous Discounting

From eq (a12)

$$PV = FV_n \times e^{-km}$$

# 2.4 SUMMARY

Individuals generally prefer possession of cash right now or in the present moment rather than the same amount at some time in the future. This time preference is basically due to the following reasons: (a) uncertainty of cash flows (b) preference for current consumption (c) availability of investment opportunities. In case an investor opts to receive cash in future s/he would demand a risk premium over and above the risk free rate as compensation for time to account for the uncertaininty of cash flows. Compounding and discounting are techniques to facilitate the comparison of cash flows occurring at different time periods. In compounding future value of cash flows at a given interest rate at the end of a given period of time are cash flows at a given interest rate at the beginning of a given period of time is found out. An annuity is a series of periodic cash flows of equal amount. Perpetuity is an annuity of infinite duration. Table 2.1 depicts the various formulas used for discounting and compounding.

Table 2.1: Summary of Discounting and Compounding Formulas

| Purpose         | Given PV Present                | Calculate FV <sub>n</sub> Future      | Formula                                                                        |

# 2.5 SELF-ASSESSMENT QUESTIONS

- If you are offered two investments, one that pays 5% simple interest per year and one that pays 5% compound interest per year, which would you choose? Why?
- Suppose you make a deposit today in a bank account that pays compounded interest annually. After one, year, the balance in the account has grown.
  - a) What has caused it to grow?
  - b) After two year's the balance in the account has grown even more what has caused the balance to increase during the second year?
- 3) The Florida Lottery pays out winnings, after taxes, on the basis of 20 equal annual installments, providing, the first installment at that time when the winning ticket is turned in.
  - a) What type of cash flow pattern is the distribution of lottery winnings?
  - b) How would you value such winnings?
- 4) Rent is typically paid at the first of each month. What pattern of cash flow, an ordinary annuity or an annuity due, does a rental agreement follow?
- 5) a) Under what conditions does the effective annual rate of interest (EAR) differ from the annual percentage rate (APR)?
  - b) As the frequency of compounding increases within the annual period what happens to the relation between the EAR and the APR?
- Using the appropriate table, calculate the compound factor for each of the following combinations of interest rate per period and number of compounding periods:

| Number of Periods | Interest rate per Period | Compound Factor |
|-------------------|--------------------------|-----------------|
| 2                 | 2%                       | -               |
| 4                 | 3%                       | •               |
| 3                 | 4%                       | -               |
| 6                 | 8%                       | -               |
| 8                 | 6%                       | -               |

 Using the appropriate table, calculate the discount factor for each of the following combinations of interest rate per period and number of discounting periods.

| Number of Periods | Interest Rate per Period | Discount Factor |
|-------------------|--------------------------|-----------------|
| 2                 | 2%                       | -               |
| 4                 | 3%                       |                 |
| 3                 | 4%                       | -               |
| 6                 | €%                       | -               |
| 8                 | 6%                       | -               |

8) Using the appropriate table, calculate the future value annuity factor for each of the following combinations of interest rate per period and number of payments:

| Number of Periods | Interest Rate per Period | Discount Factor |
|-------------------|--------------------------|-----------------|
| 2                 | 2%                       |                 |
| 4                 | 3%                       | -               |
| 3                 | 4%                       |                 |
| 6                 | 8%                       | _               |
| 8                 | 6%                       |                 |

9) Using the appropriate table, calculate the present value annuity factor for each of the following combinations of interest rate per period and number of payments:

| Number of Periods |   | Interest Rate per Periods | Discount Factor |            |
|-------------------|---|---------------------------|-----------------|------------|
| . 2               |   | 2%                        | -               | <i>P</i> . |
| 4                 |   | 3%                        | -               | ı          |
| 3                 | • | 4%                        | -               |            |
| - 6               |   | · 8%                      | -               |            |
| 8                 |   | 6%                        | -               |            |

- 10) Using an 8% compounded interest rate per period calculate the future value of
  - a) Rs.100 investment
  - b) one period into the future
  - c) two periods into the future
  - d) three periods into the future
  - e) four periods into the future
  - f) five periods into the future
  - g) 40 periods into the future.
- 11) Suppose you deposit Rs.1,000 into a savings account that earns interest at the rate of 4% compounded annually, what would the balance in the account be:
  - a) after two years
  - b) after four years
  - c) after six years
  - d) after 20 years
- 12) You deposit Rs.10,000 in an account that pays 6% compounded interest per period, assuming no withdrawal:
  - a) What will be the balance in the account after two periods?
  - b) after the two periods, how much interest has been paid on the principal amount?
  - c) After the two periods, how much interest has been paid on interest?
- Using ah 8% compounded interest rate, calculate the present value of Rs. 100 to be received:
  - a) one period into the future
  - b) two periods into the future
  - c) three periods into the future
  - d) four periods into the future
  - e) five periods into the future
  - f) 40 periods into the future
- 14) Ted wants to borrow from Fred. Ted is confident that he will have Rs.1, 000 available to pay off Fred in two years. How much will Fred be willing to lend to Ted in return for Rs.1,000 two years from now if he uses a compounded interest rate per year of:
  - (a) 5% (b) 10% (c) 15%?
- 15) How much would you have to deposit into a savings account that earns 2% interest compounded quarterly, to have a balance of Rs. 2,000 at the end of four years if you make no withdrawals?
- What is the present value of Rs.5, 000 to be received five years from now, if the nominal annual interest rate (APR) is 12 % and interest is compounded:

  (a) Annually (b) Semiannually (c) Quarterly (d) Monthly

17) Calculate the future value at the end of the second period of this series of endof period cash flows, using an interest rate of 10% compounded per period:

| Үеаг   | End of Year Cash Flow |
|--------|-----------------------|
| Year l | Rs. 2,000             |
| Year 2 | Rs. 3,000             |
| Year 3 | Rs. 4,000             |
| Year 4 | Rs. 5,000             |

18) An investor is considering the purchase of an investment at the end of Year O that will yield the following cash flows:

| Year   | End of Year Cash Flow |  |
|--------|-----------------------|--|
| Year!  | Rs. 2,000             |  |
| Year 2 | Rs. 3,000             |  |
| Year 3 | Rs. 4,000             |  |
| Year 4 | Rs. 5,000             |  |

If the appropriate discount rate for this investment is 10%, what will this investor be willing to pay for this investment.

19) Calculate the present value (that is the value at the end of period 0) of the following series of end of period cash flows:

| Year   | End of Year Cash Flow |
|--------|-----------------------|
| 0      | Rs.1,000              |
| Year 2 | Rs. 200               |
| 2      | Rs. 400               |

20) Suppose the investment promises to provide the following cash flows:

| Year   | End of Year Cash Flow | <del></del> - |
|--------|-----------------------|---------------|
| Year 1 | Rs.0                  |               |
| Year 2 | Rs.1,000              |               |
| Year 3 | Rs.0                  |               |
| Year 4 | Rs.1,000              |               |

If interest is compounded annually at 5% what is the value of the investment at the end of: (a) Year 1 (b) Year 0

- 21) Calculate the future value at the end of the third period of an ordinary consisting of three cash flows of Rs.2,000 each. Use a 5% rate of interest per period.
- 22) What is the present value of Rs.10 to be received each period forever, if the interest rate is 6%?
- 23) If an investor is willing to pay Rs.40 today to receive Rs.2 every year forever, what is this investor's opportunity cost used to value this investment?
- 24) Calculate the present value of an annuity due consisting of three cash flows of Rs.1,000 each, one year apart. Use a 5% compounded interest rate per year
- 25) Calculate the future value at the end of the third period of an annuity due, consisting of three cash flows of Rs. 1,000 each, each one year agart. Use a 6% compounded interest rate per year.

Time Value of Money

- Suppose you have won the Florida Lotto worth Rs.18 million. Further suppose that the State of Florida will pay you the winnings in 20 annual installments, starting immediately, of Rs.9,00,000 each. If your opportunity cost is 10% what is the value today of these 20 installments?
- 27) Calculate the required deposit to be made today so that a series of ten withdrawals of Rs. 1,000 each can be made beginning five years from today. Assume an interest rate of 5% per period of end of period balances.
- 28) How much would you need to deposit today so that you can withdraw Rs. 4,000 per year for ten years, starting three years from today?
- 29) Suppose you wish to invest Rs. 2,600 today so that you have Rs. 4,000 six years from now. What must the compounded annual interest rate be in order to achieve your goal?

# 2.6 SOLUTIONS/ANSWERS

#### Check Your Progress 1

- 1) i) Annual Compounding Rs. 1,254.
  - ii) Half year Compounding Rs. 1,262.
  - iii) Quarterly Compounding Rs. 1,267.
  - iv) Monthly Compounding Rs. 1, 270.
- 2) Rs. 1,806
- 3) 7%

#### **Check Your Progress 2**

- 1) a) Rs. 571.20 b) 470.50 c) 288.60
- Equal yearly instalment = Rs. 3200.61
   Equal quarterly instalment = Rs. 793.28
- 3) 8.15%

# 3.0 INTRODUCTION

The value of any particular asset is not easy to determine as the value of any asset is determined by the present value of the future cash flows associated with the assets which itself are uncertain in nature. The managers are continually faced with decisions regarding the various alternative investments scenarios. In this unit we look at the various types of capital investment decisions which the finance manager takes we are also going to look at the ways and means to estimate the costs and benefits associated with these decisions.

# 3.1 OBJECTIVES

After going through this unit, you should be able to:

- understand the nature and importance of capital investment decisions, and
- explain the various evaluation criteria for investment decisions.

# 3.2 THE INVESTMENT PROBLEM

Firms continually invest funds in assets and these assets produce cash flows and income, which can be either reinvested or paid to the shareholders. These assets represent the firms capital and is the firm's total assets and includes tangible and intangible assets. Capital investment is the firm's investment in its assets. The firm's capital investment decision may be comprised of a number of distinct decisions each referred to as a project. A capital project is a set of assets that are contingent on the other and are considered together. The investment decisions of the firms are decisions concerning a firm's capital investment.

lavestment decisions of capital projects are primarily based on two factors:

- (i) the changes in the firm's future cash flows by investing in a particular capital project, and
- (ii) the uncertainty associated with future cash flows.

The value of a firm is the present value of all its future cash flows and the source of these future cash flows are:

 $\mathbb{P}^{i}$ 

- Assets that are already in place
- Future investment opportunities.

Future cash flows are re-discounted at a rate which takes into consideration the risk and uncertaininty of these cash flows. Cash flow risk comes from two basic sources:

- Sales risk, which is the degree of uncertainty related to the number of units that will be sold and the price realised.
- Operating risk, which is the degree of uncertainty concerning cash flows that
  arises from the particular mix of fixed and variable operating costs of sales.
  Risk is associated with general economic conditions prevailing in the markets
  in which goods and services are sold, whereas the operating risk is determined
  by the product itself and is related to the sensitivity of operating cash flows to
  changes in sales. The combination of these two risks is business risks.

The discount rate (the rate of return required to compensate the suppliers of capital) is a function of business risk associated with the project. From the investors perspective the discount rate is the required rate of return (RRR) and from the firm's perspective, the discount rate is the cost of capital.

# 3.3 CAPITAL INVESTMENT AND FIRM'S VALUE

As, we have already discussed the firm's value is the present value of all the future cash flows. In order to assess whether the capital investments are adding value to the firm we have to look at the future cash flows associated with capital investment and the discount rate which would equate these cash flows to their present values.

Capital Budgeting: Capital budgeting is the process of identifying and selecting investments in the long lived assets or the assets which are expected to produce benefits over more than a year. Business is all about exploring avenues for growth and innovation, which requires continuous evaluation of possible investment opportunities. Capital budgeting to a large extent depends upon the corporate strategy.

# 3.3.1 Stages in Capital Budgeting Process

There are four stages in the capital budgeting process:

Stage 1: Investment Screening and Selection – Projects consistent with the corporate strategy are identified by the various functional units (production, marketing, research and development) of the firm. Once the projects are identified, projects are evaluated and screened by an investment committee comprising of senior managers. The main focus of this process is to estimate how the investment proposal will affect the future cash flows of the firm and hence the value of the firm.

Stage 2: Capital Budgeting Proposal — Once the investment proposal survives the scrutiny of the investment committee, a capital budget is proposed for the project. The capital budget lists the amount of investment required for each investment proposal. This proposal may start with estimates of expected revenue and costs. At a later stage inputs from marketing, purchasing on incering, production and accounting and finance functions are put together.

Stage 3: Budgeting Approval and Authorisation Projects included in the capital budgets are authorised, which allows further fact gathering research and analysis as a result of which the capital budget proposal is refined and put up for approval. The approval allows the expenditure on the project. In some firms the projects are

authorised and approved concurrently, where as in others a project is first authorised so that the estimates can be refined. It is then approved. Large expenditures require formal authorisation and approvals whereas capital expenditures within a certain limit can be approved by the managers themselves.

Stage 4: Project Tracking – Once the project is approved the next step is to execute it. The concerned managers periodically report the progress of the project as well as any variances from the plan. The managers also report about time and cost overruns. This process of reporting is known as project tracking

#### Classifying Investment Project

Investment projects are classified according to their economic life. The economic life or useful life of an asset is determined by its:

- Physical decoration
- Obsolescence
- The degree of competition in the market for a product.

The economic life of an asset is an estimate of the length of time that the asset would provide benefits to the firm. After its useful life, the revenues generated by the assets decline rapidly and expenses on the assets increase in a disproportionate manner.

Generally an investment requires an immediate commitment of funds (cash outflows) and the benefits are received over a period of time in the form of cash inflows. If cash inflows are limited to current period only these types of investments are known as short term investments. If these benefits are spread over many years, these types of investments are referred to as long term investments and expenditure on these investments is known as capital expenditure.

# 3.3.2 Importance of Capital Investment Decisions

Investment decisions are vital and crucial for any company and merit special attention because of the following reasons:

- They influence the firm's growth in the long run
- They affect the risk of the firm
- They involve commitment of large amount of funds
- They are irreversible or reversible at substantial loss
- They are among the most difficult decisions to make.

Growth: Investment decisions affect the growth rate of the firm. A firm's decisions to invest in long-term assets will have a bearing on the rate and direction of its future growth. The assumptions on which capital investment decisions are based have to be estimated with a fair degree of precision; otherwise this may lead to the creation of excessive capacity and simultaneous increase in interest and other costs. On the other hand inadequate investments would lead to a loss of market share.

Risk: The risk complexion of the firm may also change with long-term commitment of funds for capital assets. The capital assets are financed by a mix of internal accruals, long-term borrowings and issue of fresh equity. The firms using borrowings to finance capital projects become more risky as the future cash flows associated with the capital projects are uncertain.

Investment Appraisal Methods

Funding: Investment decisions generally require large amount of funds, which make it imperative for the firms to plan their investment programame very carefully and make an advance arrangement for procuring finances internally or externally.

Irreversibility: Most of the capital investments are irreversible or reversible at very significant costs. Once the funds are committed for a capital project it becomes imperative for the firm to complete the project, abandoning it mid way would cause heavy losses to the firm as it is difficult to find a market for such custom made plant and machinery.

Complexity: Investment decisions are among the firm's most difficult decisions. The reasons for the complexity of these decisions are that they involve estimating the future cash flows of an investment, decisions, which in turn are depended on economic, political, social and technological variables.

### 3.3.3 Types of Investment Decisions

There are many ways of classifying investments, which are briefly described as follows:

#### (a) Expansion and Diversification

Increasing economic activities may lead the company in to adding new capacity to its existing product lines to expand existing operations. For example, most of the steel companies have increased their plant capacity to meet increased steel demand. Some of these companies have installed additional capacity to produce specialised products like cold rolled sheets, flat products etc. These types of expansion are known as related diversification. On the other hand the companies may go for unrelated diversification, which requires investment in new products and a new kind of production activity within the company. For example, Reliance Industries Ltd. (RIL) primarily a textile and petrochemical Company diversified into tele-communication. These types of diversification are known as unrelated diversification. In either case the objective of the investment is to generate additional revenue. Investment in existing or new products is also known as revenue-expansion investments.

#### (b) Replacement and Modernisation

Rapid technological advancements have necessitated the replacement and modernisation of existing plants and machinery. The main objective of replacement is to improve operating efficiency and reduce costs. Cost savings may lead to increased profits but the revenue may remain unchanged. In cases where replacement decisions lead to substantial technological and operational improvements, it may also lead to increase in revenues. Replacement investments are also referred to as cost reduction investment.

#### (c) Forward and Backward Integration

All companies require raw materials for production and the final product manufactured may be used as raw material for another company. When the companies integrate the source of raw material/inputs it is known as backward integration, for example, a cloth weaving company investing in yarn spinning, a petroleum product refining company investing in hydrocarbon exploration. In the same way when the intermediate product manufactured is further processed to make another product having a higher value it is known as forward integration, for example, a petroleum product refining company investing in manufacturing petrochemicals. The basic objective of forward and backward integration is to be present at every stage of the value chain.

Another way to classify investments is as follows:

#### (a) Mutually Exclusive Investments

These types of investment decisions involve choosing among different alternatives. Choosing one alternative will exclude all other alternatives. For example, for capital power generation a company may either choose between a gas based or coal based power generator. Choosing any one of the alternatives will automatically exclude all the other available alternatives.

#### (b) Independent Investments

In these type of investment decisions, the choosing of one of the capital investment will not affect the decision making process for other investments. For example, in a cement manufacturing plant, the installation of a rotatory klin and a captive power plant are independent decisions and decision regarding one alternative will not affect the other decision.

#### (b) Contingent Investments

In these types of investments, the decision regarding one project is dependent on the decision regarding another project. For example, a steel company contemplating investments in a blast furnace. The decision regarding this project would be contingent upon the investment in iron ore mines.

# 3.4 INVESTMENT EVALUATION CRITERIA

The investment evaluation process consist of three steps, which are as follows:

- Estimation of cash flows.
- Estimation of the required rate of return (the opportunity cost of capital).
- Application of a decision rule for making the choice.

#### Investment Decision Rule

For evaluating a capital investment proposal certain factors needs to be taken into consideration. Any capital budgeting technique should take into consideration the following factors:

- It should consider all cash flows associated with the project.
- It should provide for clear and unambiguous way of separating good projects from the bad ones.
- It should help in ranking projects according to their profitability.
- 4) It should recognise the fact that bigger cash flows are preferable to smaller ones and early cash flows are preferable to later ones.

#### **Evaluation Criteria**

A number of investment criteria (Capital Budgeting Techniques) are used in practice. They may be grouped under the following two categories:

- Non Discounted Cash Flow Criteria
  - Pay Back Period (PB)
  - Accounting Rate of Return (ARR).
- 2) Discounted Cash Flows (DCF) Criteria
  - Net Present Value (NPV)
  - Internal Rate of Return (IRR)
  - Profitability Index (PI).

#### Cash Flow from Investments

A firm invests only to increase the value of their ownership interest. A firm will have cash flows in the future from its past investment decisions. When it invests in new assets, it expects the future cash flows to be greater than without the new investment.

#### Incremental Cash Flows

The difference between the cash flows of the firm with the investment project and the cash flow of the firm without the investment project both over the same period of time-is referred to as the projects incremental cash flows.

A more useful way of evaluating the change in value of the firm is the break down of the project's cash flow into two components:

- The present value of the cash flows from the projects operating activities (revenue minus operating expenses), referred to as the project's operating cash flow (OCF); and
- 2) The present value of the investment cash flows which are the cash flow associated with the expenditure needed to acquire the projects asset and any cash flow associated with the disposal of the asset.

The present value of a project's operating cash flow are generally positive and the present value of the investment cash flows is typically negative.

#### Investment Cash Flows

When we consider the cash flows of an investment we must also consider all the cash flows associated with acquiring and disposing of assets in the investment.

#### Asset Acquisition

In acquiring any asset there are three types of cash flow to consider:

- 1) Cost of the asset
- 2) Set up expenditures, including shipping and installation
- Any tax credit.

In addition to these factors two other factors viz. stack cost and the opportunity cost should be factored in the analysis of new projects.

Sunk cost is any cost that has already been incurred that does not affect future cash flows of the firm, e.g., Research and Develope not cost of new products.

In case the new project uses already existing assets (generating cash flows) the cash flows foregone to use the above said assets represents the opportunity cost that must be included in the analysis of the new project. However, these foregone cash flows are not asset acquisition cash flows, but they represent operating cash flows that could have occurred but will not because of the new project, they must be considered part of the project's future operating cash flows.

#### Asset Disposal

At the end of the useful life of an asset the hard may be able to sell it or pay someone to diamantal and hard it away. If a firm is making replacement decision the easit flow from disposal of the asset must be factored in since this easit flow is relevant to the acquisition of the new assets. For the disposal of an existing asset whether at the end of the useful life or when it is replaced, two types of easit flows must be considered.

- The firm receives or pays in disposing off the asset
- The tax consequences resulting from the disposal.

Cash flow from disposing assets = proceeds or payments from disposal of assets - Taxes from disposing assets.

The tax on disposal would depend upon three factors:

- The expected sales price.
- 2) The book value of the asset for tax purpose. The book value of an asset is (Original cost of acquisition – Accumulated depreciation). The book value is also referred to written Down Value (WDV).
- The tax rate at the time of disposal.

If a firm sells the asset for more than its book value but for less uses than its original cost, the difference between the sales price and the book value for taxable purposes (called the tax basis) is a gain taxable at ordinary tax rates. If the firm sells the asset for more than its original cost than the gain is broken into two parts:

- 1) Capital Gain: The difference between the sales price and original cost.
- Recapture of Depreciation: The difference between the original cost and the written down value.

The capital gains are taxed at special rates usually lower than the ordinary rates. The recapture of depreciation is taxed at the ordinary rate. If a firm sells off asset for less than its book value, the result is capital loss. The capital loss can be offset against capital gains.

#### **Operating Cash Flows**

In the simplest form of investment there is a cash outflow when assets are acquired and there may be either cash outflow or inflow during the economic life of the asset. The investment in assets or undertaking new projects results in change in revenue, expenditure, taxes and working capital. These are operating cash flows which result directly from the operating activities.

The operating cash flows cannot be predicted accurately for the future but an effort must be made to estimate the input for future planning. These estimates depend upon research, engineering analysis, operation research, competitor's analyses and managerial experience.

#### Estimating Cash flows

# Non Discounted Cash Flow Criteria

Capital budgeting decisions are based on future information relating to costs and benefits associated with all the proposals being considered, besides the required rate of return which measures profitability. Therefore, the following data or information is required before using any technique of capital budgeting.

#### Cash Flows

In capital budgeting decisions, the costs and benefits of a proposal are measured in terms of cash flows. Clash flows refer to cash revenue minus cash expenses or cash oriented measures of return generated by a proposal. The costs are denoted as cash outflows whereas the benefits are denoted as cash inflows. The cash flows associated with a proposal, usually, involves the following three types of cash flows:

- Initial Investment or Cash Outflows
- Net Annual Cash Inflows
- Terminal Cash Inflows.

#### Initial Investment or Cash Outflows

In case of new projects, the initial investment is an outlay of total cash outflows that takes place in the initial period (zero time period) when an asset is purchased. It comprises:

- Cost of New Asset to purchase land, building, machinery etc. including expenses
  on insurance, freight, loading and unloading, installation cost etc.
- Opportunity Cost, if the new investment makes use of some existing facilities for
  example, if a firm proposes to invest in a machine to be installed on some surplus
  land of the firm, the opportunity cost of this land would be its selling price.
- Additional Working Capital i.e., excess of current assets over current liabilities
  required to extend additional credit, to carry additional inventory, and to enlarge
  its cash balances.

In cash of replacement projects, while determining the amount of initial investment in the new asset in place of an old asset, the scrap or salvage value of the old asset is deducted from the cost and installation charges of the new asset.

The computation of cash outflows has been shown in the following Table:

# Computation of Initial Investment

|   |                                                                     | Rs.         |
|---|---------------------------------------------------------------------|-------------|
|   | Purchase Price of the Asset (including duties and taxes, if any)    |             |
| İ | Add: Insurance, Freight and Installations costs                     |             |
|   | Add: Net Opportunity Cost (if any)                                  | ,           |
|   | Add: Net increase in working capital required                       | ,           |
|   |                                                                     |             |
|   |                                                                     | į           |
|   | Less: Cash Inflows in the form of scrap of salvage value of the old |             |
| ĺ | assets (in case of replacement decisions)                           | <del></del> |
| İ | Initial Investment or Cash Outlay                                   |             |
|   | ·                                                                   | l           |

#### Net Annual Cash Inflows or Operating Cash Flows

The initial investment or cash outflows are expected to generate a series of cash inflows in the form of cash profits by the project. These cash inflows may be the same every year throughout the life of the project or may vary from one year to another. These annual cash inflows are not accounting profits, because accounting profits are affected by accruals, provisions for future losses and non-cash transactions such as depreciation, preliminary expenses etc. Therefore, cash inflows that are related to capital budgeting decisions are the after tax cash inflows. In other words, net annual cash inflow refers to the annual net income (profits) before depreciation and after tax. For the calculation of these cash inflows, first of all income before tax is calculated by deducting all cash operating expenses and depreciation from the sales revenues. After deducting the tax, the amount of depreciation is added to the income after tax. The balance is the net cash inflows from the project which can also be calculated as follows:

NCF = Sales - EXP - DEP - TAX + DEPOr = EBT - TAX + DEP

M,

The amount of net annual cash inflows may also be determined by preparing a profitability statement in the following way:

# (1) Profitability Statement (in revenue increasing decisions):

| Annual Sales Revenue                            | Rs.                                     |
|-------------------------------------------------|-----------------------------------------|
| Less: Operating Expenses including depreciation | *******                                 |
| Income before tax                               |                                         |
| Less: Income Tax                                | *************************************** |
| Net Income after tax                            | ******                                  |
| Add: Depreciation                               |                                         |
| Net Cash Inflows                                |                                         |
| THE COURT NEED TO                               | *******                                 |

# (2) Profitability Statement (in cost reduction decision):

| (A) Fost—and Gard                     | Rs.          |
|---------------------------------------|--------------|
| (A) Estimated Saving                  |              |
| Estimated Savings in direct wages     | <b>i</b> .   |
| Estimated Savings in Scrap            | ,,,,,,,,,    |
| Total Savings (A)                     | ************ |
| (B) Estimated Additional Costs        | <del></del>  |
| Additional cost of maintenance        |              |
| Additional cost of supervision        | ***********  |
| Add: Cost of indirect material        |              |
| Additional depreciation               |              |
| Total Additional Costs (B)            | ···· ·····   |
| Net Savings before tax (A-B)          |              |
| Less: Income Tax                      |              |
| Net Savings after tax                 |              |
| Add: Additional depreciation          |              |
| Net Savings after tax or Cash Inflows | *******      |

# (3) Terminal Cash Inflows

The cash inflows for the last or terminal year of the project will also include the terminal cash inflows in addition to annual cash inflows. The terminal cash inflows i.e., cash inflows to the firm in the last (terminal) year may occur in two ways:

- (i) The estimated salvage or scrap value of the project realisable at me end of the economic life of the project or at the time of its termination,
- (ii) The working capital which was invested in the beginning will no longer be required as the project is being terminated. This working capital released will be available back to the firm.

# Payback Period Method

In the Payback period method the payback period is usually expressed in years, the time in which the cash outflows equal cash inflows. This method is focused on liquidity and profitability. This method recognises the original capital invested in a project. The basic element of this method is calculation of recovery time, by accumulation of the cash inflow (including depreciation) year by year until the cash inflows equal the amount of original investment. In simple terms it may be defined as the number of years required to recover the cost of investments.

Payback period =  $\frac{\text{Initial Investments}}{\text{Annual Cashflows}} \frac{\text{Co}}{C}$ 

#### Example 3.1:

| Initial lovestment<br>Year | Project X<br>(1,00,000) |                       | Project<br>(1,00,00     |                       |
|----------------------------|-------------------------|-----------------------|-------------------------|-----------------------|
|                            | Cash inflows<br>to date | Total cash<br>inflows | Cash inflows<br>to date | Total cash<br>inflows |
| 1                          | 20000                   | 20000                 | 25000                   | 25000                 |
| 2                          | 20000                   | 40000                 | 25000                   | 50000                 |
| 3                          | 30000                   | 70000                 | 50000                   | 100000                |
| 4                          | 30000                   | 100000                | 20000                   | 120000                |
| 5                          | 50000                   | - 150000              | 10000                   | 130000                |

....

#### Solution:

In this example project Y would be selected as its payback period of three years is shorter than the four years payback period of Project X.

#### **Bail out Factor**

In the above discussion we have skipped the probability of scrapping the project before the payback period. The salvage value of the project has to be taken into consideration. The bailout payback time is reached when the cumulative cash receipts plus the salvage value at the end of a particular year equals the initial investment.

Example 3.2: Project A costs Rs. 200000 and Project B Costs Rs. 3000000 both have a ten-year life. Uniform eash receipts expected are A Rs. 40,000 p.a. and B Rs. 80,000 p.a. Calculate the payback period.

#### Solution:

Under traditional payback

Project A = 
$$\frac{\text{Rs.2,00,000}}{\text{Rs.40,000}}$$
 = 5 years  
Project B =  $\frac{\text{Rs.3,00,000}}{\text{Rs.80,000}}$  = 3.75 years

# Merits of Payback Method

- (a) It is simple and easy to understand and apply.
- (b) This method is useful in case of capital rationing and in situations where there is high amount of uncertainty.
- (c) Assuming regarding future interest rates are not changing.
- (d) Firms facing liquidity constraints can use this technique to rank projects according to their ability to repay quickly.

#### Demerits of Payback Method

- (a) This method does not take into consideration the time value of money.
- (b) This method ignores cash generation beyond payback period.
- (c) This method does not indicate whether an investment should be accepted or rejected.
- (d) This method is blased against those investments which yield return after a long period

#### Payback Period Reciprocal

An alternative way of expressing payback period is "payback period reciprocal" which is expressed as

Thus, if a project has a payback period of 5 years then the payback period reciprocal would be

$$\frac{1}{5} \times 100 = 20\%$$

# Accounting Rate of Return Method (ARR)

The Accounting Rate of Return uses the accounting information as revealed by financial statements, to measure the profitability of an investment. The accounting rate of return is the ratio of average after tax profit divided by average investment.

$$\frac{\sum_{i=1}^{n} EBIT(i-T)/n}{(I_0+I_n)/2}$$

Here average income is adjusted for interest. Of the various accounting rate of return, the highest rate of return is taken to be the best investment proposal. In case the accounting rate of return is less than the cost of capital or the prevailing interest rate than that particular investment proposal is rejected.

Example 3.3: A project with a capital expenditure of Rs. 5,00,000 is expected to produce the following profits (after deducting depreciation).

| Year | Rs.    |
|------|--------|
| 1    | 40,000 |
| 2    | 80,000 |
| 3    | 90,000 |
| 4    | 30,000 |

#### Solution:

Average annual profits = 
$$\frac{40,000 + 80,000 + 90,000 + 30,000}{4} = Rs.60,000$$

Average investment assuming no scrap value is the average of the investment at the beginning and the investment at the end.

i.e., 
$$\frac{Rs.5,00,000+0}{2}$$
 = Rs.2,50,000

Note. If the residual value is not zero but say Rs. 60,000 then the average investment would be,

$$\frac{\text{Rs. }5.00,000 + \text{Rs.}60,000}{2} = \text{Rs. }2,80,000$$

The accounting rates of return = 
$$\frac{\text{Rs.}60,000}{\text{Rs.}2,50,000} \times 100 = 24\%$$

This percentage is compared with those of other projects in order that the investment yielding the highest rate of return can be selected.

#### Example 3.4: Consider the following investment opportunity:

A machine is available for purchase at a cost of Rs. 80,000.

We expect it to have a life of five years and to have a scrap value of Rs. 10,000 at the end of the five-year period. We have estimated that it will generate additional profits over its life as follows:

| Үеаг | Rs.    |
|------|--------|
| 1    | 20,000 |
| 2    | 40,000 |
| 3    | 30,000 |
| 4    | 15,000 |
| 5    | 5,000  |

These estimates are of profits before depreciation. You are required to calculate the return on capital employed.

#### Solution:

Total profit before deprecation over the life of the machine = Rs. 1,10,000

Average profit p. a. 
$$=\frac{\text{Rs. }1,10,000}{5 \text{ years}} = \text{Rs. }22,000$$

Total depreciation over the life of the machine = Rs. 80,000 - Rs. 10,000 = Rs 70,000

Average depreciation p.a. = 
$$\frac{\text{Rs.70,000}}{\text{5 years}}$$
 = Rs. 14,000

Average annual profit after depreciation = Rs. 22,000 - Rs. 14,000 = Rs. 8,000

Original investment required = Rs. 80,000

Accounting rate of return = 
$$\frac{\text{Rs.8,000}}{20,000} \times 100 = 10\%$$

Return on average investment:

Average investment = 
$$\frac{80,000 + 10,000}{2}$$
 = Rs. 45,000

Therefore, accounting rate of return = 
$$\frac{8,000}{45,000} \times 100 = 17.78\%$$

#### Merits of ARR

- It is easy to calculate
- It is not based on cash flows but on profits
- 4 takes into consideration all the years involved in the life of the project

#### Demerits of ARR

- It does not take into consideration time value of money
- Change in depreciation policy may bring inconsistency in results
- This method fails to distinguish the size of the investment
- It is biased against short term projects
- Acceptance and rejection decisions are based on subjective management targets.

# Check Your Progress 1

A factory engaged in the manufacture of electronic goods has a ten-year old
equipment depreciated on straight-line method. The useful life of the equipment
was estimated to be 20 years with residual value of Rs.3 Lakhs (original cost of
the equipment being Rs. 23 Lakhs). The output of the equipment is 1200 units
per hour.

The management now proposes to install new equipment worth Rs. 50 Lakhs which has an estimated life of 15 years and a residual value of Rs. 5 Lakhs. The payment terms for the new equipment include a part exchange provision of Rs. 6 Lakhs in respect of the existing equipment. The output of the new equipment is 3,000 units per hours.

| Particulars               | Existing Equipment (Rs.) | New Equipment<br>(Rs.) |
|---------------------------|--------------------------|------------------------|
| Wages                     | 1,00,000                 | 1,20,000               |
| Repair and<br>Maintenance | 20,000                   | 52,000                 |
| Consumables               | 3,20,000                 | 4,80,000               |
| Power                     | 1,20,000                 | 1,50,000               |
| Allocation of Fixed Costs | 60,000                   | 80,000                 |
| Total hours run per year  | 2,400                    | 2,400                  |

You are required to prepare a comparative schedule showing total conversion cost as well as cost per 1000 units after considering interest @ 10% on net cash outflow for procuring the new equipment and also for providing for the yearly recovery of the loss suffered in the transaction.

T.Ltd. has specialised in the manufacture of a particular type of transistor. Recently, it has developed a new model and is confident of selling all the 8,000 units (new product) that would be manufactured in a year. The required capital equipment would cost Rs. 25 Lakhs and that would have an economic life of 4 years with no significant salvage value at the end of such a period. During the first four years, the promotional expenses would be as planned below: -

| Year          | 1        | 2      | 3      | 4        |
|---------------|----------|--------|--------|----------|
| Expenses (Rs) |          |        |        |          |
| Advertisement | 1,00,000 | 75,000 | 60,000 | 30,000   |
| Others        | 50,000   | 75,000 | 90,000 | 1,20,000 |

Variable costs of producing and selling a unit would be Rs. 250. Additional fixed operating costs to be incurred because of this new products is budgeted at Rs. 75,000 per year. The management expects a discounted return of 15% (after tax) on investment in the new product. You are required to work out an initial selling price per unit of the new product that may be fixed with a view to obtaining the desired return on investment. Assume a tax rate of 40% and use of straight-line method of depreciation for tax purpose.

Note: The present value of annuity of Rs. 1 received or paid in a steady stream throughout the period of four years in the future at 15 % is 3.0078.

3) A company proposes to undertake one of the two mutually exclusive projects namely, AXE and BXE. The initial outlay and annual cash inflows are as under:

| Particular                           | AXE       | BXE       |
|--------------------------------------|-----------|-----------|
| Initial Capital outlay (Rs.)         | 22,50,000 | 30,00,000 |
| Salvage Value at the end of the life | 0         | o         |
| Economic life (years)                | 4         | 7         |

| Particulars                   |      | AXE       | BXE _     |
|-------------------------------|------|-----------|-----------|
|                               | Year | Rs. Lakhs | Rs. Lakhs |
| After tax annual cash inflows | 1    | 6.00      | 5.00      |
|                               | 2    | 12.50     | 7.50      |
|                               | _ 3  | 10.00     | 7.50      |
| ·                             | 4    | 7.50      | 12.50     |
|                               | 5    |           | 13.50     |
|                               | 6    | 7_        | 10.00     |
|                               | 7    |           | 8.00      |

The company's cost of capital is 16%.

Required: (i) Calculate for each project (a) Net present value of Cash flows (b) Internal rate of return (ii) Recommend with reasons, which of the two projects should be undertaken by the Company.

#### Present value of Re. 1

| Year | 16%  | 19%  | 20%  | 21%  | 22%    | 23%  |
|------|------|------|------|------|--------|------|
| i    | .852 | .840 | .833 | .826 | .820   | .813 |
| 2    | .743 | .706 | .694 | .683 | .672   | ,661 |

# Discounted Cash Flow (DCF) Techniques

### 1) Net Present Value (NPV) Method

In this method all cash flows attributable to a capital investment project are discounted by a chosen percentage e.g., the firms weighted average cost of capital to obtain the present value of the future cash flows. If the present value of the future cash flows is higher than the present value of the investments the proposal is accepted else rejected. In order to arrive at the net present value the present value of the future cash flows is deducted from the initial investment.

$$NPV = \frac{C_1}{(1+k)} + \frac{C_2}{(1+k)^2} + \frac{C_3}{(1+k)^3} + ... + \frac{C_n}{(1+k)^n} - C_0$$

$$NPV = \sum_{t=1}^{n} \frac{C_n}{(1+k)^t} - C_0$$

Where  $C_0$  = initial investment (cash outflows)

 $C_1$  = Cash flows occurring at time t

K= discount rate

Example 3.5: A firm can invest Rs. 10,000 in a project with a life of three years.

| Year | Rs.   |
|------|-------|
| 1    | 4,000 |
| 2    | 5,000 |
| 3    | 4,000 |

The cost of capital is 10% p.a should the investment be made?

#### Solution:

Firstly the discount factors can be calculated based on Rs. 1 received in with r rate of interest in 3 year

$$\frac{I}{(1+r)^n}$$

| Year 1 | $=\frac{\text{Re.I}}{(1.10/100)}$   | $=\frac{\text{Re.1}}{(1.10)}$   | = 0.509 |
|--------|-------------------------------------|---------------------------------|---------|
| Year 2 | $=\frac{\text{Re.1}}{(1+10/100)^2}$ | $=\frac{\text{Re.1}}{(1.10)^2}$ | = 0.826 |
| Year 3 | $=\frac{\text{Re.1}}{(1+10/100)^3}$ | $=\frac{\text{Re.1}}{(1.10)^3}$ | = 0.751 |

In this chapter, the tables given at the end of the block are used wherever possible. Obviously, where a particular year or rate of interest is not given in the tables it will be necessary to resort to the basic discounting formula.

| Year | Cash flow Rs. | Discount factor | Present value Rs. |
|------|---------------|-----------------|-------------------|
| 00   | 10,000        | 1,000           | 10,000            |
| !!   | 4,000         | 0.909           | 3636              |
| 2    | 5,000         | 0.826           | 4130              |
| 3    | 4,000         | 0.751           | 3004              |
| ·    |               |                 | NPV = 770         |

Since the net present value is positive, investment in the project can be made.

Example 3.6: Machine A costs Rs. 1,00,000 payable immediately. Machine B costs Rs. 1,20,000 half payable immediately and half payable in one year's time. The cash receipts expected are as follows:

| Year (at the end) | A A    | В      |
|-------------------|--------|--------|
| 1                 | 20,000 |        |
| 2                 | 60,000 | 60,000 |
| 3                 | 40,000 | 60,000 |
| 4                 | 30,000 | 80,000 |
| 5                 | 20,000 |        |

With 7% interest which machine should be selected?

#### Solution: Machine A

| Year | Cash flow Rs.                           | DF@ 7%  | PV Rs.       |
|------|-----------------------------------------|---------|--------------|
| 0    | 1,00,000                                | 1,00000 | 1,00,000     |
| 1    | 20,000                                  | 0.93458 | 18692        |
| 2    | 60,000                                  | 0.87344 | 52,466       |
| 3    | 40,000                                  | 0.81630 | 32652        |
| 4    | 30,000                                  | 0.76289 | 22887        |
| 5    | 20,000                                  | 0.71299 | 14,260       |
|      | 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 |         | NPV = 40.897 |

#### Machine B

| Year | Cash Flow Rs | DF@ 7%   | PV Rs.      |
|------|--------------|----------|-------------|
| 0    | 60,000       | 1,00000  | 60000       |
| 1    | 60,000       | 0.93458  | 56075       |
| 2    | 60,000       | 0.857344 | 52406       |
|      | 60,000       | 0.81630  | 48978       |
| 4    | 80,000       | 0.76289  | 61.031      |
|      |              |          | NPV = 46340 |

Since Machine B has the higher NPV, our decision should be to select Machine B.

#### Merits of NPV Method:

- It recognise the time value of money
- It considers the total benefits arising out of the proposal over its lifetime.
- This method is particularly useful for selection of mutually exclusive projects

#### Demerits of NPV Method:

- It is difficult to calculate as well as understand.
- Calculating the discount rate is complicated.
- This method is an absolute measure. When two projects are considered this
  method will favour the project with the higher NPV.
- If two projects with different life spans are evaluated using this method, this method may not yield satisfactory result.

#### 2) Internal Rate of Return (IRR) Method

Internal rate of return is a percentage discount rate used in capital investment appraisals which makes the present value of the cost of the project equal to the future cash flows of the project. It is the rate of return which equates the present value of

anticipated net cash flows with the initial outlay. The IRR is also defined as the rate at which the net present value is Zero. The test of profitability of a project is the relationship between the internal rate of return (%) of the project and the minimum acceptable rate of return. The IRR can be determined by solving the following equation for r:

$$C_0 = \frac{C_1}{(1+r)} + \frac{C_2}{(1+r)^2} + \frac{C_3}{(1+k)^3} + \dots + \frac{C_n}{(1+r)^n}$$

$$C_0 = \sum_{i=1}^n \frac{C_i}{(1+r)^i} - C_0 = 0$$

The IRR equation is the same as the one used for the NPV method. The only difference is that in the NPV method, the required rate of return k is known while in the IRR method the value of r has to be determined at which the net present value becomes zero.

A project as recepted if the internal rate of return is higher than the cost of capital.

Example 3.7: A company has to select one of the following two projects:

|              | Project A | Project B |
|--------------|-----------|-----------|
| Cost         | 11000     | 10000     |
| Cash inflows |           |           |
| Year 1.      | 6000      | 1000      |
| 2            | 2000      | 1000      |
| 3            | 1000      | 2000      |
| 4            | 5000      | 10000     |

Using the internal rate of return method suggest which project is preferable.

#### Solution:

The cash inflow is not uniform and hence the internal rate of return will have to be calculated by the trial and error method. In order to have an approximate idea about such a rate, it will be better to find out the Factor. The factor reflects the same relationship of investment and cash inflows in case of payback calculation:

| F                                         | Γ/C                                       |  |
|-------------------------------------------|-------------------------------------------|--|
| Where F                                   | Factor to be located                      |  |
| I                                         | Original investment                       |  |
| C                                         | Average cash inflow per year              |  |
| The factor in case of Project A would be: | The factor in case of Project B would be: |  |
| $F = \frac{11,000}{3,500} = 3.14$         | $\vec{r} = \frac{16,000}{3,500} = 2.86$   |  |

The factor thus calculated will be located in the table given at the end of the unit on the line representing number of years corresponding to estimated useful life of the asset

This would give the expected rate of return to be applied for discounting the cash inflows, the internal rate of return.

in case of Project A, the rate comes to 10% while in case of Project B it comes to 15%.

| Year          | Cash inflows | Discounting factor at | Present value Rs. |
|---------------|--------------|-----------------------|-------------------|
|               |              | 10%`                  |                   |
| 1             | 6,000        | 0.909                 | 5454              |
| 2             | 2,000        | 0.826                 | 1652              |
| 3             | 1,000        | 0.751                 | 751               |
| 4             | 5,000        | 0.683                 | 3415              |
| Total present | ·            |                       | •                 |
| value         |              |                       |                   |

The present value at 10% comes to Rs. 11,272. The initial investment is Rs. 11,000. Internal rate of return may be taken approximately at 10%.

In case more exactness is required another trial rate which is slightly higher than 10% (since at this rate the present value is more than initial investment may be taken)

Taking a rate of 12%, the following results would emerge:

| Year          | Cash inflows<br>Rs. | Discounting factor at | Present value<br>Rs. |
|---------------|---------------------|-----------------------|----------------------|
| 1             | 6,000               | 0.893                 | 5358                 |
| 2             | 2,000               | 0.797                 | 1594                 |
| 3             | 1,000               | 0.712                 | 712                  |
| 4             | 5,000               | 0.636                 | 3180                 |
| Total present |                     |                       | 10,844               |

The internal rate of return is thus more than 10% but less than 12%. The exact rate may be calculated as follows. Difference calculated in present

| P.V. required | Rs. 11,000 |             |
|---------------|------------|-------------|
| P.V. at 10%   | Rs. 11,272 | (+) Rs. 272 |
| P.V. at 12%   | Rs. 10,844 | (-) Rs. 156 |

Actual IRR = 
$$10 \div \frac{272}{272 \div 156} \times 2 = 11.27\%$$

#### Project B

| Year                | Cash inflows<br>Rs. | Discounting factor At | Present Value Rs. |
|---------------------|---------------------|-----------------------|-------------------|
| 1                   | 1,000               | 0.870                 | 870               |
|                     | 1,000               | 0.756                 | 756               |
| 3 .                 | 2,000               | 0.658                 | 1316              |
| 4                   | 10,000              | 0.572                 | 5720              |
| Total present value |                     | •                     | 8662              |

Since present value at 15% adds up to Rs. 8,662, a lower rate of discount should be taken. Taking a rate of 10% the following will be the result.

| Year                | Cash inflows<br>Rs. | Discounting factor | Present Value Rs. |
|---------------------|---------------------|--------------------|-------------------|
| <del>- ·  </del>    | 1000                | 0.909              | 909               |
|                     | 1000                | 0.826              | 826               |
| 3                   | 2000                | 0.751              | 1502              |
| 4                   | 10000               | 0.683              | 6830              |
| Total present value |                     |                    | 10067             |

The present value at 10% cumulates Rs. 10067 which is more or less equal to the initial investment. Hence the internal rate of return may be taken as 10%. In order to have more exactness to internal rate of return can be interpolated as done in case of Project A.

| P.V. required | Rs. 10,000 |               |
|---------------|------------|---------------|
| P.V. at 10%   | Rs. 10067  | (+) Rs. 67    |
| P.V. at 15%   | Rs. 8,662  | (-) Rs. 1,338 |
| Actual IRR    | i0+67      | 10.24%        |
| l             | 67 + 1338  |               |

i hus, internal rate of return in case of Project A is higher as compared to Project B. Hence, Project A is preferable.

Example 3.8: The project cash flows from two mutually exclusive Projects A and B are as under:

| Period          | Project A           | Project B           |
|-----------------|---------------------|---------------------|
| 0 (oπttlpм)     | Rs. 22,000          | Rs. 27,000          |
| i to 4 (inflow) | Rs. 6,000 cash year | Rs. 7,000 each year |
| Project life    | Years               | 7 years             |

- Advice on project selection with reference to internal rate of return
- Will it make any difference in project selection, if the cash flow from Project B is for 8 years instead of 7 year @ Rs. 7,000 each year?

| Relevant P.V. factors at | For 7 years | For 8 years |
|--------------------------|-------------|-------------|
| 15%                      | 4.16        | 4.49        |
| 16%                      | 4.04        | 4.34        |
| 17%                      | 3.92        | 4.21        |
| 18% 3.81                 |             | 4.08        |
| 19% 3.1                  |             | 3.95        |
| . 3.60                   |             | 3.84        |

#### Solution:

Project selection based on internal rate of return.

The present values of Project A and Project B is calculated as follows:

| Discount Rate | P.V. Factor for 7 yrs. | Project A                |           | Project B    |       |  |
|---------------|------------------------|--------------------------|-----------|--------------|-------|--|
| - , <b></b>   |                        | Cash inflow<br>p.a (Rs.) | P.V (Rs.) | <del> </del> |       |  |
| 15%           | 4.16                   | 6000                     | 24960     | 7000         | 29120 |  |
| 16%           | 4.04                   | 6000                     | 24240     | 7000         | 28280 |  |
| 17%           | 3.92                   | 6000                     | 23520     | 7000         | 27440 |  |
| 18%           | 3.81                   | 6000                     | 22,860    | 7000         | 26670 |  |
| 19%           | 3.71                   | 6000                     | 22260     | 70000        | 25970 |  |
| 20%           | 3.60                   | 6000                     | 216000    | 7000         | 25200 |  |

#### Project A

Since the original investment in Project A is Rs. 22,000 its IRR will fall between 19% and 20%.

| n | _ |  |
|---|---|--|
| к | ς |  |
|   |   |  |

| P.V. of cash inflows at 19% | 22,260 |
|-----------------------------|--------|
| P.V. of cash inflows at 20% | 21,600 |
| Difference                  | 660    |

Now, IRR of Project A is calculated as follows, by applying the formula for interpretation:

IRR = 
$$19 + \frac{22,260 - 22,000}{660} \times 1 = 19.4\% \text{ (approx)}$$

#### Project B

Since the original investment in project B is Rs. 27,000, its IRR will fall between 17% to 18%.

|                             | Rs.    |
|-----------------------------|--------|
| P.V. of cash inflows at 17% | 27,440 |
| P.V. of cash inflows at 18% | 26,670 |
| - Difference -              | 770    |

Now, the IRR of Project B is ascertained as follows:

IRR = 
$$17 + \frac{27,440 - 27,000}{770} \times 1 = 17.6\%$$
 (approximately)

#### Selection of Project:

The IRR of Project A and Project B are 19.4% and 17.6% respectively. A project can be selected because of its higher IRR over the other Projects. Hence Project A is to be preferred as it has a higher IRR of 19.4%.

# (i) Calculation of IRR of Project B whose cash flow from the Project is for 8 years instead of 7 years

| Discount factor | P.V. factor for<br>8 years Rs. | Cash inflow each year Rs. | P.V. of cash inflows |
|-----------------|--------------------------------|---------------------------|----------------------|
| 15%             | 4.49                           | 7,000                     | 31,430               |
| 16%             | 4.34                           | 000                       | 30380                |
| 17%             | 4.21                           | 7,000                     | 29470                |
| 18%             | 4.08                           | 7000                      | 28,560               |
| 19%             | 3.95                           | 7,000                     | 27,650               |
| 20%             | 3.84                           | 7,000                     | 26,880               |

Since, the original investment in Project B is Rs. 27, 000, its IRR will fall between 19% to 210%.

|                             | <b>R</b> s |
|-----------------------------|------------|
| P.V. of cash inflows at 19% | 27650      |
| P.V. of cash inflows @ 20%  | 26880      |
| Difference                  | 770        |

Now, IRR of Project B is calculated as follows:

IRR 
$$19 + \frac{27,650 - 27,000}{770} \times 1 = 19.8\% (approximately)$$

# Selection of Project:

With the change in cash inflow of Project B from, 7 years to 8 years, its IRR is also improved from 17.6% to 19.8% and it is also higher than the IRB of Project A (i.e., 19.4%). Hence, Project B can be selected (based on its 8 years of cash inflows).

Example 3.9: Two investment projects are being considered with the following cash flow projections:

|                | Project I | Project 2 |
|----------------|-----------|-----------|
| Initial outlay |           |           |
| Cash inflows   |           |           |
| Year 1         | 10        | 120       |
| Year 2         | 30        | 90        |
| Year 3         | 210       | 50        |
| Year 4         | 50        | . 10      |

#### Required:

- (a) Prepare on a single graph present value profiles for each project. Use interest rates from 0% to 20% at 5% intervals.
- (b) Using the graph paper determine the IRR for each of the projects
- (c) State for which range of costs of capital Project 1 would be preferred to Project 2.

#### Solution:

#### Workgroups

| Year      | Undiscou<br>-nted<br>cash flow | Discounted         | at 5 %               | Discounted         | at 10%                     | Discounted<br>at 15% | d                          | Discounter<br>at 20 % | <b>.</b> .          |

| 3         | 50  | 0.864 | 43.2        | 0.51  | 37.6  | 0.657            | 32.9  | 0.579        | 29.0  |
| 4         | 10  | 0.823 | 8.2         | 0.683 | 6.8   | 0.572            | 5.7   | 0.482        | 4.8   |
| <u>:</u>  | 70  |       | 47.2        |       | 27.8  |                  | 11.0  | 9.102        | 7.3   |

| (i) IRR Project 1  | 15% (to nearest %) |
|--------------------|--------------------|
| (ii) IRR Project 2 | 19% to nearest %)  |

If the cost of capital is <9% (rounded) Project 1 would be preferred.

If the cost of capital is > 9% rounded project 2 would be preferred

The later cash inflows from Project 1 are more heavily discounted the higher the rate of interest in comparison with the earlier cash inflows on Project 2.

#### Merits of IRR Method:

- (a) It considers the time value of money
- (b) It takes into account total cash inflows and cash outflows.

#### Demerits of IRR Method:

- (a) It involves tedious calculations, based on trial and error method
- (b) It produces multiple rates which can be confusing
- (c) Assessment of cash flows can't be estimated accurately
- (d) Single discount rate ignores varying future interest rates.

#### 3. Profitability Index (PI) Method

Another time adjusted method of evaluating the investment proposals is the Benefit Cost (B/C) ratio or Profitability Index (PI). Profitability Index is the ratio of the present value of cash inflows at the required rate of return, to the initial cash outflow of the investment. The formula for calculating benefit cost ratio or profitability index is as follows:

$$PI = \frac{PV \text{ of cash inf lows}}{Initial cash outlay} = \frac{PV(C_1)}{C_0} = \sum_{i=1}^{n} \frac{C_i}{(i+k)^i} \div C_0$$

A project may be accepted if it's PI is greater than one.

Example 3.10: The following mutually exclusive projects can be considered:

| Particulars                | Project A. | Rs.       |
|----------------------------|------------|-----------|
| Particulars                | Project A  | Project B |
| 1. P.V of cash inflows     | 20,000     | 8,000     |
| 2. Initial cash outlay     | 15,000     | 5,000     |
| 3. Net present value       | 5,000      | 3,000     |
| 4. Profitability index 1/2 | 1.33       | 1.60      |

#### Solution:

Accordingly to the NPV Method, Project A would be preferred, whereas accordingly to Profitability Index Project B would be preferred.

Although PI method is based on NPV, it is a better evaluation technique than NPV in a situation of capital rationing. For example, two projects may have the same NPV of Rs. 10,000 but Project A requires initial outlay of Rs, 1,00,000 where as B only Rs. 50,000. Project B would be preferred as per the yardstick of the PI method.

#### Example 3.11:

Original outlay Rs 8,000 Life of the project 3 years

Rs. 4,000 p.a for 3 years

Cash inflows
Cost of capital

10% p.a.

Expected interest rates at which the cash inflows will be re-invested:

| Year end | % |
|----------|---|
| 1        | 8 |
| 2        | 8 |
| 3        | 8 |

#### Solution:

First of all, it is necessary to calculate of the total compounded sum which will be discounted to the present value.

| Year | Cash<br>inflow<br>Rs. | Rate of<br>Interest % | Years for investment | Compoun<br>ding<br>factor | Total compounding sum (Rs) |
|------|-----------------------|-----------------------|----------------------|---------------------------|----------------------------|
| 1    | 4,000                 | 8                     | 2                    | 1.166                     | 4,664                      |
| 2    | 4,000                 | 8                     | 1                    | 1.080                     | 4,320                      |
| 3    | 4,000                 | 8                     | 0                    | 1.000                     | 4,000<br>12,984            |

Now, we have to calculate the present value of Rs. 12,984 by applying the discount rate of 10%

Present Value = Compounded value of cash inflow

$$(1+i)^{i}$$

$$= \frac{12,984}{(1.10)^3} = \text{Rs.}9,755 = 12984 \times 0.7513 = \text{Rs.}9,755$$

(0.7513 being the p.v. of Re. 1 received after 3 years).

Here, since the present value of reinvested cash flows i.e Rs. 9,755 is greater than the original cash outlay of Rs. 8,000, the project would be accepted under the terminal value criterion.

Example 3.12: XYZ Ltd. is implementing a project with a initial capital outlay of Rs. 7,600. Its cash inflows are as follows:

| Үеаг | Rs.   |
|------|-------|
| 1    | 6,000 |
| 2    | 2,000 |
| 3    | 1,000 |
| 4    | 5,000 |

The expected rate of return on the capital invested is 12% p.a calculate the discounted payback period of the project.

#### Solution:

Computation of present value of cash flows.

| Year | Cash inflow Rs. | Discounted factor @ 12% | Present<br>Value Rs. |
|------|-----------------|-------------------------|----------------------|
| 1    | 6,000           | 0.893                   | 5,358                |
| 2    | 2,000           | 0.797                   | 1,594                |
| 3    | 1,000           | 0.712                   | 712                  |
| 4    | 5,000           | 0.636                   | 3,180                |
|      | ·               | Total P.V               | 10,844               |

The discounted payback period of the project is 3 years i.e., the discounted cash inflows for the first three years (i.e., Rs. 5358 +Rs. 1594 + 712) is equivalent to the initial capital outlay of Rs. 7600.

Example 3.13: A Company is considering a capital investment proposal where two alternatives involving differing degrees of mechanisation are being considered. Both investments would have a five-year life.

In Option 1 new machinery would cost Rs. 2,78,000 and in Option 2 Rs. 8,05,000. Anticipated scrap values after 5 years are Rs. 28,000 and 1,50,000 respectively. Depreciation is provided on a straight-line basis. Option 1 would generate annual cash inflows of Rs. 1,00,000 and Option 2, Rs. 2,50,000. The cost of capital is 15%.

### Required:

- (a) Calculate for each option:
  - (i) the payback period
  - (ii) the accounting rate of return, based on average book value
  - (iii) the net present value
  - (iv) the internal rate of return
- (b) Identify the preferred option, giving reasons for your choice.
  - (a) (i) Payback period:

Option 
$$1 = \frac{2,78,000}{1,00,000} = 2.78$$
 years

Option 
$$2 = \frac{8,05,000}{2,50,000} = 3.32 \text{ years}$$

# (ii) Accounting rate of return:

#### Option 1

| Annual Depreciation       | 2,78,000 – 28,000<br>5                                 | 50.000   |
|---------------------------|--------------------------------------------------------|----------|
| Annual Profit             | Rs. 50,000 (1, 00,000 cash flow - 50,000 depreciation) |          |
| Average Investment        | 2,78,000 + 28,000<br>2                                 | 1,53,000 |
| Accounting rate of return | $\frac{50,000}{1,53,000} \times 100\%$                 | 33%      |

# Option 2

| Annual depreciation       | 8,05,000 – 1,50,000<br>5         | Rs. 1,31,000                                         |
|---------------------------|----------------------------------|------------------------------------------------------|
| Annual Profit             | Rs. 1,19,000                     | Rs. 2,50,000 cash flow-<br>Rs. 1,31,000 depreciation |
| Average investment        | 8,05,000 + 1,50,000<br>2         | Rs. 4,77,500                                         |
| Accounting rate of return | $\frac{1,19,000}{4,77,500}$ ×100 | 25%                                                  |

# (iii) Net present value (at 15% cost of capital):

#### Option 1

| Year 0   |                  |     | (2,78,000) |
|----------|------------------|-----|------------|
| Year 1-5 | (1,00,000×3.353) |     | 3,35,300   |
| Year 5   | (28,000×0.497)   |     | 13,900     |
|          |                  |     | 71,200     |
|          | <u> </u>         | NPV |            |

# Option 2

Approx cumulative discount factor (5 year) = 
$$\frac{7,40,000}{2,50,000}$$
 = 2.96 = 20%

# NPV at 20%

(Rs.)

| Year 0   |                           |     | (8,05,000) |
|----------|---------------------------|-----|------------|
| Year 1-5 | $(2,50,000 \times 3.353)$ |     | 8,38,300   |
| Year 5   | (1,50,000× 0.497)         |     | 74,500     |
|          |                           | NPV | 1,07,800   |

# (iv) Internal rate of return:

# Option 1

Approx: Commutative discount factor (5 years) =  $\frac{2,68,000}{1,00,000}$  = 2.68 = 25%

# NPV at 25 %

| Year 0   |                   |     | (2,78,000) |
|----------|-------------------|-----|------------|
| Year 1-5 | (1,00,000x 2.689) |     | 2,68,900   |
| Year 5   | (28,000 x 0.328)  |     | 9,200      |
|          |                   | NPV | 100        |
|          |                   |     |            |

# IRR 25%

# Option 2

Approx cumulative discount factor (5 years)  $\frac{7,40,000}{2.50,000} = 2.96 = 20\%$ 

| Year 0   | ø                         |         | (8,05,000) |
|----------|---------------------------|---------|------------|
| Year 1-5 | (2,50,000 ×2.991)         |         | 7,47,700   |
| Year 5   | $(1,50,000 \times 0.402)$ |         | 60,300     |
|          |                           | . NPV - | 3,000      |

IRR = 
$$15\% + \left(5 \times \frac{1,07,800}{1,04,800}\right) = 20.1\%$$
 ... IRR 20%

Both projects are indicated as being worthwhile when the discounted cash flow returns are compared with the cost of capital. The payback period, accounting rate of return, and internal rate of return calculations all points to option 1 being preferred. The net present value calculation, on the other hand, favours option 2.

The basic reason for the different ranking provided by the NPV method is an absolute money measure which takes into account the scale of the investment as well as the quality. The other three appraisal methods provide measure, which express returns relative to the investment. Investments of comparable relative quality will have the same returns regardless of scale. For example, an annual profit of Rs. 20 on an investment of Rs. 100 will have the same relative return as an annual profit of Rs. 2,00,000 on an investment of Rs. 10,00,000. If one is concerned especially with quality then the relative measures would provide the required ranking. However, if the objective is to maximise wealth, investment worth should be measured by the surplus net present value generated, over and above the cost of the capital.

In the situation in the question the differential between option 1 and option 2 provides an internal rate of return of 18% as follows:

#### NPV at 18%

| $\overline{}$ |                           |     | <del></del> |
|---------------|---------------------------|-----|-------------|
| Year 0        |                           | i   | (5,27,000)  |
| Year 1-5      | $(1,50,000 \times 3.127)$ |     | 4,69,100    |
| Year 5        | (1,22,000 × 0.437)        |     | 53,300      |
|               |                           | NPV | 4,600       |
| L             |                           | ł   |             |

The additional investment of Rs. 5,27,000 in option 2 is worthwhile as the IRR of 18 % exceeds the cost of capital.

Finally, it should be recognised that both the payback method and the accounting rate of return method have deficiencies. They do not provide an adequate measure of investment worth. The percentage return including the accounting rate of return calculations is not comparable with the cost of the capital.

The PI method is a conceptually sound method. It takes into consideration the time value of money. It is also consistent with the value maximisation principle. Like NPV and IRR methods the PI method also requires estimations of cash flows and discount rate. In practice, the estimation of discount rates and cash flows is difficult.

### Check Your Progress 2

1) Precision Instruments is considering two mutually exclusive Project X and Y: Following details are made available to you.

|               |        | Project X | Project Y |  |
|---------------|--------|-----------|-----------|--|
| Project Cost  |        | 700       | 700       |  |
| Cash inflows: | Year 1 | 100       | 500       |  |
|               | Year 2 | 200       | 400       |  |
|               | Year 3 | 300       | 200       |  |
|               | Year 4 | 450       | 100       |  |
|               | Year 5 | 600       | 100       |  |
|               | Total  | 1,650     | 1,300     |  |

Assume no residual values at the end of the fifth year. The firm's cost of capital is 10% required, in respect of each of the two projects: (i) Net present value, using 10% discounting (ii) Internal rate of return: (iii) Profitability index.

#### Present Value of Re.1

| Year | 10%  | 25%  | 26%  | 2%   | 28%  | 36%  | 37%  | 38%  | 40%           |
|------|------|------|------|------|------|------|------|------|---------------|
| 1    | .909 | .800 | .794 | .787 | .781 | .735 | .730 | .725 | .714          |
| 2    | .826 | .640 | .630 | .620 | .610 | .541 | .533 | .525 | .510          |
| 3    | .751 | .512 | .500 | .488 | .477 | .398 | .389 | .381 | .364          |
| 4    | .683 | .410 | .397 | .384 | .373 | .292 | .284 | .276 | . <b>26</b> 0 |
| 5    | .621 | .328 | .315 | .303 | .291 | .215 | .207 | .200 | .186          |

2) XYZ Ltd. Has decided to diversity its production and wants to invest its surplus funds on a profitable project. It has under consideration only two projects. "A" and "B". The cost of Project "A" is Rs. 100 Lakhs and that of "B" is Rs. 150 Lakhs. Both projects are expected to have a life of 8 years only and at the end of this period "A" will have a salvage value of Rs 4 Lakhs and "B" Rs. 14 Lakhs. The running expenses of "A" will be Rs. 35 Lakhs per year and that of "B" Rs. 20 Lakhs per year. In both case the company expects a rate of return of 10%. The company tax rate is 50%. Depreciation is charged on a straight-line basis. Which project should the company take up?

Note: Present value of annuity of Re. 1 for eight years at 10% is 5.335 and present value of Re. 1 received at the end of the eight-year is 0.467.

3) National Electronics Ltd. An electronic goods manufacturing company, is producing a large range of electronic goods. It has under consideration two projects "X" and "Y", each costing Rs. 120 Lakhs.

The projects are mutually exclusive and the company is considering the selection of one of the two projects. Cash flows have been worked out for both the projects and the details are given below. "X" has a life of 8 years and "Y" has a life of 6 years. Both will have zero salvage value at the end of their operational lives. The company is already making profits and its tax rate is 50%. The cost of capital of the company is 15%.

| At the end of the year | Project "X" | Project "Y"  | Preset value of |
|------------------------|-------------|--------------|-----------------|
|                        | (In Lakh    | s of rupees) | rupee at 15%    |
| 1                      | 25          | 40           | 0.870           |
| 2                      | 35          | 60           | 0.756           |
| 3                      | 45          | 80           | 0.685           |
| 4                      | 65          | 50           | 0.572           |
| 5                      | 65          | 30           | 0.497           |
| 6 ·                    | 55          | 20           | 0.432           |
| 7                      | 35          | -            | 0.36            |
| 8                      | 15          | -            | 0.327           |

The company presently follow straight-line method of depreciating assets. Advises the company regarding the selection of the project.

#### 3.5 SUMMARY

Capital investment decisions are complex decisions as they involve estimating future cash flows associated with that particular investment. There are broadly two techniques which are used for appraising the worth of an investment project:

- (i) Discounted cash flow criteria
- (ii) Non discounted cash flow criteria.

The basic difference between these two techniques is that the former uses the concept of the time value of money, whereas in the latter technique absolute returns are used.

## 3.6 SELF-ASSESSMENT QUESTIONS/EXERCISES

- 1) Write short notes on 'Internal Rate of Return'.
- 2) Write short notes on 'Capital Rationing'.
- 3) Write short notes on an 'Average Rate of Return'.
- 4) What is meant by 'Internal Rate of Return' of a project? How do you calculate I.R.R (Internal Rate of Return) given the initial investment on the Project and cash flows arising during the expected life of the Project?
- Write short notes on 'Accounting Rate of Return'.
- Distinguish clearly between Average rate of return and Internal rate of return.
- 7) Explain the operation of any two techniques (one a discounting method and another a none-discounting one for evaluation of investment decisions.
- 8) Write short notes on 'Profitability Index'.
- 9) What criteria must be satisfied for an investment evaluation to be ideal?
- 10) Can the payback period method of evaluating projects identify the ones that maximise wealth? Explain.

- 11) Consider two projects, AA and BB, that have identical, positive net present values, but project BB is riskier than AA. If these projects are mutually exclusive, what is your investment decision?
- 12) Can the net present value method of evaluating projects identify the ones that will maximise wealth? Explain.
- 13) The decision rules for the net present value and the profitability index methods are related. Explain the relationship between these two sets of decision rules.
- What is the source of the conflict between net present value and the profitability index decision rules in evaluating mutually exclusive projects?
- 15) Suppose you calculate a project's net present value to be Rs.3,000, what does this mean?
- 16) Suppose you calculate a project's profitability index to be 1.4. What does this mean?
- 17) The internal rate of return is often referred to as the yield on an investment. Explain the analogy between the internal rate of return on an investment and the yield-to maturity on a bond.
- 18) The net present value method and the internal rate of return method may produce different decisions when selecting among mutually exclusive projects. What is the source of this conflict?
- 19) The modified internal rate of return is designed to overcome a deficiency in the internal rate of return method. Specifically, what problem is the MIRR designed to overcome?
- 20) Based upon our analysis of the alternative techniques to evaluate projects, which method or methods are preferable in terms of maximising owners' wealth?
- 21) You are evaluating an investment project, Project ZZ, with the following cash flows?

| Period | Cash Flow |
|--------|-----------|
|        | Rs.       |
| 0      | 100,000   |
| 1      | 35,027    |
| 2      | 35,027    |
| 3      | 35,027    |
| 4      | 35,027    |

#### Calculate the following:

- (a) Payback period
- (b) Net present value, assuming a 10% cost of capital
- (c) Net present value, assuming a 16% cost of capital
- (d) Profitability index, assuming a 10% cost of capital
- (e) Internal rate of return

26) You are evaluating an investment project, Project YY with the following cash flow:

| Period | Cash Flow |
|--------|-----------|
|        | Rs.       |
| 0      | 100,000   |
| 1      | 43,798    |
| . 2    | 35,027    |
| . 3    | 35,027    |
| 4      | 35,027    |

#### Calculate the following:

- (a) Payback period
- (b) Net present value, assuming a 10% cost of capital
- (c) Net present value, assuming a 14% cost of capital
- (d) Profitability index, assuming a 10% cost of capital
- (e) Profitability index, assuming a 14% cost of capital
- (f) Internal rate of return
- 27) You are evaluating an investment project, Project XX with the following cash flows:

| Period | Cash Flow |
|--------|-----------|
|        | Rs.       |
| 0      | 200,000   |
| 1      | 65,000    |
| 2      | 65,000    |
| 3      | 65,000    |
| 4      | 65,000    |
| 5      | 65,000    |

#### Calculating the following:

- (a) Payback period
- (b) Net present value, assuming a 10% cost of capital
- (c) Net present value, assuming a 15% cost of capital
- (d) Profitability index, assuming a 10% cost of capital
- (e) Profitability index, assuming a 15% cost of capital
- (f) Internal rate of return

Æ,

28) Suppose you are evaluating two mutually exclusive projects, Project/Item 1 and Project/Item 2 with the following cash flows:

| End of Year Cash Flows |        |           |
|------------------------|--------|-----------|
| Year                   | Item 1 | Item 2    |
|                        | Rs.    | Rs.       |
| 2000_                  | 10,000 | Rs.10,000 |
| 2001                   | 3,293  | 0         |
| 2002                   | 3,293  | 0         |
| 2003                   | 3,293  | 0         |
| 2004                   | 3,293  | 14,641    |

- (a) If the cost of capital on both project, is 5% which project, if any, would you choose? Why?
- (b) If the cost of capital on both projects is 8% which project, if any, would you choose? Why?
- (c) If the cost of capital on both projects is 11% which project, if any, would you choose? Why?
- (d) If the cost of capital on both projects is 14% which projects, if any, would you choose? Why?
- (e) At what discount rate would you be indifferent between choosing Item 1 and Item 2?
- (f) On the same graph, draw the investment profiles of Item 1 and Item 2. Indicate the following terms:
  - Crossover discount rate
  - NPV of Item 1 if the cost of Capital is 5%
  - NPV of Item 2 if cost of Capital is 5%
  - IRR of Item 1
  - IRR of Item 2

#### 29) Consider the results after analysing the following five projects:

| Projects | Outlay  | NPV     |
|----------|---------|---------|
|          | Rs.     | Rs.     |
| AA       | 300,000 | 10,000  |
| BB       | 400,000 | 20,000  |
| CC       | 200,000 | 10,000  |
| DD       | 100,000 | 10,000  |
| EE       | 200,000 | -15,000 |

Suppose there is a limit on the capital budget of Rs.600,000. Which projects should we invest in, given our capital budget?

#### 30) Consider these three independent projects?

| Period          | FF      | GG      | НН      |
|-----------------|---------|---------|---------|
|                 | Rs.     | Rs.     | Rs.     |
| 0               | 100,000 | 200,000 | 300,000 |
| 1               | 30,000  | 40,000  | 40,000  |
| 2               | 30,000  | 40,000  | 40,000  |
| 3               | 30,000  | 40,000  | 40,000  |
| 4               | 40,000  | 120,000 | 240,000 |
| Cost of Capital | 5%      | 6%      | 7%      |

- (2) If there is no limit on the capital budget, which projects would you choose? Why?
- (b) If there is a limit on the capital budget of Rs.300,000, which projects would you choose? Why?

## 3.7 SOLUTIONS/ANSWERS

#### Check Your Progress 1

#### 1) Working notes:

(i) Calculation of Depreciation per annum

Existing equipment = 
$$\frac{\text{Rs.23,00,000} - \text{Rs.3,00,000}}{20 \text{ year}} = \text{Rs.1,00,000 p.a.}$$

New equipment = 
$$\frac{Rs.50,00,000 - Rs.5,00,000}{15 \text{ year}} = Rs.3,00,000 \text{ p.a.}$$

(ii) Loss on sale of existing equipment

|                                         | (KS.)     |
|-----------------------------------------|-----------|
| Cost                                    | 23,00,000 |
| Less Deprecation (Rs)1,00,000×10 years) | 10,00,000 |
|                                         | 13,00,000 |
| Less: Exchange value                    | 6,00,000  |
| Loss on exchange with new equipment     | 7,00,000  |

Loss per annum = Rs. 7,00,000/10 years = Rs. 70,000 p.a

(iii) Calculation of Interest (cash outflow) on purchase of new equipment

|                                      | (Rs.)     |
|--------------------------------------|-----------|
| Cost of new equipment                | 50,00000  |
| Less Exchange value of old equipment | 6,00,000  |
| Deprecation                          |           |
| Net cash outflow                     | 44,00,000 |
| Interest (Rs. 44,00,000×10/100)      | 6,00,000  |
|                                      |           |

Comparative statement showing total conversation cost as well as cost 1,000 units.

| Particulars                                | Equipment |           |
|--------------------------------------------|-----------|-----------|
|                                            | Old       | New       |
| Annual Depreciation                        | 1,00,000  | 3,00,000  |
| Loss on sale of old equipment              | -         | 70,000    |
| Interest on capital                        | -         | 4,40,000  |
| Wages                                      | 1,00,000  | 1,20,000  |
| Repairs and Maintenance                    | 20,000    | 52,000    |
| Consumables                                | 3,20,000  | 4,80,000  |
| Power                                      | 1,20,000  | 1,50,000  |
| Allocation of fixed expenses               | 60,000    | 80,000    |
| Total conversation Cost (i)                | 7,20,000  | 16,92,000 |
| Total run hours p.a (ii)                   | 2,400     | 2,400     |
| Operating Cost per hour (rs.) (i)          | 300       | 705       |
| (ii)                                       |           |           |
| Output per hour (Units)                    | 1,200     | 3000      |
| Operating Cost (per 1,000 Units Units Rs.) | 250       | 235       |

#### Analysis:

On replacement of existing equipment with new equipment there is a saving of Rs. 15 (i.e., Rs. 250- Rs. 235) per 1,000 units. Hence, replacement is recommended.

2) Let the initial selling price per unit of new product be 'x'

Then total sales =  $8000 \text{ units } \times x = 8,000 \text{ x}$ Calculation of cash costs p.a

 $(\mathbf{R}\mathbf{s}.)$ 

|                            | ·                      | (**3.)    |
|----------------------------|------------------------|-----------|
| Variable costs             | (8,000 units × Rs. 250 | 20,00,000 |
| Advt. And other expenses   |                        | 1,50,000  |
| Addl. Fixed operating cost |                        | 75,000    |

**IRR** 

Project AXE = 
$$16 + \frac{2.51}{2.51 - 0.59} \times 4 = 16 + 5.23 = 21.23\%$$
  
Project BX =  $16 + \frac{4.46}{4.46 + 3.08} \times 8 = 16 + 4.73 = 20.73\%$ 

#### (ii) Analysis:

The IRRs of both projects AXE and BXE are very similar, with barely one-half % separating them from each other. In such a case of marginal difference, it would be necessary to re-validate key assumptions and use sensitivity analysis to determine impact upon project returns to changes in key variables. The project that is less sensitive to such variations may be preferred. Also while NPVs and IRRs may provide a basis for financial decision-making, it is very important to check whether either project is in line with corporate strategy. The one more in tune with such strategy may be preferred even if the financial numbers are not the highest among the competing proposals.

### 4.0 INTRODUCTION

The decisions regarding long-term investment are based on judgments on future cash flows, the uncertaininty of these cash flows and the opportunity cost of the funds to be invested. As far as working capital management decisions are concerned the underlying criteria are the same but, there is an increased focus on liquidity and management of operating cycle. Operating cycle refers to the time it takes to convert current assets (excluding cash) into cash. The operating cycle in part determines how long it takes for a firm to generate cash from current assets and therefore the risk and cost of its investment in current assets or working capital. Working capital is the capital that can be immediately put to work to generate the benefits of capital investment. Working capital is also known as current capital or circulating capital.

The major difference between long-term financial management and short-term financial management (also referred to as working capital management) is with regards to quantum and frequency of cash flows. In case of long-term financial management the amount of funds dedicated are usually large and one off decisions whereas, in case of short term financing the amount of funds dedicated are relatively small and frequently repetitive in nature. The impact of long term financing ranges over an extended period of time usually 15-20 years or more, whereas, the impact of short term financing is within the operating cycle usually ranging form three months to a year.

There are two concepts of working capital:

- (i) Gross working capital
- (ii) Net working capital

The gross working capital is the total of all current assets. Net working capital is the difference between current assets and current liabilities. The constituents of working capital are shown in *Table 4.1*. Part A of this table shows current assets and part B of this table shows current liabilities.

Table 4.1: Constituents of current assets and current liabilities

| Part A                                 | Part B                                   |
|----------------------------------------|------------------------------------------|
| Current Assets                         | Current Liabilities                      |
| Cash and Bank Balances                 | Sundry Creditors                         |
| Inventories                            | Trade Advances                           |
| Raw material and components, work in   | Borrowings (short term)                  |
| progress/process (WIP) finished goods, | Outstanding expenses                     |
| trade debtors, loans and advances,     | Taxes and dividends payable,             |
| investments, pre-paid expenses         | Other liabilities maturing within a year |

This unit deals with certain aspects and considerations related to overall working capital management and is divided into the following sections:

- characteristics of current assets
- · factors influencing working capital requirements
- levels of current assets
- current assets financing policy
- profit criterion for current assets
- · operating cycle analysis
- impact of inflation on working capital
- approaches to bank financing
- methods for estimating working capital requirements
- source of working capital finance

#### 4.1 OBJECTIVES

After going through this unit, you would be able to:

- understand the concept and characteristics of working capital;
- understand the difference between net working capital and gross working capital;
- understand the concept of operating cycle;
- understand how the various factors influence working capital requirements; and
- understand the various methods of computing working capital.

#### 4.2 CHARACTERISTICS OF CURRENT ASSETS

Working Capital management is influenced by two characteristics of current assets which are as follows (i) short life span (ii) swift transformation into other asset forms.

Current assets have a short life span, cash balances can remain idle for 7 to 14 days, while accounts receivable usually have a life span ranging from 30 to 90 days and inventories may be held for 30 to 100 days.

Each current asset is transformed into another current asset. This transformation will depend upon the time and degree of synchronisation of procurement, production, sales and collection of receivables.

The production process starts with the purchase of raw material resulting in either decrease in each or creation of accounts payable. The raw material purchased from

the inventory, which is further processed to produce finished goods. Finished goods are sold resulting in either increase in cash or creation of accounts receivable while the discharge of accounts payable results in cash outflow. The current asset cycle and the operating cycle are shown in *Figures 4.1* and *4.2* respectively.

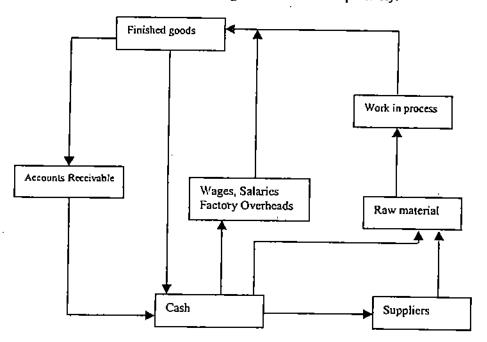

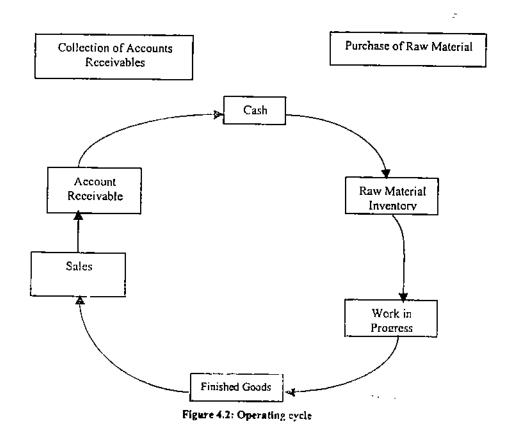

Figure 4.1: Current asset cycle

Ťc:

#### 4.3 OPERATING CYCLE CONCEPTS

Operating cycle refers to the average time lapse between the acquisition of raw material and the final cash realisation. This concept is used to ascertain the requirements of cash working capital to meet the operating expenses. Figure 4.3 depicts the operating cycle and the cash cycle.

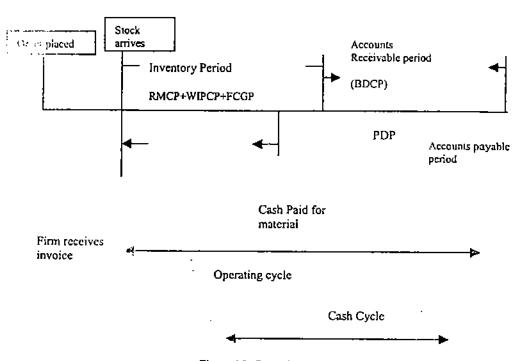

Figure 4.3: Operating cycle

From the above figure you can easily estimate that the time which lapses between the purchase of raw material and the collection of cash for sales is referred to as operating cycle, whereas the time length between payment of raw material purchases and collection of cash for sales is referred to as cash cycle.

In the operating cycle the inventory period consists of:

- (i) Raw Material Conversion Period (RMCP), which is the time gap between purchase of raw material and the issuance of raw material for production.
- (ii) Work in Progress Conversion Period (WIPCP), which is the time gap between issuance of raw material and the conversion of raw material into finished goods.
- (iii) Finished Goods Conversion Period (FGCP), which is the time gap between sale of goods and the transfer of finished goods from shop floor to the warehouse.
- (iv) Book Debt Collection Period (BDCP), which is the time gap between sales and realisation of cash

Now the length of the operating cycle for direct material can be calculated as follows:

Gross operating cycle = RMCP+WIPCP+FGCP+BDCP

Net Operating Cycle = Gross Operating Cycle = PDP = RMCP+WIPCP+FGCP+BPCP-PDP

Where PDP is the Payment Deferral Period PDP is the credit time extended by suppliers to 1 ay for the purchases.

# 4.4 FACTORS INFLUENCING WORKING CAPITAL REQUIREMENTS

The working capital needs of a firm are influenced by many factors. The important ones are as follows:

Nature of business: The working capital requirement of a firm is closely related to the nature of its business. In general businesses with short operating cycles will require lesser amount of working capital as compared to businesses with longer operating cycles. The firms engaged in manufacturing and trading will require more working capital as large amount of funds are locked in inventories and receivables. In general utility companies and service companies (water supply, electricity undertakings, telecom companies) will require lesser amount of working capital as compared to manufacturing and trading concern. Table 4.2 shows the relative proportion of investment in current assets and fixed assets of certain industries.

| Current Assets % | Fixed Assets % | Industries                                                              |  |  |
|------------------|----------------|-------------------------------------------------------------------------|--|--|
| 10-20<br>20-30   | 80-90<br>70-80 | Hotels and restaurants Electricity generation and Distribution          |  |  |
| 30-40<br>40-50   | 60-70<br>50-60 | Aluminum and Shipping<br>Iron and Steel, Basic<br>industries, Chemicals |  |  |
| 50-60<br>60-70   | 40-50<br>30-40 | Tea plantation<br>Cotton textiles, Sugar                                |  |  |
| 70-80<br>80-90   | 20-30          | Edible oils, Tobacco                                                    |  |  |

Table 4.2: Proportion of current assets and fixed assets

- Business Cycle: During economic boom there is increased production which
  require higher amount of working capital, but this is partly off set by reduced
  operating cycle. At the time of economic recession again there would be need
  for increased working capital, as large amount of funds would be locked in
  inventories and receivables.
- 3. Seasonal Variations: Commodities with seasonal demand results in increased level of working capital requirement. This could be offset by scaling down operations during the lean part of the year and increasing production prior to demand period. Products manufactured with raw materials, the production of which is seasonal (agricultural products) would require higher amount of working capital.
- 4. Size of Business: Size of the firm is also a determining factor in estimating working capital requirements. The size of a firm may be measured either in terms of scale of operations, or assets or sales. Large firms require more amount of working capital for investment in current assets and also to pay current liabilities than smaller firms. However, in some cases even a small firm may need more working capital as a cushion against cash flow interruptions.
- 5. Change of Technology: Changes in technology generally leads to improvements in the efficient processing of raw material, decrease in wastages, higher productivity and more speedy production. All these improvements lead to reduction in investment in inventories, which in turn leads to reduction in working capital requirement. If changed technology results in shorter manufacturing process the lesser would be the requirements of working capital.

- 6. Length of Operating or Working Capital Cycle: As explained in the section dealing with operating cycle concept of working capital the amount of working capital will depend upon the duration of operating cycle. The operating cycle in turn is dependent on many other variables such as length of manufacturing process, debtors collection period, etc..
- Firms credit policy: The credit policy of the firm also impacts working capital needs. A firm following liberal credit policy will require more amount of working capital, as a large amount of funds would be blocked in debtors.

## 4.5 SOURCES OF WORKING CAPITAL

### Sources of Working Capital Finance

Working capital finance may be classified into the following:

#### Spontaneous Source of Finance

Finance which naturally arise in the course of business is known as spontaneous financing. Trade creditors, credit from employees, credit from suppliers of services, etc., are the examples of spontaneous financing.

#### Negotiated Financing

Financing which has to be negotiated with lenders, say commercial banks, financial institutions, general public is known as negotiated financing. This kind of financing may either be short-term in nature or long-term.

Before spontaneous and negotiated sources of finance, the latter is more expensive and inconvenient to raise. Spontaneous source of finance reduces the amount of negotiated financing. Working capital can be classified into long-term and short-term sources, which can be analysed as shown in Figure 4.4

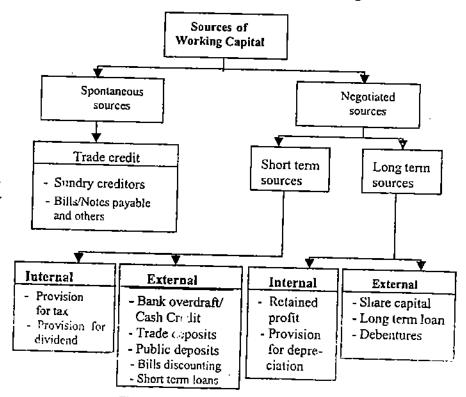

Figure 4.4: Financing mix of working capital

Trade credit is a spontaneous source of finance which is normally extended to business organization depending on the custom of the trade and competition prevailing in the industry and relationship of the suppliers and buyers. This form of business credit is more popular since it contributes to about one-third of the total short-term credit. The dependence on this source of working capital finance is higher due to negligible cost of finance as compared to negotiated finances.

It is a facility whereby business firms are allowed by the suppliers of raw materials, services, components and parts, etc., to defer immediate payment to a definite future period. Trade credit is generated when a company acquires supplies, merchandise or materials and does not pay for them immediately. If a buyer is able to get the credit without any legal evidence or instrument, it is termed as 'Open Account Trade Credit' and appears in the Balance Sheet of the buyer as sundry creditors. When an instrument is given, notably negotiable instrument, in acknowledgement of the debt, the same appears in the final statement as Bills or Notes payable.

#### Invoice Discounting or Factoring

If a company makes sales to a number of customers on credit terms it will have to wait for two or even three months before its debtors pay what they owe. This means that the debtors must be financed by the company, and the idea of factoring is to passover to the finance of debtors from the selling company to a special factoring, finance company or Bank. The factoring company after reviewing the amount of the debts and the creditworthiness of the debtors, will pay the selling company, at the end of the month in which the sales were made, the amount it can expect to receive from the debtors (less a percentage). In this way the selling company receives its money one or two months earlier than would normally be the case. The factoring company will then collect the debts from the selling company's customers when they fall due.

#### Bills of Exchange

A bill is defined as an unconditional order in writing, addressed by one person to another, signed by the person giving it, requiring the person to whom it is addressed to, to pay on demand, or at a fixed or determinable future time, a sum certain in money to or to the order of a specified person or to the bearer.

#### Funds Generated from Operations

Funds generated from operations, during an accounting period, increase working capital by an equivalent amount. The two main components of funds generated from operations are profit and depreciation. Working capital will increase along with the extent of funds generated from operations.

#### Deferred Tax Payments

Another source of short-term funds similar in character to trade credit is the credit supplied by the tax authorities. This is created by the interval that lapses between the earning of the profits by the company and the payment of the taxes due on them.

#### Accrued Expenses

ŗ

Another source of spontaneous short-term financing is the accrued expenses that arise from the normal conduct of business. An accrued expense is an expense that has been incurred, but has not yet been paid. For most firms, one of the largest accrued expenses is likely to be employees' accrued expenses. For

large firms, the accrued wages held by the firm constitute an important source of financing. Usually, accrued expenses are not subject to much managerial manipulation.

#### Working Capital Finance from Banks

Working capital is an essential requirement for any business activity. Banks in India today constitute the major suppliers of working capital credit to any business activity. Recently, however, some term lending financial institutions have also announced schemes for working capital financing.

#### Bank Overdrafts

Short-term borrowing of the kind made available principally by the clearing banks in the form of overdrafts is very flexible. When the borrowed funds are no longer required they can quickly and easily be repaid. It is also comparatively cheap. The banks will impose limits on the amount they can lend.

#### Line of Credit

Line of credit is a commitment by a bank to lend a certain amount of funds on demand specifying the maximum amount of unsecured credit the bank will permit the customer to borrow at any point of time. The bank will charge extra cost over the normal rate of interest since it will keep the funds available to be made use of the funds by the customer at all times.

#### Revolving Credit

The revolving credit facility will be given by the banker to the customer by giving certain amount of credit facility on a continuous basis. The borrower will not be allowed to exceed the limits sanctioned by the bank. Such credit facilities will be given by the banks to their customers in the form of over draft facility. In customer financing, credit cards are known for this source of financing.

#### Bridge Loans

Bridge loans are available from the banks and financial institutions when the source and timing of the funds to be raised is known with certainty. When there is a time gap for access of funds, then for speeding up of or implementation of the projects, bridge loans will be provided. Such loans are repaid immediately after raising the funds. The cost of bridge loans is normally higher than the working capital facilities provided by the banks. At present the RBI has put a restriction on banks in giving bridge loans to curb malpractices in capital market dealings.

#### Transaction Loans

These loans are provided by the Banker for short periods for a specific activity like financing for a civil contract work. When the customer receives payment, the transaction will be repaid by the customer. The lender will evaluate the ability of the cash flow of the borrower before sanctioning this type of loan.

#### Public Deposits

Deposits from the public is one of the important source of finance particularly for well established big companies with a huge capital base. The period of public deposits is restricted to a maximum of three years at a time and hence,

Working Capital Decisions

2

this source can provide finance only for short term to medium term, which could be more useful for meeting the working capital needs of the company. It is advisable to use the amounts of public deposits for acquiring assets of long-term nature unless its pay back period is very short.

#### Suppliers Line of Credit

Under this scheme, non-revolving line of credit is extended to the seller to be utilised within a stipulated period. Assistance is provided to manufactures for promoting sale of their industrial equipments on deferred payment basis. While on the other hand, this credit facility can be availed of by actual users for purchase of plant/equipment for replacement of modernisation scheme only.

#### Hire Purchase and Leasing

It is a most familiar form of medium term financing in acquiring plant and machinery, vehicles, etc. In hire purchase transactions, the purchaser of goods will acquire the possession of goods on payment of initial deposit, but the title to the goods will only be passed on from seller to the purchaser after the payment of the remaining installments.

#### Intercorporate Loans and Deposits

In the present corporate world, it is a common practice of companies with surplus cash to lend to other companies for a short period normally ranging from 60 days to 180 days. The rate of interest will be higher than the bank rate of interest and will depend on the financial soundness of the borrower company. This source of finance reduces the intermediation of banks in financing.

#### Commercial Paper (CP)

The CP introduced into the Indian financial market, on the recommendations of the Vaghul Committee has become a popular debt instrument of the corporate world. CP is a debt instrument for short-term borrowing, that enables highly rated corporate borrowers to diversify their sources of short-term borrowings, and provides an additional financial instrument to investors with a freely negotiable interest rate. The maturity period ranges from three months to less than a year. Since it is a short-term debt, the issuing company is required to meet dealers' fees, rating agency fees and any other relevant charges. Commercial paper is short-term unsecured promissory note issued by corporations with high credit ratings.

#### Salient Features:

Eligibility Criteria: A company can issue CP only if:

- Its tangible net worth is not less than Rs. 4 crore as per the latest audited balance sheet;
- 2) Its fund based working capital limit is not less than Rs. 4 crore;
- 3) It has obtained the specified minimum credit rating for issuance of CP from an approved credit rating agency. Such credit rating should not be more than 2 months old at the time of issue of the CP;
- 4) Its borrowal account is classified as 'standard' by the financing bank; and
- 5) It has a minimum current ratio of 1.33:1 as per the latest audited balance sheet and the classification of current arsets and liabilities are in conformity with the Reserve Bank guidelines issued from time to time.

#### **Bank Guarantees**

Bank guarantee is one of the facilities that the commercial banks extend on behalf of their chents in favour of third parties who will be the beneficiaries of

82

the guarantees. In fact, when a bank guarantee is given, no credit is extended and banks do not part with any funds. There will be only a guarantee to the beneficiary to make payment in the event of the customer on whose behalf the guarantee is given, defaults on his commitment. So, if the customer fails to pay as per the terms of the guarantee, the banker giving the guarantee has to pay and claim reimbursement from his client. The banker's liability arises only if this customer fails to pay the beneficiary of the guarantee. That is why bank guarantee limits are known as non-borrowings limits or not-fund limits.

#### Asset Securitisation

The emerging financial scenario has created a fierce competition among the companies to raise funds through innovative financial products from the capital and/or money markets. Additional source of capital can be accessed through securitisation, relieving the normal receivable/deposit collection process for finance companies and banks, without disturbing the liabilities side of the balance sheet. Companies can raise finance and increase their lending activity thus, enhancing profitability.

#### Meaning:

The term 'Securitisation' refers to both switching away from bank intermediation to direct financing via capital market and/or money market, and the transformation of a previously illiquid asset like automobile loans, mortgage loans, trade receivables, etc., into marketable instruments.

"Securitisation is a process of transformation of illiquid asset into security which may be traded later in the open market."

"Securitisation is the process of transforming the assets of a lending institution into negotiable instruments."

#### Consortium Lending and Loan Syndication by Banks

When the individual bank finds it difficult to meet the huge financial requirements of a borrower, it gives rise to multiple banking which may be in the form of (i) Consortium Lending or (ii) Loan Syndication.

Consortium Lending: When the financial needs of a single unit are more than a single bank can cater to, then more than one bank comes together to finance the unit jointly spreading the risk as well as sharing the responsibilities of monitoring and finance. The arrangement is called 'consortium lending' and it enables 'he industrial units to mobilise large funds for its operations.

Loan Syndication: There are two methods of syndication: direct lending and through participation.

- Direct Lending: In respect of "direct lending" all the lenders sign the loan
  agreement independently with the borrower and agree to lend upto their
  respective share. The obligations of the syndicate members are several and
  they do not underwrite one another.
- Through Participation: In this method of lending the lead bank is the only lending bank, so far as the borrower is concerned, that approaches the other lender to participate in the loan. This normally takes place without the knowledge of the borrower. The lead bank grants a certain portion of the load to each participant as agreed. It also agrees to pay to the participants a prorate share of receipts from the borrower.

# 4.6 STRATEGIES OF WORKING CAPITAL MANAGEMENT

So far banks were the sole source of funds for working capital needs of the business sector. At present more finance options are available to a Finance Manager to enable smooth functioning of his/her firm. Depending on the risk exposure of business, two strategies are evolved to manage working capital.

#### Conservative Working Capital Strategy

A conservative strategy suggests the carrying high levels of current assets in relation to sales. Surplus current assets enable the firm to absorb sudden variations in sales, production plans, and procurement time without disrupting production plans. Additionally, the higher liquidity levels reduce the risk of insolvency. But lower risk translates into lower return. Large investments in current assets lead to higher interest and carrying costs and encouragement for inefficiency. But a conservative policy will enable the firm to absorb day to day business risks. It assures continuous flow of operations and eliminates worry about recurring obligations. Under this strategy, long-term financing covers more than the total requirement for working capital. The excess cash is invested in short term marketable securities and in need, these securities are sold off in the market to meet the urgent requirements of working capital.

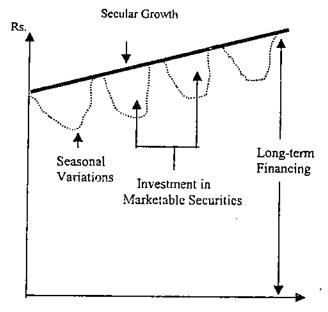

Figure 4.5: Conservative working capital strategy

#### Aggressive Working Capital Strategy

Under this approach current assets are maintained just to meet the current liabilities without keeping any cushion for the variations in working capital needs. The core working capital is financed by long-term sources of capital, and seasonal variations are met through short-term borrowings. Adoption of this strategy will minimise investment in net working capital and ultimately lower the cost of financing working capital. The main drawback of this strategy is that it necessitates frequent financing and also increases risk as the firm is vulnerable to sudden shocks.

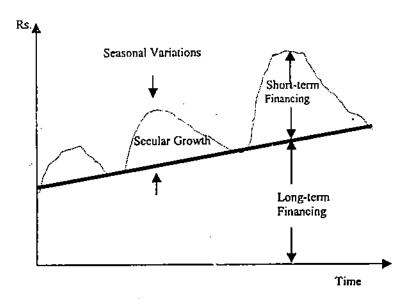

Figure 4.6: Aggressive working capital strategy

A conservative current asset financing strategy would go for more long-term finance which reduces the risk of uncertainty associated with frequent refinancing. The price of the firm has to pay for adopting of this strategy is higher financing costs since, long-term rates will normally exceed short term rates. But when such an aggressive strategy is adopted, sometimes the firm runs into mismatches and defaults. It is the cardinal principle of corporate finance that long-term assets should be financed by long-term sources and short-term assets by a mix of long and short-term sources.

# 4.7 ESTIMATING WORKING CAPITAL REQUIREMENTS

The most ticklish problem that is faced by the finance manager is the determination of the amount of working capital requirement at a particular level of production. To solve this problem, estimates of future requirements of current assets and cash flows are made. With the help of these cash flows, future requirements and availability of cash for current assets are ascertained. For this purpose a working capital forecast is prepared involving some calculations after taking into consideration the factors affecting working capital (as discussed above). All these calculations are made on cash basis. Thus, estimation of working capital is the determination of future cash requirements of a firm so that the liquidity of financial resources may be maintained. Following methods are generally used in estimating working capital for the future period:

- a) Operating Cycle Method
- b) Net Current Assets Forecasting Method
- c) Projected Balance Sheet Method
- d Adjusted Profit and Loss Method
- e) Cash flow Forecast Method

#### a) Operating Cycle Method

Under this method, total operating expenses for a period are divided by the number of operating cycles in the relevant period to calculate the cash requirement for working capital. Thus, the computation of total operating expenses, operating cycle period and

number of operating cycles in the year is essential for estimating the amount of working capital, as discussed below:

- Operating Expenses: These expenses include purchase of raw materials, l. direct labour cost, fuel and power, administrative and selling and distribution expenses for a specific period for which estimates can be obtained from cost records. Depreciation, write off of intangible assets are not included in these expenses because these are non-cash items. Similarly, tax and dividend being appropriation of profits are also excluded from these expenses. Capital expenses are also not included in it. While estimating the amount of these expenses fact like changes in product mix, introduction of a new product or discontinuation of an old product should be made for the changes occurring in expenses and price level due to internal and environmental factors.
- Operating Cycle Period: Period of operating cycle means the total number of 2. days involved in the different stages of operation commencing from the purchase of raw materials and ending with collection of sale proceeds from debtors after adjusting the number of days credit allowed by suppliers. Thus, the operating cycle is the total period involved in different stages of operations, which may be calculated by using the following formula:

OC = M+W+F+D-C

Here. OC = Operating Cycle Period

M = Material Storage Period

W = Work in Process or Conversion Period

F = Finished Goods Storage Period

D = Debtors Collection Period

C = Creditors Payment Period

Material Storage Period (M)

AverageStock of Raw Materials Daily Average Consumption

(Opening Stock + Closing Stock)1/2 Material Consumed for the Year/365

WIP or Conversion Period (W) = AverageStock of Work - in - Process

Daily Average Production Cost

(Opening WIP+Closin g WIP)/2 Total Production Cost / 365

- Total Production or Factory Cost is calculated by adding opening stock of (a) work-in progress in the total of direct material, labour and factory overheads and deducting from this the closing work-in-progress. Depreciation is excluded being a non-cash item.
- Sometimes the Conversion Period is also known as the Production Cycle  $\{h\}$ Period. In case, information about this period is given, then conversion period is not to be calculated with the above formula.

Finished Goods Storage Period (F) =  $\frac{Average Stock of Finished Goods}{DailyAverage Cost of Goods Sold}$ 

OR

(Opening Stock + Closin gStock)/2 Total Cost of Goods Sold / 365

Cost of Goods Sold is calculated by adding excise duty with the factory cost after adjusting opening and closing stock of finished goods. Administration/selling and distribution expenses are not considered in it, because, in financial accounting, stock of finished goods is valued at production or factory cost.

Notes: In respect of the above formula the following points are worth noting:

- The 'Average' value in the numerator stands for the average of opening balance and closing balance of the respective items. However, if only the closing balance is available, then even the closing balance may be taken as 'Average'.
- The figure '365' represents number of days in a year. However, there is no hard and fast rule and sometimes even 360 days are considered.
- In the calculation of M, W, F, D and C, the denominator is calculated at cost basis and the profit margin is excluded. The reason being that there is no investment of funds in profits.
- In the absence of any information, total purchases and total sales be treated as credit.
- Number of Operating Cycles: The number of operating cycles in a period are determined by dividing the number of days in a year i.e.365 by the length of not operating cycle. Expressed as formula-

4. Amount of Working Capital: Once the operating expenses and the number of operating cycles have been determined, the amount of actual working capital required is calculated by dividing the total operating expenses for the period by the number of operating cycles in that period. For example, if the total operating expenses for the year amounts to Rs. 45,000 and the number of operating cycles in a year are assumed to be 3, the amount of working capital would be Rs.15,000 (Rs.45000/3).

Alternatively, the working capital may be calculated by using the following formula:

$$WC = C + \frac{OC}{N} \times CS$$

where WC = Working Capital

C = Cash Balance Required

OC = Operating Cycle Period

CS = Estimated Cost of Goods sold

N = Number of days in year

Working Capital Decisions

5. Provision for Contingencies: After ascertaining the amount of working capital as above, a certain amount say 5% or 10% may be added to cover contingencies. It is to be noted that facts based on estimates may not be cent percent accurate. Therefore, this provision is made to cover probable error in these calculations.

Example 4.1: Himalaya Ltd.'s Profit and Loss Account for the year ended 31" December 2005 is given below. You are required to calculate the working capital requirements under operating cycle method.

Trading and Profit & Loss Account For the year ended 31th December, 2005

| Particulars              | Rs.      | Particulars       | Rs.      |
|--------------------------|----------|-------------------|----------|
| To Opening stock:        |          | By Sales (Credit) | 1,00,000 |
| Raw Materials            | 10,000   | By Closing stock: | 2,00,000 |
| Work-in-Progress         | 30,000   | Raw Materials     | 11,000   |
| Finished Goods           | 5,000    | Work-in-progress  | 30,500   |
| To Purchases (Credit)    | 35,000   | Finished Goods    | 8,500    |
| To Wages & Mfg. Expenses | 15,000   |                   | 0,500    |
| To Gross Profit c/d      | 1,50,000 |                   | 1,50,000 |
|                          |          |                   | 55,000   |
| To Administrative Exp.   | 15,000   | By Gross Profit   | ,000     |
| To Selling and Dist.Exp. | 10,000   | b/d               |          |
| To Net Profit            | 30,000   |                   |          |
| Total                    | 55,000   | Total             | 55,000   |

Opening and closing debtors were Rs. 6,500 and 30,500 respectively, whereas opening and closing creditors were Rs 5,000 and Rs. 10,000 respectively.

Solution: Computation of Operating Cycle

#### 1. Raw Material Storage Period:

$$= \frac{\text{Average Stock of Raw Material}}{\text{Daily Average Consumption}}$$

$$= \frac{(\text{Rs.}10,000 + 11,000)/2}{\text{Rs.}34,000/365}$$

$$= \frac{\text{Rs.}10,500}{\text{Rs.}93.15} = 113 \text{ days}$$

Raw Material Consumed = Opening Stock +Purchases - Closing Stock = Rs.10, 000+35,000-11,000 = Rs.34, 000

#### 2. Conversion or Processing Period

$$= \frac{\text{AverageStock of work} - \text{in} - \text{Progress}}{\text{DailyAverage Production Cost}}$$

$$= \frac{(\text{Rs},30,000 + 30,500)/2}{\text{Rs}.48,500/365}$$

$$= \frac{\text{Rs}.30,250}{132.88}$$

| Financial Mar | nagement |
|---------------|----------|
| and Decisions |          |

| Production Cost:                  | Rs.    |
|-----------------------------------|--------|
| Opening Work-Progress             | 30,000 |
| Add: Material Consumed (as Above) | 34,000 |
| Add: Wages and Mfg. Expenses      | 15,000 |
|                                   | 79,000 |
| Less: Closing Work-in Progress    | 30,500 |
|                                   | 48,500 |

#### 3. Finished Goods Storage Period

$$= \frac{\text{AverageStock of Finished Goods}}{\text{Daily Average Cost of Goods Sold}}$$

$$= \frac{(\text{Rs.5,000} + 8,500)/2}{\text{Rs.45,000/365}}$$

$$= \frac{\text{Rs.6,750}}{\text{Rs.123.29}} = 55 \text{ days}$$

| Cost of goods sold:                   | Rs.    |
|---------------------------------------|--------|
| Opening Stock of Finished Goods       | 5,000  |
| Add: Production Cost (As above)       | 48,500 |
|                                       | 53,500 |
| Less: Closing Stock of Finished Goods | 8,500  |
| <del>-</del>                          | 45.000 |

#### 4. Debtors Collection Period

$$= \frac{\text{Average Debtors}}{\text{Daily Average Sales}}$$

$$= \frac{(\text{Rs.6,500} + 30,500)/2}{\text{Rs.1,00,000/365}}$$

$$= \frac{\text{Rs.18,500}}{\text{Rs.273.97}} = 67 \text{ days}$$

#### 5. Creditors Payment Period

= 
$$\frac{\text{Average Creditors}}{\text{Daily Average Purchases}}$$
  
=  $\frac{(\text{Rs.5,000+10,000})/2}{\text{Rs.35,000/365}}$   
=  $\frac{\text{Rs.7,500}}{\text{Rs.95.89}}$  = 78 days

#### 6. Net Operating Cycle Period:

$$OC = M + W + F + D - C$$
  
= 113+228+55+67-78  
= 385 Days

#### Computation of Working Capital Requirement

1. Number of Operating Cycle Per Year = 
$$\frac{365}{\text{Net Operating Cycle Period}}$$
  
=  $\frac{365}{385} = 0.948$ 

| Total Operating Expenses:                                                                               | Rs                                   |
|---------------------------------------------------------------------------------------------------------|--------------------------------------|
| Total cost of Production (as per 3) Add: Administrative Expenses Add: Selling And Distribution Expenses | 45,000<br>15,000<br>10,000<br>70,000 |

3. Working Capital Required = Total Operating Expenses
No. of Operating Cycles in a year

$$=\frac{\text{Rs.70,000}}{0.948}=\text{Rs.73,839}$$

Alternatively, WC=C+
$$\frac{OC}{N}$$
×CS

where WC = Working Capital

C = Cash Balance Required

OC = Operating Cycle Period

CS = Estimated Cost of Goods Sold

N = Number of days in a year

$$WC = O + \frac{385}{365} \times Rs. 70,000$$
$$= Rs. 73,835$$

Note: The difference is due to approximation in the number of operating cycle:

## Check Your Progress 1

- From the following information taken from SNS Company; calculate the working capital required using the operating cycle method.
  - (1) Annual sales are estimated at 1,00,000 units @ 20 per unit.
  - (2) Production and sales quantities coincide and will be carried on evenly throughout the year and production cost is: Material Rs. 10; Labour Rs.4; Overheads Rs. 4 per unit.
  - (3) Customers are given 60 days credit and 40 days credit is taken from suppliers.
  - (4) 30 days of supply of raw material and 15 days supply of finished goods are kept in stock.
  - (5) The production cycle is 30 days and all materials are issued at the commencement of each production cycle.
  - (6) A cash balance equal to one-third of the other average working capital is kept for contingencies.

2) From the following information, extracted from the books of a manufacturing company, compute the operating cycle period and working capital required.

#### Period Covered: 365 days

| Average Period Allowed by Supplier   | : 16 days | Rs.       |
|--------------------------------------|-----------|-----------|
| Average total of debtors outstanding |           | 48,000    |
| Raw Material Consumption             |           | 4,40,900  |
| Total Production Cost                | 74        | 10,00 000 |
| Total Cost of sales                  |           | 10,50,000 |
| Sales for the year                   |           | 16,00.000 |
| Value of Average Stock Maintained:   |           |           |
| Raw Material                         |           | 32,000    |
| Work-Progress                        |           | 35,000    |
| Finished goods                       |           | 26,000    |

#### b) Net Current Assets Forecasting Method

This is the most practical method of estimating working capital requirements. Under this method, the finance manager prepares a working capital forecast. In preparing this forecast, first of all, an estimate of all the current assets is made on a monthly basis. Thus, estimate of stock of raw materials, amount of raw material that will remain in process, stock of finished goods and outstanding amount from debtors and other receipts will have to be made. This should be followed by an estimate of current habilities comprising outstanding payments for material, wages, rent, and administrative—may other expenses. The difference between the forecasted amount of current assets and current habilities gives the networking capital requirements of the firm.

To this amount, a flat percentage would be added by way of provision for contingencies. The resulting figure will be the amount of total estimated working capital required. From this, bank finance is to be subtracted, if available. The remaining balance will be the amount of working capital that is to be managed by the firm. The method of forecasting working capital needs is 'cash' technique as all transactions are shown on cash cost basis.

#### Statement showing working Capital Requirements

| (A)   | Current                                                | Amount                                  | Ns. |
|-------|--------------------------------------------------------|-----------------------------------------|-----|
| (1)   | Stock of Raw Material (formonth consumption)           |                                         |     |
| (ii)  | (a) Work-in-Process (for months)                       |                                         |     |
|       | (b) Direct Labour                                      | ***                                     |     |
|       | (c. Overheads                                          |                                         |     |
| (iii) | Stock of finished Goods (formonth's sales)             |                                         |     |
|       | (a) Raw Material                                       |                                         |     |
|       | (b) (b) Labour                                         |                                         |     |
|       | (c) Overheads                                          |                                         |     |
| (iv)  | Sundry Debtors or Receivables ( i. r. month's sales)   |                                         |     |
|       | (a) Raw Material                                       |                                         |     |
|       | (b) Labour                                             |                                         |     |
|       | (c) Overheads                                          |                                         |     |
|       |                                                        | • • • • • • • • • • • • • • • • • • • • |     |
| (v)   | Payment in Advance (if any)                            |                                         |     |
| (vi)  | Balance of Cash (required to meet day-to-day expenses) |                                         |     |

Total Working Capital Required

| 6) Cod tory (for month's purchase of Raw Materials) |             |
|-----------------------------------------------------|-------------|
| o) by a Payman of Expanses                          |             |
| (Outstanding expensesmonth's)                       |             |
| (iii) Others (if any)                               |             |
| Net Working Capital (A) – (B)                       | <del></del> |
| Add: Provision for Contingencies                    |             |

Example 4.2: Prepare an estimate of working capital requirements from the following information of a trading concern:

| (a)        | Projected Annual Sales                              | 1,00,000      |
|------------|-----------------------------------------------------|---------------|
| (b)        | Selling Price                                       | Rs.8 per unit |
| (c)        | Profit Margin on Sales                              | 25%           |
| (d)        | Average Credit Period Allowed to Customers          | 8 weeks       |
| (e)        | Average Credit Period Allowed by Suppliers          | 4 weeks       |
| <b>(I)</b> | Average Stock Holding in terms of Sales Requirement | 12 weeks      |
| (g)        | Allow 10% for Contingencies                         | -             |

#### Solution:

### Statement Showing working Capital Requirements

| Current Assets                 | Rs.                                                                                                                                                                               |
|--------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Stock (12 Weeks)               | 1,38,462                                                                                                                                                                          |

| Rs. 6,00,000 × 8/52)           | -1                                                                                                                                                                                |
| Current Liabilities            | 46,154                                                                                                                                                                            |
| Creditors (4 weeks)            |                                                                                                                                                                                   |
| (6,00,000 × 4/52)              |                                                                                                                                                                                   |
| Net Working Capital (A-B)      | 1,84,616                                                                                                                                                                          |
| 10% for Contingencies          | 18,462                                                                                                                                                                            |
| Total Working Capital Required |                                                                                                                                                                                   |
|                                | Stock (12 Weeks) (Rs.6,00,000×12/52) Debtors (8 weeks) Rs. 6,00,000×8/52) Current Liabilities Creditors (4 weeks) (6,00,000×4/52) Net Working Capital (A-B) 10% for Contingencies |

#### Working Notes

(i) Cost of Goods Sold

Sales = Rs.  $1,00,000 \times 8 = Rs. 8,00,000^{\circ}$ 

Profits = Rs.  $8.00,000 \times 25\% = Rs. 2,00,000$ 

Cost of Sales = Rs. 8.00,000-2,00.000 = Rs. 6.00,000

- (ii) As, it is a trading concern; hence cost of sales is treated as purchases.
- (iii) Profits have been ignored because profits may or may not be used as source of working capital.

Example 4.3: On 1st January, 2005 the Board of Directors of Paushak Limited wanted to know the amount of working capital required to meet the programme they have planned for the year. From the following information, prepare an estimate of working capital requirements.

Issued Share CapitalRs. 2,00,0008% DebenturesRs. 50,000Fixed Assets as on 1st JanuaryRs. 1,25,000

Production during the previous year was 60,000 units and it is proposed to maintain the same during 2005. The expected ratio of cost to selling price are: Raw Materials 60%; direct wages 10% Overheads 20%.

The following further information is available:

- Raw materials are expected to remain in the stores on an average for two
  months before being issued to the production unit.
- b) Each unit of production is expected to be in process for one month.
- Finished goods will stay in the warehouse awaiting dispatch to customers for approximately three months.
- d) Credit allowed by creditors is two months from the date of delivery of raw materials.
- e) Credit given to debtors is three months from the date of dispatch.
- f) Selling price is Rs 5 per unit.

#### Solution:

## Statement Showing working Capital Requirements

| (a)   | Current Assets                                                                                              | Rs.                       | Rs.                |
|-------|-------------------------------------------------------------------------------------------------------------|---------------------------|--------------------|
| (i)   | Stock of raw material (2 months)<br>(Rs.15,000×2)                                                           |                           | 30,000             |
| (ii)  | Work-in-Progress (1 month) Material (Rs.15,000×1) Labour (Rs.2,500×1) Overheads (Rs.5,000×1)                | 15,000<br>2,500<br>5000   | 22,500             |
| (iii) | Stock of finished Goods (3 months) Material (Rs.15,000×3) Labour (Rs.2,500×3) Overheads (Rs.5,000×3)        | 45,000<br>7,500<br>15,000 | 67,000             |
| (iv)  | Debtors (3 months) Material (Rs. 15,000×3) Labour (Rs. 2,500×3) Overheads (Rs. 5,000×3)                     | 45,000<br>7,500<br>15,000 | 67,000<br>1,87,500 |
| (B)   | Current Linbilities: Creditors for raw Material (2 months) Rs. 15,000×2) Net working Capital required (A-B) |                           | 30,000<br>1,57,500 |

#### Working Notes:

Debtors have been valued and calculated on sales basis which would be Rs. 75,000 (60,000×5×3×12). Hence, working capital taking Current Assets at total value

|                                                  | Rs.      |
|--------------------------------------------------|----------|
| Working Capital required as per above statement  | 1,57,500 |
| Add: Increase in Debtors (Rs. 75,000-Rs.67, 500) | 7,500    |
|                                                  | 1,65,000 |

2) Monthly amount of each element of cost is calculated as follows-Total sales 60,000×5 = Rs. 3,00,000

(a) Raw Materials = 
$$\frac{3,00,000 \times 60}{100 \times 12}$$
 = Rs.15,000

(b) Direct Labour = 
$$\frac{3,00,000 \times 10}{100 \times 12}$$
 = Rs.2,500

(c) Overheads = 
$$\frac{100 \times 12}{3,00,000 \times 20} = \text{Rs.5,000}$$

- 3) It is assumed that labour and overhead in the beginning. Hence, full amount of labour and overhead is included in work-in-progress. If it is assumed that labour and overheads accrued evenly, half of the amount will be included in work-inprogress.
- 4) Additional capital required will be Rs. 35,500 (Rs. 1,57,500-1,25,000), because Rs. 1,25,000 is available from long-term sources (share capital debentures-Fixed assets)

## Check Your Progress 2

1) You are required to prepare for the Board of Directors of Suman Ltd. a statement showing the working capital needed to finance a level of activity of 5,200 units of output. You are given the following information:

| Elements of Cost | Amount per unit (Rs.) |  |  |
|------------------|-----------------------|--|--|
| Raw Material     | 8                     |  |  |
| Direct Labour    | 2                     |  |  |
| Overheads        | 6                     |  |  |
| Total Cost       | 16                    |  |  |
| Profit           | 4                     |  |  |
| Selling Price    | 20                    |  |  |

(i) Raw Materials are in stock, on an average one month, (ii) Materials are in process, on an average half a month, (iii) Finished Goods are in stock on an average 6 weeks, (iv) Credit allowed to Debtors is two months, (v) Lag in payment of wages is 1<sup>1/2</sup> weeks, (vi) Assume 52 weeks in a year and 4 weeks in a month.

Cash in hand and at Bank is expected to be Rs. 5 300. You are informed that production is carried on evenly during the year and wages and overheads accrue evenly.

2) From the following information, you are required to estimate the net working capital:

|                                   | Cost Per unit (Rs.) |
|-----------------------------------|---------------------|
| Raw Material                      | 200                 |
| Direct Labour                     | 100                 |
| Overhead (excluding Depreciation) | 250                 |
| Total Cost                        | 550                 |

Estimated data for the forthcoming period are given below:

| Raw Material in Stock                              | Average 6 weeks        |
|----------------------------------------------------|------------------------|
| Work-in-progress (assume 50% completion stage with | Average 2 weeks        |
| full material consumption)                         |                        |
| Finished Goods in Stock                            | Average 4 weeks        |
| Credit Allowed by Suppliers                        | Average 4 weeks        |
| Credit Allowed to Debtors                          | Average 6 weeks        |
| Cash at Bank Expected to be                        | Rs.75,000              |
| Selling Price                                      | Rs. 800 per unit       |
| Output                                             | 52,000 units per annum |

Assume that production is sustained at an even pace during 52 weeks of the year. All sales are on credit basis.

#### c) Projected Balance Sheet Method

Under this method, estimates, of different assets (excluding cash) and liabilities are made taking into consideration the transactions in the ensuring period. Thereafter, a balance sheet is prepared based on these forecasts. Assets and liabilities are called 'Projected balance sheet'. The difference between assets and liabilities of this balance sheet is treated as shortage or surplus cash of that period. If the total liability is more than total assets, it represents excess cash, which is not required by the firm. The management may plan for its investment. On the contrary, if total assets are more than total liabilities, then it indicates the deficiency of working capital, which is to be arranged by the management either from bank overdraft or from other sources.

#### d) Adjusted Profit and Loss Method

In this method, estimated profit is calculated based on transactions of the ensuing period. Thereafter, increase or decrease in working capital is computed adjusting the estimated profit by eash inflows and cash outflows. It is like eash flow statement. A few banks in India use forms for computing working capital under this method. A specimen of such a form is given below.

#### Computation of Working Capital

|                                     | Rs.                                          |
|-------------------------------------|----------------------------------------------|
| Net Income                          | 11314151- 4-41                               |
| Add: (i) Non-eash Items             |                                              |
| Working Capital Provided Operations |                                              |
| Add: (ii) Cash inflow Items         |                                              |
| Lesa: Cash Outflow items            | <u>                                     </u> |
| Net Changes in Working Capital      | <u> </u>                                     |

#### c) Cash Forecasting Method

In this method, estimate is made of cash receipts and payments in the ensuring period. The difference of these receipts and payments indicates deficiency or surplus of cash. The management formulates plans to procure the amount of deficit. This method, in a way, is a form of cash budget.

Example 4.4: Calculate the operating cycle and the working capital requirements from the following figures:

|                                  | Balance as at           | Balance as at             |
|----------------------------------|-------------------------|---------------------------|
| _                                | 1 <sup>st</sup> January | 31 <sup>st</sup> December |
|                                  | Rs.                     | Rs.                       |
| Raw Material                     | 80,000                  | 1,20,000                  |
| Work-in-Progress                 | 20,000                  | 60,000                    |
| Finished goods                   | 60,000                  | 20,000                    |
| Sundry Debtors                   | 40,000                  | 40,000                    |
| Wages and Manufacturing Expenses | - [                     | 2,00,000                  |
| Distribution and Other Expenses  |                         | 40,000                    |
| Purchases of Materials           | -                       | 4,00,000                  |
| Total Sales                      | -                       | 10,00,000                 |

- (i) The Company obtains a credit for 60 days from its suppliers.
- (ii) All goods were sold for credit.

#### Solution:

Computation of Operating Cycle

(i) Material Storage Period:

= Average Stock of Raw Materials

Daily Average Consumption

- (Rs.80,000+1,20,000)/2 Rs.3,60,000/365
- =  $\frac{(Rs.1,00,000)}{Rs.986.3}$  = 101.38 days

Material Consumed = Opening Stock + Purchases - Closing Stock

- = Rs. 80,000 + 4,00,000-1,20,000
- = Rs. 3,60,000
- (ii) Conversion or Processing Period

Average Stock of Work in progress

Daily Average Factory Cost

$$\frac{(Rs 20.000 + 60.000)/2}{Rs 5.20.000/365}$$

$$\frac{(Rs.40,000)}{Rs.1,424.65} = 28.07 days$$

Factory Cost:

Opening Work-Progress
20,000
Material Consumed (as above)
3,60,000
Wages and Mfg. Expenses
2,00,000
5,80,000
Less: Closing Work-in-Progress
60,000

#### (iii) Finished Goods Storage Period

Average Stock of Finished Good
Daily Average Cost of Goods Sold

$$= \frac{(Rs.60,000+20,000)/2}{Rs.5,60,000/365}$$

$$= \frac{(Rs.40,000)}{Rs.1,534.25} = 26.07 days$$

#### Cost of Goods sold

Rs.

| Opening Stock of Finished Goods       | 60,000   |
|---------------------------------------|----------|
| Factory Cost (as above)               | 5,20,200 |
|                                       | 5,80,000 |
| Less: Closing Stock of Finished Goods | 20,000   |
|                                       | 5,60,000 |

#### (iii) Debtors Collection period

$$= \frac{(Rs.40,000+40,000)/2}{Rs.10,000,000/365}$$

$$= \frac{(Rs.40.000)}{Rs.2,739.7} = 14.6 \, days$$

2.

## Computation of Working Capital Required

1. Operating Cycle Period = M+W+F+D-C

= 101.38 +28.07+26.07+14.60-60

5,20,000

= 110.12 or 110 days

Total Cost of Sales

Rs

Cost of Good's Sold 5,60,000 Distribution and other Expenses 40,000

6,00,000

3. Cash Working Capital =  $C + \frac{OC}{N} \times CS$ =  $O + \frac{110}{365} \times Rs.6,00,000 = Rs.1,80,822$  Example 4.5: Mr. Krishan wishes to commence a new trading business and gives the following information:

Working Capital Decisions

The total estimated sales in a year will be Rs. 12,00,000.

His expenses are estimated as fixed expenses of Rs. 2,000 per month plus variable expenses equal to five percent of this turnover.

He expects to fix a sale price for each product which will be 25 percent in excess of his cost of purchase.

He expects to turnover his stock four times in a year.

The sales and purchases will be evenly spread throughout the year. All sales will be for eash and purchases on credit, but he expects one month's credit for purchases.

He keeps cash in hand to meet one month's expenses.

Calculate:

- (a) His estimated profit for the year;
- (b) His average working capital requirements.

#### Solution:

(a)

## Estimated Profit of Mr. Krishan for the year

| Sales                                                             |        | Rs.       |
|-------------------------------------------------------------------|--------|-----------|
| Less: Gross Profit $\left(12,00,000 \times \frac{25}{125}\right)$ |        | 12,00,000 |
| 12,00,000 × 125                                                   |        | 2,40,000  |
| Cost of Goods Sold                                                |        | 9,60,000  |
| Gross Profit (as above)                                           |        | 2,40,000  |
| Less: Expenses:<br>Fixed (2000×12)                                | 24,000 | 84,000    |
| Variable $\left(12,00,000 \times \frac{5}{100}\right)$            | 60,000 | 1,56,000  |

## (b) Statement of Average Working Capital Requirements

| (A) Current Assets:                                                                                   |        | Rs.      |
|-------------------------------------------------------------------------------------------------------|--------|----------|
| (i) Stock                                                                                             | i !    | 2,40,000 |
| (ii) Turnover of Stock is 4 times                                                                     | i i    | , ,      |
| (iii) Stock Turnover = $\frac{\text{Cost of Goods S}}{\text{Average stock at}}$                       | cos t  |          |
| Or $4 = \frac{\text{Rs.9,60,000}}{\text{Rs.9,60,000}}$                                                |        |          |
| Average Stock                                                                                         | .   :  |          |
| So Average Stock = $\frac{\text{Rs.9,60,000}}{4}$ = Rs.2,4                                            | 40,000 |          |
| (i) Cash                                                                                              |        |          |
| To meet fixed expenses                                                                                | 2,000  |          |
| To meet variable expenses                                                                             | 5,000  | 7,000    |
| (12.00.000 5 1)                                                                                       |        |          |
| $\left\{ \left(12,00,000 \times \frac{5}{100} \times \frac{1}{12}\right) \right\}$                    |        | Nil      |
| (ii) Debtors (as all the sales are for eash only)                                                     |        | 2,47,000 |
| (B) Current Liabilities                                                                               |        | 1,00,000 |
| <ul><li>(i) Creditors [1 month/ (12,00,000x1/12</li><li>(ii) Working Capita! Required (A-B)</li></ul> | )]     | 1,47,000 |
| ]                                                                                                     |        | ~        |

Total Purchases = Cost of Goods Sold + Closing Stock

(As it is a new business, there is no opening stock)

= Rs. 9,60,000 + 2,40,000 = Rs. 12,00,000.

Example 4.6: Manckchand Ltd. Plans to seil 30,000 units next year. The expected cost of goods sold is as follows:

|                                             | Rs. (Per units) |
|---------------------------------------------|-----------------|
| Raw Material                                | 100             |
| Manufacturing Expenses                      | 30              |
| Solling Administration And Finance Expanses | 20              |
| Selling Price                               | 200             |

The duration of various stages of the operating cycle is expected to be as follows:

| Raw Material Stage | 2 month  |
|--------------------|----------|
| Work in Progress   | 1 month  |
| Fished Goods Stage | ⅓ month  |
| Debtors Stage      | 1 months |

Assuming the monthly sales level of 2,500 units; estimate the gross working capital requirements if the desired cash balance is 5 % of the gross working capital requirement.

#### Solution:

#### Statement of Gross Working Capital Requirements

| Current | Assets:                                                                                          | Rs.                | Rs.                 |
|---------|--------------------------------------------------------------------------------------------------|--------------------|---------------------|
| (i)     | Raw Material (2 months)<br>(Rs. 2,500×100×2)                                                     |                    | 5,00,000            |
| (ii)    | Work in progress (1 month) Raw material (Rs. 2,500 × 100 × 1) Mfg. Expenses (Rs. 2,500 × 30 × 1) | 2,50,000<br>75,500 | 3,25 (ma)           |
| (iii)   | Finished good (1/2 months) Raw Material (Rs. 2,500×100×5) Mfg. Expenses (Rs. 2,500×30×.5)        | 1,25,000<br>37,500 | 1,62,500            |
| (iv)    | Debtors (1 month)<br>(Rs. 2,500×150×1)                                                           |                    | 3,50,000            |
| (v)     | Cash                                                                                             |                    | 13,62,500<br>71,711 |
|         | of gross working capital i.e., 13,62,500×5/95)  s Working Capital Required                       |                    | 14,34,211           |

#### Working Notes:

- Selling administration and finance expenses are not included in the value of closing stock of finished goods but added in the cost of sales for valuing debtors.
- 2. It is assumed that degree of completion of work-in-progress is 100% as regards materials, labour and overhead and as such material and manufacturing expenses for the full period are included in the cost of work-in-progre

- 3. It is assumed that all sales are credit sales.
- 4. Profit has not been treated as source of working capital hence fully ignored.

## Check Your Progress 3

1) From the following particulars, calculate working capital adding 10% per annum for contingencies.

|                                                                                                            | ·· <del>···········</del>                                                                                                                                                                                                                                                                                     |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |

 M/s. ABC Limited have approached their bankers for their working capital requirements, who have agreed to sanction the same by retaining the margin as under.

| Raw Material     | 20% | Finished Goods | 25% |
|------------------|-----|----------------|-----|
| Stock-in-process | 30% | Debtors        | 10% |

From the following projections for 2004-2005, you are required to work out:

- (i) The working capital required by the company and
- (ii) The working capital limits likely to be approved by bankers Estimates for 2004-2005.

| Annual Sales:                                           | Rs.       |
|---------------------------------------------------------|-----------|
| Cost Production (including depreciation of Rs. 1,20,000 | 14,40,000 |
| Raw Material Purchases                                  | 12,00,000 |
| Monthly Expenditures                                    | 7,05,000  |
| Anticipated Opening Stock of Raw Materials              | 25,000    |
| Anticipated Closing Stock of Raw Materials              | 1,40,000  |
| Inventory norms:                                        |           |
| Raw Materials                                           | 2 months  |
| Work in progress                                        | 15 days   |
| Finished Goods                                          | 1 months  |

The company enjoys a credit of 15 days on it, burchase and allows one-month crudit to its debtors. On sales orders the company has received an advance of Rs. 15,000

You may assume that production is carried out eventy throughout the year and minimum cash balance desired to be mountained is Rs 10,000.

3) Bharat Company Ltd. sells goods in the home market only and earns a gross profit of 25 % on sales. For the year ending 31st Dec; 2005, the following figures are available.

|                                                                                | _ Rs.    |
|--------------------------------------------------------------------------------|----------|
| Material used                                                                  | 1,12,500 |
| Wages paid                                                                     | 90.000   |
| Manufacturing expenses (including depreciation                                 | 1,35,000 |
| Administrative expenses                                                        | 30,000   |
| Depreciation                                                                   | 15,000   |
| Sales promotion expenses                                                       | 15,000   |
| Income Tax payable in four installments which falls in the next financial year | 37,500   |
| Sales                                                                          | 4,50,000 |

#### Other particulars are

- 1. Suppliers of materials provide two month's credit;
- 2. Wages are paid half month in arrear;
- Manufacturing and administrative expenses are all cash expenses and are paid one month in arrear;
- 4. Sales promotion expenses are paid quarterly in advance;

Wages and overhead accrue similarly and a time period of 4 weeks and 52 weeks is equivalent to a month and a year respectively.

## 4.8 SUMMARY

Financial decisions are based on certain considerations the main being the cash flows, cost and liquidity. Short-term financial decisions or working capital decisions are different with regard to quantum and frequency of cash flows. There are two concepts of working capital:

- (i) Gross Working Capital
- (ii) Net Working Capital.

The main characteristic of the current asset is that they change their form within one operating cycle. Working capital requirement is influenced by a variety of factors, the main among them is nature and size of business. There are various methods of calculating working capital requirement. In some the base figures are obtained from financial statements.

# 4.9 SELF-ASSESSMENT QUESTIONS/EXERCISES

- 1. Explain the concept of working capital. Are gross and net concepts of working capital exclusive? Discuss.
- 2. What is the importance of working capital for a manufacturing firm? What will be the repercussions if a firm has (a) paucity of working capital (b) excess working capital?
- What is the concept of working capital cycle? What is meant by cash
  conversion cycle? Why are these concepts important in working capital
  management? Give an example to illustrate your point.
- 4. Briefly explain factors that determine the working capital needs of a firm.
- 5. How is working capital affected by (a) Sales, (b) Technology and Production Policy, and (c) Inflation? Explain.
- 6. Define working capital management. Why is it important to study the management of working capital as a separate area in financial management?
- Do you recommend that a firm should finance its current assets entirely with short term financing? Explain your answer.
- 8. What methods do you suggest for estimating working capital needs? Illustrate your answer.
- 9 Explain the difference between Gross and Net Working Capital.
- 10. What is the operating cycle concept of working capital?
- 11. State the difference between fixed and variable working capital.
- 12. How is working capital affected by the nature of business?
- 13. Why is excess working capital dangerous?
- 14. Explain the concept of working capital. What are the constituents of working capital of a company?
- 15. What is operating cycle concepts or working capital? How will you determine the amount of working capital under this method? Explain with examples?

- 16. "Inadequate working capital is disastrous whereas redundant working capital is a criminal waste". Critically examine this statement.
- 17. What is the concept of "Working Capital"? What factors determine the needs of working capital and how is it measured?
- 18. What is meant by working capital forecasting? Briefly explain the techniques used in making such forecasts.
- 19. Write short notes on the following:
  - (i) Operating Cycle of Working Capital
  - (ii) Types of Working Capital

### **Practical Questions**

 The following data has been taken from the financial records of Meenakshi Company Ltd.

| Raw Material  | Rs. 40 per units     |
|---------------|----------------------|
| Direct Labour | Rs. 20 per unit      |
| Overheads     | Rs. 5,40,000 (Total) |

The following additional information is also available:

- The management of the company is planning to manufacture 1,00,000 units in the coming year. The selling price per unit will be Rs. 125. There is perfect harmony between output and sales of the Company, which is maintained throughout the year.
- 21. The average storage period is 40 days for raw material and 30 days for finished goods.
- The company sells goods to its customer on 30 days credit and purchase raw material on 60 days credit from its suppliers.
- The duration of the production cycle in the Company is 20 days and the needed raw material is issued to the production at the beginning of each production cycle.
- 5. 20% of the average working capital is kept as extra cash for contingencies.

Assume 360 working days in the operating period, work out an estimate of the total requirements of working capital for the Company using Operating Cycle Method.

From the following data, compute the duration of the operating cycle and working capital requirements for each of the two years:

| Average Stocks:    | Year 1 (Rs.) | Year 2 (Rs.) |
|--------------------|--------------|--------------|
| Raw Material       | 20,000       | 27,000       |
| Work-in-progress   | 14,000       | 18,000       |
| Finished Goods     | 21,000       | 24,000       |
| Purchase           | 96,000       | 1,35,000     |
| Cost of Goods Sold | 1,40,000     | 1,80,000     |
| Sales              | 1,60,000     | 2,00,000     |
| Debtors            | 32,000       | 50,000       |
| Creditors          | 16,000       | 18,000       |

Assume 360 days per year for computational purposes.

Forecasting Net Current Assets Methods

3. From the following information, you are required to estimate the working capital requirements of Mahesh Ltd.

| Raw Material Cost           | 0.75 per units         |
|-----------------------------|------------------------|
| Overheads                   | Rs. 15,000 per annum   |
| Labour                      | 581/2 p. per unit      |
| Output and Sales            | 10,000 units per month |
| Selling Price               | Rs, 5.00 per unit      |
| Buffer Stocks to be carried |                        |
| Raw Materials               | 2 weeks production     |
| Finished Goods              | 3 weeks supply         |

The debtors on an average take 2.25 month's credit. Raw Material is received in uniform deliveries daily and suppliers have to be paid at the end of the month when goods are received. Other creditors for overheads allow on an average 1½ months credit. Calculate the working capital required for February in the form, for presentation to the Board. For this purpose, you may assume that a month is a four-week period.

4. The Board of Directors of ABC Engineering Company Ltd. requests you to prepare a statement showing the working capital requirements forecast for an expected level of production of 22,000 tonnes. The following information is available for your computation.

| Raw Material to remain in stock on an average | 4 weeks    |
|-----------------------------------------------|------------|
| Processing Material in process                | 2 weeks    |
| Permanent Material in process                 | 200 tonnes |
| Finished Goods in Stock                       | 6 weeks    |
| Credit allowed to Customers                   | 8 weeks    |
| Expected ratio of material to sale price      | 72%        |
| Wages and Overheads                           | 22%        |
| Selling Price per ton                         | Rs. 3,000  |

5. Prepare a working capital forecast from the given below information:

| Issued Share Capital | Rs. 4,00,000 |
|----------------------|--------------|
| 6% Debentures        | Rs. 1.50,000 |
| Fixed Assets         | Rs 3,00,000  |

Production during the previous year is 1-lac units. The same level of activity is intended to be maintained during the year. The expected ratios of cost to selling prices are:

Raw materials 50% Direct Wages 10% Overheads 25%. The inventory holding norms are as under:

| Raw Material     | 2 month's Consumption        |
|------------------|------------------------------|
| Stock-in-process | 2 month's cost of production |
| Finished Goods   | □ month's cost of sales      |

Besides sundry Crecitors and Sundry Debton, are equivalent to 3 month's purchases and 3 months sales respectively. Self-by price is Rs. 6 per unit. Both production and sales are in regular cycle and wages and overhead accrue evenly.

6. The Board of Directors of Nanak Engineering Company Private Limited requests you to prepare a statement showing the working capital requirements forecast for a level of activity of 1,56,000 units of production. The following information is available for your calculation:

| 73.           | <del></del> |
|---------------|-------------|
| Raw Micerial  | 90          |
|               | 49          |
| Overheads     | 75          |
|               | 205         |
| Profits       | 60          |
| Selling Price | 265         |

- 1) Raw Materials are in stock on an average for one month;
- Materials are in process on an average two weeks;
- Finished goods are in stock on an average one-month;
- Credit allowed by suppliers one month;
- Time lag in payment from debtors two months;
- 6) Lag in payment of wages is 1 1/2 weeks; and
- 7) Lag in payment of overheads is one month

20% of the output is sold against cash. Cash in hand and at bank is expected to be Rs. 60,000. It is to be assumed that production is carried on evenly throughout the year, wages and overheads accrue similarly and time period of 4 weeks is equivalent to a month and 52 weeks a year.

7. The following data is available from the cost sheet of a Company.

Cost per unit

| Raw Material                                | <del></del> |
|---------------------------------------------|-------------|
|                                             | 50          |
| Direct Labour                               | 20          |
| Overhead (including depreciation of Rs. 10) | 40          |
| Total Cost                                  | 110         |
| Profit                                      | 110         |
| Selling Price                               |             |
| John Elifet                                 | 130         |

## Additional information:

Average raw material in stock is for one month. Average material in progress is for half month. Credit allowed by suppliers is one month, credit allowed to debtors is one month. Average time lag in payment of wages: 10 days; average time lag in payment of overheads 30 days. 25% of the sales are on cash basis. Cash balance expected to be Rs. 1,00,000. Finished goods lie in the warehouse for one month.

You are required to prepare a statement showing the working capital needed to finance a level of the activity of 50,000 units of output. Production is carried out evenly throughout the year and wages and overheads accrue similarly. State your assumptions if any, clearly.

# 4.10 SOLUTIONS / ANSWERS

## Check Your Progress 1

#### Solution 4

# Computation of Operating Cycle

| I. | Operating Period                   | Y3   |
|----|------------------------------------|------|
|    | (i) Raw Material Storage Period    | Days |
|    | (i) Raw Material Storage Period    | 30   |
|    | (ii) Finished Stock Storage Period | 15   |
|    | <del>-</del>                       | , ,  |

|          | <ul><li>(iii) Processing or Conversion Period</li><li>(iv) Debtors Collection Period</li></ul>                                                      |          | - 30<br>60                                        | Working Capital<br>Decisions |
|----------|-----------------------------------------------------------------------------------------------------------------------------------------------------|----------|---------------------------------------------------|------------------------------|
| Less:    | Creditors Payment Period                                                                                                                            |          | 135<br>40<br>95                                   |                              |
| 2.<br>3. | Number of Operating Cycle per year<br>Total Operating Expenses<br>Raw Material (1,00,000 × 10)<br>Labour (1,00,000 × 4)<br>Overheads (1,00,000 × 4) | 365/95 = | 3.842<br>Rs.<br>10,00,000<br>4,00,000<br>4,00,000 |                              |

4. Working Capital = 
$$\frac{\text{Total Operating Expenses}}{\text{No. of Operating Cycles}}$$
$$= \frac{\text{Rs.18,00,000}}{3.842 \text{ or } 365/95}$$

Add: 1/3 for Contingencies 4,68,493 1,56,164

Total Working Capital Required 6,24,657

Alternatively

$$WC = C + \frac{OC}{N} \times CS$$

$$= 0 + \frac{95}{365} \times 18,00,000 = 4,68,493$$

Add: 1/3 for Contingencies = 1,56,164

6,24,657

#### Solution 2:

## Computation of Operating Cycle Period

1. Material Storage Period

Conversion Period 2.

> AverageStock of work - in - progress Daily Average Production Cost

$$\frac{Rs.35,000}{Rs.10,00,000/365} = \frac{35,000}{2,739,73} = 13 days$$

3. Finished Goods Storage Period

> Average Stock of Finished Goods Daily Average Cost of Sales

$$\frac{Rs.26,000}{Rs.10,50,000/365} = \frac{26,000}{2,876.7} = 9 \text{ days}$$

## 4. Debtors Collection Period:

$$= \frac{Rs.48,000}{Rs.16,00,000/365} = \frac{48,000}{4,383.56} = 11 days$$

- 1. Operating Cycle Period Days
  (i) Material Storage Period 27
  (ii) Conversion Period 13
  (iii) Finished Goods Storage Period 9
  (iv) Debtors Collection Period 11/60
  Less: Creditors Payment Period 16/44
- Number of Operating Cycle Per year 365/44 8.3
- 3. Total Operating Expenses Rs. 10,50,000
- 4. Working Capital Required =  $\frac{\text{Total Operating Expenses}}{\text{No. of Operating Cycles in a Year}}$  $= \frac{\text{Rs. 10,50,000}}{\text{Rs. 8.3}}$ = Rs. 1,26,506

## Alternatively

$$WC = C + \frac{OC}{N} \times CS$$

$$= 0 + \frac{44}{365} \times Rs. 10,50,000$$

$$= Rs. 1,26,575$$

Note: A little difference between the two methods is due to approximation.

### Check Your Progress 2

#### Solution 1:

## Statement Showing Working Capital Requirements

| (A) | Current Assets:                           | Rs.   | Rs.    |
|-----|-------------------------------------------|-------|--------|
|     | (i) Stock of Raw Materials (4 weeks).     |       | 3,209  |
|     | (ii) Work in process (2 weeks):           |       | !      |
|     | Raw Materials (Rs.800 × 2)                | 1,600 |        |
|     | Lucour (Rs. 200×1)                        | 200   | 1      |
|     | Overheads (Rs.600×1)                      | 600   | 2,400  |
|     | (sii) Stock of finished Goods (6 weeks):  |       |        |
|     | Raw Materials (Rs.800 × 6)                | 4,800 |        |
|     | Labour (Rs 200 × 6)                       | 1,200 |        |
|     | Overheads (Rs.600×6)                      | 3,600 |        |
|     | (                                         | į     | 9,60   |
|     | (iv) Debtors (8weeks):                    | ·     |        |
|     | Raw Materials (Rs.800 × 8)                | 6,400 | 1      |
|     | Labour (Rs.200 × 8)                       | 1.600 | 12,809 |
|     | Overheads (Rs.600 × 8)                    | 4.800 | 7,304  |
|     | (v) Cash as per estimate                  |       | 35,304 |
|     | (B) Less: Current Liabilities:            |       |        |
|     | (i) Creditors (4 Weeks)                   | 3,200 | İ      |
|     | (ii) Lag in payment of wages (112 Weeks): |       | İ      |
|     | Labour (Rs.200 × 1 <sup>1/2</sup> )       | 300   | 1 .    |
|     | Working Capital Required (A-B)            | !     | 31.57  |

### Working Notes:

Working Capital Decisions

(1) Weekly amount of each element of costs calculated as follows: Total Sales for of the year =  $5,200 \times Rs.20 = Rs.1,04,000$ 

(i) Raw Material = 
$$\frac{1,04,000}{52 \times 20}$$
 = Rs. 800

(ii) Direct Labour = 
$$\frac{1,04,000 \times 2}{52 \times 20}$$
 = Rs. 200

(iii) Overhead = 
$$\frac{1,04,000 \times 6}{52 \times 20}$$
 = Rs. 600

### Alternative Method

Annual Production = 5,200 units

Weekly production = 5,200/52 = 100 units

Material =  $100 \times Rs.8 = Rs.800$ 

Labour =  $100 \times Rs.2 = Rs.200$ 

Overhead =  $100 \times Rs.6 = Rs.600$ 

- (2) Debtors are calculated at cash cost of sales.
- (3) It has been assumed that material is issued at the commencement in each production cycle, but labour and overheads are incurred in the process of production. Therefore, half of the amount (one week) is invested in the process.
- (4) Profit may be or may not be a source of working capital. Payment of Income Tax and Dividend are adjusted in these profits, therefore, profits have not been considered.

#### Solution 2

Computation of Net Working Capital

| (A) | Current Assets                                   | Rs.      | Rs.       |
|-----|--------------------------------------------------|----------|-----------|
|     | (i) Stock of raw Materials (6 weeks)             |          |           |
|     | (Rs. $52,000 \times 200 \times 6/52$ )           |          | 12,00,000 |
|     | (ii) Work-in-progress (2 weeks)                  |          |           |
|     | Raw Materials (Rs.52, 000 × 200 × 2/52)          | 4,00,000 |           |
|     | Direct Labour (Rs.52,000 × 100 × 1/52)           | 1,00,000 |           |
|     | Overheads (Rs.52, $000 \times 250 \times 1/52$ ) | 2,50,000 | 7,50,000  |
|     | (iii) Stock of Finished Goods (4 weeks)          |          |           |
|     | $(52,000 \times 800 \times 4/52)$                |          | 22,00,000 |
|     | (iv) Debtors (6 weeks)                           |          |           |
|     | (52,000×800×6/52)                                |          | 48,00.000 |
|     | (v) Cash at Bank                                 |          | 75,000    |
|     |                                                  |          | 90,25,000 |
| (B) | Current Liabilities                              |          |           |
|     | (ii) Creditors (4 Weeks)                         |          |           |
|     | (iii) $(52,000 \times 400 \times 4/52)$          |          | 8,00,000  |
| (c) | Net Working Capital (A-B)                        |          | 82,25,000 |

#### Working Notes:

- (i) Debtors are taken at selling price as the amount of net working capital is to be calculated. If working capital requirements are to be calculated, then debtors should be taken at cash cost,
- (ii) It is assumed that there is no time lag in payment of overheads.

## Check Your Progress 3

Solution 1

## Computation of "Working Capital Requirements"

| (A) Current Assets                         | Rs.   | Rs. |
|--------------------------------------------|-------|-----|
| (i) Stock of Material and Stores           |       |     |
| (ii) Stock of finished Goods               |       |     |
| (iii) Books Debts (a) Home (62,400×6/52)   | 7,200 |     |
| (b) Foreign $(15,600 \times 1.5/52)$       | 450   |     |
| (iv) Advance Payment (1,600 × 3/12)        |       |     |
| (B) Current Liabilities                    |       |     |
| (i) Creditors for Stores and Materials     |       |     |
| (9,600×1.5/12)                             |       |     |
| (ii) Outstanding expenses:                 |       |     |
| Wages (52,000×1.5/52)                      | 1,500 |     |
| Office Salaries (12,480 × .5/12)           | 520   |     |
| Rent (2,000×6/12)                          | 1,000 |     |
| Other Expenses (9,600 × 1.5/12)            | 1,200 |     |
| O Net Working Capital (A-B)                | 5,420 |     |
| Add: 10% Contingency Allowance             | 5,230 |     |
| Average amount of working Capital required | 523   |     |
|                                            | 5,753 |     |

### Working notes:

- (i) For calculation purposes, 52 weeks or 12 months in a year are assumed.
- (ii) In the absence of cash cost of current assets, the actual working capital will differ from that of amount computed above.

### Solution 2

## (i) Statement Showing Working Capital Requirements

| (A) Current Assets |                                     | Rs.      | Rs.      |
|--------------------|-------------------------------------|----------|----------|
| (i)                | Cash Balance                        |          | 10,000   |
| (ii)               | Stock of Raw Materials (2 months)   |          |          |
|                    | (Rs. 7,20,000×2/12)                 |          | 1,20,000 |
| (iti)              | Stock of Work-in-progress (15 days) |          |          |
|                    | (Rs. 10,80,000×.5/12)               |          | 45,000   |
| (iv)               | Stock of Finished Goods (Imonths)   |          |          |
|                    | (Rs. 10,80,000×1/12)                |          | 90,000   |
| (v)                | Debtors (I month)                   | ]_       |          |
|                    | (Rs. 10,80,000×1/12)                | !        | 90,000   |

|    | Working Capital Likely to be approved by Bankers. |                          |                 | 2,76,000                   |

## Working Notes:

| Rs. |  |
|-----|--|
|     |  |

| A  | Calculation of raw material consumed: |           |
|----|---------------------------------------|-----------|
|    | Opening Stock of Raw Material         | 1,40,000  |
| }  | Add: Purchases                        | 7,05,000  |
|    |                                       | 8,45,000  |
|    | Less: Closing Stock of Raw Material   | 1,25,000  |
|    | Annual Consumption                    | 7,20,000  |
| В  | Cash cost of annual production        | Rs.       |
|    | Cost of production as given           | 12,00,000 |
| li | Less: Depreciation                    | 1,20,000  |
|    |                                       | 10,80,000 |

(iii) It is assumed that there is neither opening stock of finished goods nor closing stock. Hence, cost of sales is taken to Rs. 10,80,000 after deducting depreciation.

## Solution 3

| Α | Cur      | rent Assets                                           | Rs.    |
|---|----------|-------------------------------------------------------|--------|
|   | (i)      | Debtors (cash cost of goods sold i.e. (3,67,500×2/12) | 30,625 |
|   | (ii)     | Prepayments: Sales Promotion Expenses (15,000×3/12)   | 3,750  |
|   | (iii)    | Stock of Raw Materials (Rs. 1,12,500×1/12)            | 9,375  |
|   | (iv)     | Stock of finished good (Rs. 3,22.500 × 12)            | 26,875 |
|   | (V)_     | Cash in hand                                          | 25,000 |
|   |          | Total                                                 | 956,25 |
| В |          | Current Liabilities                                   |        |
|   | (i)      | Sundry Creditors (Rs. 1,12,500×2/12)                  | 18,750 |
|   | (ii)_    | Outstanding Expenses:                                 |        |
|   | ļ        | (a) Wages (Rs. 90,000×5/12)                           | 3.750  |
|   | <u> </u> | (b) Mfg. Expenses (Rs. 1,20,000 x 1/12)               | 70,000 |
|   | <u> </u> | (c) Administration Expenses (Rs. 30,060 × 1 x2)       |        |
|   | (iii)    | Bank Overdraft                                        | 2:,    |
|   |          | Total                                                 | 47.50  |
| C | <u> </u> | Net Working capital Required (A-B)                    | 48.105 |

#### Working Notes:

## (i) Cash Cost of Production and Total Cost is Calculated as under:

|                                   | Rs.      |
|-----------------------------------|----------|
| Sales                             | 4,50,000 |
| Less: Gross Profit @ 25% on sales | 1,12,500 |
|                                   | 3,37,500 |
| Less: Depreciation                | 15.000   |
| Cash Production Cost              | 3,22,000 |
| Add: Administration Expenses      | 30,000   |
| Sales Promotion Expenses          | 15,000   |
| Total Cash Cost                   | 3,67,500 |
| Or                                |          |
| Material Consumed                 | 1,12,500 |
| Wages Paid                        | 90.000   |
| Cash Mfg. Expenses                | 1,20,000 |
| Cash Production Cost              | 3,22,500 |
| Add: Administration Expenses      | 30,000   |
| Sales Promotion Expenses          | 15,000   |
| Total Cash Cot                    | 3,67,500 |

- (ii) Debtors have been calculated at cash cost.
- (iii) Income tax has been ignored because profits are not treated as source of working capital, while income tax is paid out of profits.

### Solution 4

#### Computation of Working Capital Requirement

| Λ       | Curr  | ent Assets:                                                 | Rs.       |
|---------|-------|-------------------------------------------------------------|-----------|
|         | (i)   | Stock of Materials (1 months)<br>(1.04,000 × 80 × 4/52)     | 6,40,000  |
|         | (ii)  | Work-in-progress (1/2 months)                               |           |
|         | 1     | Materials Cost (1,04,000 × 80 × 2/52)                       | 3,20,000  |
|         |       | Labour Cost (1,04,000 × 30 × 1/52)                          | 60,000    |
|         |       | Overheads (1.04,000 × 60 × 1/52)                            | 1,20,000  |
|         | (iii) | Finished Goods (1 months)                                   |           |
|         |       | Material Cost (1,04,000 × 80 × 4/52)                        | 6,40,000- |
|         |       | Labour Cost (1.04.000 × 30 × 4/52)                          | 2,40,000  |
| <u></u> |       | Overheads (1,04,000 × 60 × 4/52)                            | 4,80,000  |
|         | (iv)  | Debtors (2 months)                                          | 20,49,000 |
|         |       | (78,000×70×8/52)                                            | 30,000    |
|         | (v)   | Cash Balance                                                | 45,70.000 |
| В       |       | Current Liabilities                                         |           |
|         | (i)   | Creditors for Material (1 months)                           |           |
|         |       | $(1,04,000 \times 90 \times 4/52)$                          | 6,40,000  |
|         | (ii)  | Outstanding Expenses                                        |           |
|         |       | (a) Overheads (1 months) $(1.04,000 \times 60 \times 4/52)$ | 4,80,000  |
|         | 1     | (b) Wages (2 weeks) (1,04,000 × 30 × 2/52)                  | 1.20,000  |
|         |       | <u> </u>                                                    | 12.40,000 |
| C       | L     | Estimated Requirements of Working Capital (A-B)             | 33,30,000 |

## Working Notes:

- (ii) 25% of production i.e 26,000 units are sold for cash. Hence credit sales are 78,000 units. The cash cost of debtors is calculated on these units.
- (iii) It is assumed that full material is issued in the beginning and labour and overhead accrue evenly. Therefore, their 50% (one week) amount is included in WIP.
- (iv) Profit on each as well as on credit sales may or may not be the source of working capital. Income tax and dividends paid are to be adjusted from these profits. Hence, profits are ignored.
- (v) All the overheads are assumed to be variable. Working capital will be reduced by the amount of depreciation. In absence of these data, estimates cannot be accurate.
- (vi) It is assumed that stock of raw material and finished goods is maintained on the basis of goods produced.
